Lay the chosen ears in a row. Take one kernel from each end and one from the center. Turn over and do the same on the other side. Place at the end of ear from which taken. Do likewise with each ear, being careful not to mix the kernels. Place the kernels in a sprouting box, marking so that you know where each six kernels belong. Leave the ears as they are. After the corn is sprouted, compare your test with their respective ear, and if the germination is not satisfactory discard that ear. When through shell the corn and run through a corn grader. This will place the best kernels of uniform size and shape by themselves. The grader will separate the corn into several grades. The first and second grades only, should be used for planting. By planting the first grade only the kernels are of the same size and a uniform stand can be easily secured. The second grade should be kept for future use in case replanting is necessary.

Carefully test the planter or drill before taking to the field, so as to know that it drops properly. As soon as the corn is up, begin to work it, being careful not to cover any. Work as often as possible. All deep cultivating should be done while the corn is small so as to not injure the rootlets.

The last cultivation should not ridge the row much, and must be shallow so as to not injure the roots. Let your last cultivation be when the corn begins to break, as it passes under the arch of the cultivator. No crop shows the benefits of good cultivation or pays better on the ordinary farm, than corn. Some farmers claim that a good man and team produce $20 to $25 worth of corn daily by the last cultivating. So do not lay the corn by, too soon, but keep at it until it is necessary to quit. Subscriber.

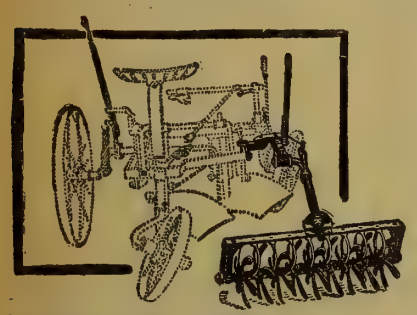
Preparing an excellent seed bed—all accomplished in one operation and by one man and a Hackney tractor.

MAKING PLANS FOR THE FUTURE.

To the Editor of The Homestead:

It is well, and indeed helpful, for every farmer to study the season with reference to his work. It means the difference between driving and being driven. Business men have learned the necessity of buying stock and planning their business with reference to the season. If farmers are to systematize their work and put their farms on a business basis, right now is the time to lay plans for the season's work. In a general way every farmer understands that he must plant in the spring, cultivate in the summer and harvest in the fall, but there are more definite distinctions that should be considered in his calculations. There is always an economical time for doing certain things on the farm, and there are times when the doing of certain kinds of work conflicts with other work.

Get a memorandum book right away. If the country store does not keep a good, large one—two or three pages for each week in the year—send to the city. "Nonsense, not practical," you say; "we are not prophets." Quite true, but the seasons are before you. You have formed a general idea of the big things of the year. You know the things



NATIONAL ROTARY HARROWS FOR PLOWS

It will surprise you to know the low price that we are quoting the first ten farmers in each township on our famous Rotary Harrows for Plows, to quickly introduce them. We refund the purchase price and pay freight charges if not satisfactory. 75,000 in use and sales doubling each season. Pays for itself on first five acres plowed. Guaranteed to increase yield twenty per cent. The new way of harrowing as you plow proved to the farmers last season that it saves time, labo and money in preparing the seed bed. Write us today for special introductory prices and circulars.

NATIONAL HARROW CO. LEROY, ILLINOIS

THE WEBBER ANGLE SIEVE

Grain Separator and Fanning Mill

Something new — is a little wonder, produces seed grain, separates grain, cleans it and grades it, besides doing work of ordinary fanning mill. Makes perfect separation once through. Write for prices to

HIRSCH BROTHERS
272 Reed St., Milwaukee, Wis.

MEN WANTED!

SOUND men 21 to 40 years old wanted at once for electric railway motormen and conductors in every state. Wages $60 to $100 a month. Experience unnecessary. Permanent employment, no strike. Write immediately for application blank. Address Manager Employment Department, Room 950, Dwight Building, Kansas City, Missouri.

AGENTS Our absolutely square $30.00 to $67.50 weekly salary and 30% commission proposition assures steady workers unfailing success.

Wm. R. Petticrew, Mgr., Box 360 EE, Waterloo, Ia.

CIVIL SERVICE examinations open the way to good government positions. I can coach you by mail at small cost. Full particulars free to any American citizen of eighteen or over. Write today for Booklet O-1143. Earl Hopkins, Washington, D. C.

DRAINAGE WITHOUT DITCHES

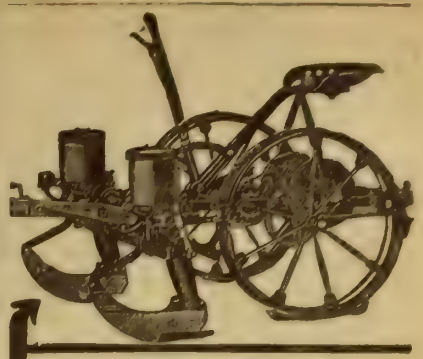
YOU can drain your land without digging a ditch. Write for circular at once.
VERTICAL DRAINAGE CO., Clinton, Iowa.

AGENTS WANTED—Farmers' Directory. Account Book. Exclusive home territory. Quick seller. Big inducements. Particulars free. Write Naylor 945, Ft. Wayne, Indiana.

Columbian Stock Powder

GUARANTEED to be all right and in good condition; am closing out 100-lb. keg, $5; 250-lb. barrel $11. Booklet free. E. E. Arnold, Sandwich, Ill.

PATENTS that PAY $561,530 made by clients. Patent Book—"What & How to Invent—Proof of Fortunes in Patents" FREE. 112-p. Guide Free! E. E. VROOMAN, Patent Atty., 812 F St., Washington, D. C.



Mix Brains With Your Planting!

Use your head and get two to ten bushels more per acre and without any more expense or work. You can now do it because of an invention by which you can change the number of seed to the hill instantly. You don't have to stop. You don't have to get out of your seat. You simply pull a lever and it's done.

When you come to the richer parts of your field you shoot an extra kernel or two into each hill. And when you come to thin soil you plant less grains per hill. Thus you waste no seed and you make the richest soil raise the most corn. Besides, the poorer soil makes more and better ears if you don't overload it. This is scientific and right.

And it's just as easy and fast as ordinary planting. No extra work—just use your head.

Rock Island No. 1 Corn Planter

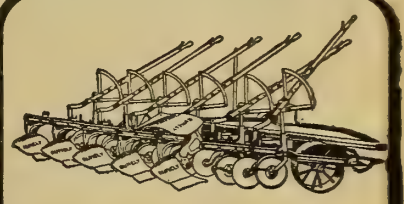
This planter is also instantly changeable from edge to flat drop. Both plates furnished free. It plants straight, even rows, whether horses walk fast or slow. Positive clutch that's absolutely trouble-proof and that outwears four ordinary clutches. Special flexible connection to front frame makes uniform planting certain, no matter how hilly your land. Adjustable width. Adjustable seat. Discs or runners. 30 or 36-inch concave, flat or open wheels.

It's the masterpiece machine of corn-planter construction. Has become the sensation of the Corn Belt in three seasons. Over 10,000 machines now in use and all doing wonderful work! More than pays for itself in one season.

WRITE! Drop us a postal at once and you will receive our latest Corn Planter Book and a copy of Prof. Holden's famous book on Corn Growing—ALL FREE! We will tell you where you can see a Rock Island No. 1.

Simply write this on your postal: "Am interested in the Rock Island No. 1 Planter." Then add your name and address and send the card to

Rock Island Plow Co.
183A Second Ave., Rock Island, Ill.



The "LightPull" Plow

Strength, compactness, flexibility, light draft, low cost of up-keep, easy operation, easy adjustment, large capacity and ability to do good work at any depth are all combined in the

Rumely Engine Gang Plow

In 1910, at the Winnipeg Motor Competition, an 8-bottom plow of this type showed the lightest draft of any engine gang plow. In 1911 at Winnipeg the 6-bottom plow averaged 633.3 pounds draft for a 14-inch furrow against an average of 726 pounds for all competing makes. Two Silver Medals in 1912.

We have sizes for all tractors—bottoms and coulters for all soils.

If you want the best power for your plow choose the OilPull, GasPull or any of the Rumely "Pull" family.

Our Data-book on plowing is worth having—send for it—ask for No. 338. Get the name of our nearest dealer, too.

that must be done as well as the things you contemplate doing. If your brood mares are to have colts you know that your team work ought to be planned so that you can spare their services at that particular time. You should know when the calves, pigs and lambs are to arrive so that if you are called away suddenly you can leave them in charge of a competent man, or if you are at home you can make plans for their reception.

If you are going to build or repair your buildings in the spring you can plan to haul your material before the roads are soft and before the farm work demands the services of the men and teams. As a general thing the springtime, immediately after sowing and planting is the ideal time to build or repair farm buildings. Many farmers who have delayed this work until late in the fall will agree with this advice. At this season the days are long and pleasant, the mechanics are not crowded with work and if one is handy with tools himself he can plan the building so that much of the inside work can be done at times when the weather is unfavorable for outside work. If the building is to have a foundation, as is the case with a house or dairy barn, there is no fear about the cold weather damaging the mortar. One of the most serious mistakes the writer ever made in building was that of beginning to remodel a dairy barn late in the month of October. The weather turned cold unusually early and for almost two weeks it was necessary to work to a great disadvantage with the cows in the stable and the workmen pinched up with the cold. On account of being rushed by the cold weather and the lack of time a large part of the pipe fitting and plumbing had to be done over again the next year.

Years ago farmers never thought of getting the manure on the land during the winter, but we know now that winter is the time to get out the manure which is made during that season. As soon as the spring's work begins there are other things that demand attention. A manure spreader can be furnished with lugs so that they can be drawn upon the snow and have enough grip to enable them to unload in the proper manner. Of course, there may be days when the snow and weather defeat our plans, but such brief spells need not defeat a man who has a purpose in his work. The manure spreader will do more efficient work with manure fresh from the stable than it will with that from a heap that is frozen so that it comes up in huge chunks that cannot be broken up and scattered properly.

Plans should be made to grow young stock during the winter when they can have better care than during the rush of work in the spring and summer months. Young colts and calves that are properly fed and cared for during the winter months are ready to go out in the pasture as soon as the grass becomes somewhat hardened along in June. When we come to the smaller kinds of stock, such as lambs, pigs and chickens, plans must be made to have them come as early as consistent with the seasons and our conveniences for handling them when they arrive.

As you consult your plans for the coming season's work you will find yourself continually making notes in your "week by week" book, and what is more to the point, studying it ahead. A farm run on schedule time is a joy, and it can be done more easily than you think.

One of the most valuable features of this "week by week" book is that the slack times as well as the busy times are pointed out ahead. Many bits of work that can be done a few days or a few weeks ahead of time can be done during the slack season. The work for the whole year is done easier, with less anxiety, less rush, less expense and more profit if these odd jobs are done a few days or even a few months before they demand immediate attention, instead of a few days or more behind time as is so commonly the case when the farm is managed on a short-sighted schedule. Even the most industrious of men will fall far short of their possible accomplishments unless the entire farm is managed on a systematic basis. This system must be planned to furnish steady profitable work for the men and equipment every week day during the year. It is the man with the faculty of keeping everything going along steadily and smoothly that gets his work completed on schedule time. It is not spasmodic effort to do two day's work in one and drive the men and teams beyond their strength, but the big average that counts most at the end of the year. The odd minutes, hours and days saved now and again tell mightily in summing up the results of the year's work.

Another advantage of making plans for the year's business is the fact that it gives up an opportunity to figure the cost of labor, seeds, fertilizers, machinery and various other items and plan our year's business according to our finances. It is almost as important to know what next year's expenses are likely to be as it is to know what the past year's income amounted to. By carefully going over our plans and estimating the cost of the things needed for the coming season's activities it is possible to plan our business so that every dollar invested will add to the permanent value of the farm or increase the efficiency of the organization.

W. Milton Kelly.

Echoes From a Kansas Farm

BY HENRY HATCH

The more sales there are, it seems, the higher stuff sells. This does not mean just a few certain things, but all things sold. We have seen stuff sold lately, like machinery, harness and small tools, that have seen two or three years use, sell for the price of new goods of the same quality. Surely such purchasing is not good for the buyers.

We are in need of more pasture on this farm than we have, hence our object in sowing timothy and clover on fifteen acres of land that was in corn last year. Were we after hay alone we would not care so much about the timothy, although it helps.

There is a lot of land in this corner of the corn belt that needs something besides the overdose of corn growing it has been getting for the last twenty or thirty years. Rented farms, especially, are producing less each year because the fertility is being drained right out of the soil by continual corn growing and a system of farming that puts nothing back into the soil to replace what is taken out.

The cattle feeders here are glad to see the advance of thirty-five to fifty cents that has taken place in the price of fat steers, the past week. They hope prices will keep right on advancing, for some now realize they bought their feeders rather high, there being, in some cases, still much less than a dollar spread between what they paid for the feeders and what the finished product would now sell for. One cannot produce gain in weight and sell it at the same price per pound paid for the feeders.

The women folks are now talking over the phone about trimming lamps, thermometers, turning the eggs and airing them. The reader can quickly guess what is on the mind of these madams. Dates when the various incubators of the neighborhood are to "come off" are carefuly remembered, and the next day after everyone will be asking "what luck."

It is still too early to burn to kill chinch bugs. Investigation shows that most of the bugs are beneath the surface, down in the soil, and fire now would pass over them without harm, and more than likely the freezes we would have from this on would be insufficient to kill them, even with the trash protection burned. It is better to wait until the weather thaws the bugs out and brings them out in the grass; fire then, before they take wing, will leave none behind.

Every now and then someone wants a law passed prohibiting the use of the common narrow-tired wagon on public highways. There is no denying the fact that narrow tires do make ruts when the grade is soft, but at such a time wide tires would add another team to the draft for the load, and they too would make ruts—not quite so deep, perhaps, but a great deal wider. We have used wide tires on feed wagons for a number of years, but do not get out on the roads with them unless all is smooth and the roadway is hard. When the soil will "pick up," it is surprising how much of it will stick to broad tires.

THE HIGH COST OF LIVING.

An attack on the high cost of living was begun in the Wisconsin house when speaker Hull, aiming to bring together farmer and consumer, introduced a bill providing that the state industrial commission shall offer to publish names of individuals who desire to purchase produce direct from farmers, creameries, cheese factories and country dealers.

Persons desiring to deal direct with the farmers or country dealers for farm produce will have to file applications with the commission.

Both farmer and consumer would benefit under the proposed law, according to Mr. Hull, who presented statistics to show that the farmer got only 46 per cent of the price for his produce, railroads and retailer getting the other 54 per cent.

"By means of the parcel post, farmers and country dealers will be able to sell their produce direct to the consumer at a much higher price and the consumer will purchase it at a much lower price than under present conditions in large cities," said Speaker Hull.

Any dehorning of cattle should be done early, as it is an unpleasant task at best, and if delayed till a warm day or two comes on immediately after the dehorning, serious results are apt to follow.

Galloway

Invites You to Enjoy Yourself at His Expense

Right now's the time, boys, to take that little trip to Waterloo. You've got the time, and it will pay you big to see with your own eyes the wonderful money-saving bargains to be snapped up right in the big Galloway factories. Bill says

"Come to Waterloo"

Be my guest at my expense. Whether you stay a day or a week, I'll entertain you at our $60,000 Agricultural Club, planned and built for the comfort and pleasure of my farmer friends. Over 500 here last week had a ripping good time. Some bought; some didn't. It doesn't matter. You're under no obligations whatever to buy.

See My Big Factories!

A great sight! Worth traveling many miles to see. I will show you through an enormous chain of factories—largest in the world selling direct to farmers—hundreds of men turning out a flood of Engines, Spreaders and Cream Separators where only a few years ago was a cornfield on the edge of Waterloo. Don't miss this!

I Will Expect You Sure!

Now, don't disappoint me. I'll look for you and will make your visit a big surprise. You'll go back and tell your friends: "I never had such a fine vacation." If you can't come just now, write me why.

WILLIAM GALLOWAY, Pres.

Flying Dutchman Variable Drop Corn Planter

If you pay more than $35.00, and freight, for a Corn Planter you are actually throwing away your money.

You can save $7.00 to $10.00 and still get the World's Best Planter.

The Flying Dutchman Planter which all Flying Dutchman Dealers are selling for $35.00 F. O. B. our Factory or Warehouses at

BLOOMINGTON, ILL.	INDIANAPOLIS, IND.	MADISON, WIS.
KANSAS CITY, MO.	COLUMBUS, OHIO	TOLEDO, OHIO
DES MOINES, IOWA	SIOUX FALLS, S. D.	ST. LOUIS, MO.
MINNEAPOLIS, MINN.		OMAHA, NEB.

is the very latest and best Corn Planter we have ever built.

From the ground up it is the best Planter that money and brains can produce. It is backed by the Flying Dutchman reputation, which has for nearly 50 years stood for the highest quality in farm implements.

ABSOLUTELY ACCURATE. DROPS 2, 3 or 4 KERNELS. EDGE OR FLAT DROP.

The simple Variable Drop device can be instantly changed while the Planter is in motion to 2, 3 or 4 kernels, to meet any soil requirements.

The drop is as positive and accurate as the tick of your watch. Drive fast or slow and the hills are always in check—absolutely no variation nor scattering.

It can be instantly changed to a Drill—simply move a lever.

FIELD NOTES.

The strawberry plants advertised elsewhere in this issue by Geo. W. Bridgman Nursery Co., Benton Harbor, Mich., have forty years of practical experience back of them. Write for circular and prices, mentioning this paper.

The Baier automatic chick feeder and protector, advertised elsewhere in this paper, is a time and labor-saving device, works automatically and sells for $4. Write Baier Bros. Mfg. Co., Cissna Park, Ill., mentioning The Homestead.

Evergreens are advertised elsewhere in this issue by the Harvard Nursery, Harvard, Ill., at $1 each for Norway spruce, arbor vitae, etc., prepaid by mail. Larger trees are supplied at correspondingly attractive prices. Sixteen different kinds are handled by this nursery and price list and full particulars will be furnished upon application.

The American Guernsey Cattle Club, the first breed organization to establish an Advanced Registry system, upon the basis of a year's production of butter fat has now come forward with a very complete "List of Advanced Register Sires and Great Producing Dams." The list is published in the Guernsey Breeders' Journal for February, and we believe it is the first one attempted by any cattle breeders' organization. To the breeder or purchaser it will prove of incalculable value by giving not only the number of progeny, but the record in pounds of milk and butter fat each cow has produced; every bull that has two or more progeny, and each cow that has one, in the Advanced Register, being listed. The bulls and cows with their progeny are alphabetically arranged in separate lists. A condensed history from birth to date is concisely given. The list is corrected to November 1, 1912, but we understand it is the purpose of the club to keep it up to date for the benefit of all breeders. Copies can be obtained by writing to the office at Peterboro, N. H., and should be in the hands of every breeder.

The inquiries for Wisconsin homemaking opportunities are four times as numerous now as they were a year ago, according to A. D. Campbell, general manager of the Wisconsin Advancement Association. These inquirers are furnished printed matter containing census figures upon the crop yields of the various counties of the state.

W. W. Vaughn, breeder of Chester White hogs, Marion, Iowa, writes: "We have had a brisk trade in Chester White bred sows at Wildwood. We still have a few good yearling sows, strong boned, roomy and well quartered, weighing around 375 pounds, and thirty gilts with length, quality, size and finish, weighing from 200 to 300 pounds. They are bred to high-class herd boars to farrow in March or April. We are making very reasonable prices compared with present pork value." See advertisement elsewhere in this issue.

James Pedley, Britt, Iowa, has for sale, as advertised elsewhere in this issue of The Homestead, a pair of strictly first-class Clydesdale stallions of the best individuality and breeding. His aged stallion, Forest King, is the sire of the younger horse and the older one is a full brother to this splendid show horse. The prices that he is putting on both the horses are ones that should move them at once, especially if the men who may write him about them could see the animals. The older horse is a grandson of the famous Baron's Pride and has a lot of substance, is a good mover and a successful sire of the highest grade of colts. The younger horse is a yearling and by Forest King, and out of the mare he is will make a bigger and, we feel, as good a horse as his sire. His dam is being offered for sale at this time also and she is one of the good things that are being put up for sale this season. She is coming six years old, has a flat bone, good foot, is more drafty than the average of her breed and is bred along the best that the breed can show. Write to Mr. Pedley at once for his descriptions of the horses and plan if you can to get out to his place to see them for yourself. Address James Pedley, Britt, Iowa. See advertisement elsewhere in this issue.

Justice's Imported Stallions.

J. R. Justice, Galesburg, Ill., has some extra good young imported Percheron and Belgian stallions, two, three and four years old, and every one over a ton in weight, that he is anxious to move. They are the right kind and will be priced as low as is consistent with good quality. If interested in a good horse get in touch with Mr. Justice. He can be addressed at the Union Hotel, Galesburg, Ill., as per his advertisement elsewhere in this paper.

The Roberts Dispersion Angus Sale.

On April 8th, at Atlantic, Iowa, will occur the dispersion sale of the Walter Roberts Angus herd and it promises to be one of the leading events of the season. There will be sixty head in the sale, among which will be twenty-four head of Blackbirds, twelve Trojan Ericas and a lot of Prides and Queen Mothers. The old herd bull, Deceiver, will also be sold and a choice lot of young bulls. Twenty to twenty-five cows will have calves at foot. The sale will be held at the fair grounds at Atlantic, where it will be handy for everybody to get to and from the sale. Write the Walter Roberts Estate at once for copy of their catalog and kindly mention The Homestead.

The Usefulness of the Portable Engine.

It has been our experience that farmers never regret the purchase of a good portable engine. There are so many places about the modern farm where power is needed that the farmer who realizes the merits of such a machine will never be contented without one. One of the best portable gasoline engines on the market is the Lauson Frost King, advertised on the first inside cover of this issue. It will be well for our readers who are thinking of buying a gasoline engine to look up this advertisement. The Lauson engine is sold under a positive guarantee. If it does not suit our readers they may return it and receive their money back. The engine is made in various sizes from one to 160 horsepower and in all types. Prompt deliveries can be made. Address all correspondence to the John Lauson Mfg. Co., 202 N. W. St., New Holstein, Wis.

Wright's Herefords.

W. T. Wright, Mt. Pleasant, Iowa, has a large herd of Hereford cattle and at the present time is offering twelve bulls one year old and over and cows with calves at foot or safe in calf and heifers of any age. The bulls are sired by the noted show and breeding bull, Pre-emptor, an intensely bred Anxiety 4th bull that has sired so many good ones for Mr. Wright. The others are by Pre-eminence, one of the very best sons of Pre-emptor. Mr. Wright has some herd bull propositions as well as bulls for steer-breeding purposes. Mr. Wright has breeding matrons in the herd sired by such noted bulls as Hesiod 2d, Wilton Alamo 6th, Imp. Fine Lad, Shadeland Dean 22d, Peerless Perfection 19th, Advance by Disturber, Lawton by Larrs, Nero by Eureka, Beau Peerless 4th and other noted bulls. Mr. Wright is one of the strongest Hereford enthusiasts in the country and is one of the men who has stayed by the breed during the long depression in Hereford values. He has raised most of the cattle he is offering and for this reason can afford to price them worth the money. In this herd our readers will find the very best of blood lines combined with strong individuality. The cattle have been grown under conditions found on the ordinary farm. They are not carrying any excess flesh, but are in just nice breeding condition and the man who buys any of these cattle and will give them anything like decent care will be more than pleased with his purchase as time passes. If interested in a bunch of females or a good herd bull see Mr. Wright's advertisement elsewhere in this issue and write him for prices, mentioning The Homestead.

Strawberries.

Frank W. Dixon, Holton, Kan., advertises strawberry plants in this issue and wants to send his strawberry catalog to every reader of this paper who loves strawberries. Mr. Dixon has been specializing in strawberries many years, he has met with big success and numbers his regular customers all over the United States. He solicits orders from those who will grow only enough for home use as well as from large commercial growers. No order is too small or too large for the Dixon strawberry farm. Mr. Dixon also grows all other kinds of small fruit plants.

Petty Bros.' Pure-Bred Seed Corn.

Petty Bros., Liberty, Mo., breeders and growers of pure-bred seed corn, have this year the greatest line of seed corn they have ever raised. They are seed corn breeders who sell only the corn raised on their own farm. When this is sold they have no more to sell. Last year they returned over $1,000 sent in on late orders, as all their corn had been sold. They produce three varieties of yellow corn and two of white. Their location is such that their corn is adapted to any location, north or south. This year they will ship ear corn in bags, thus saving the expense of crating to the buyer, as they price ear corn at same price as shelled. Note their advertisement elsewhere in this issue and address accordingly.

Galbraith & Son's Stallions.

Alex. Galbraith & Son, De Kalb, Ill., write: "We have recently added to our stock some Clydesdales, Shires, Suffolks, Percherons and Hackneys, all of the very best quality and several of them prominent prize winners. We are offering these horses as well as our regular stock at very attractive prices and on easy terms. In buying a stallion of any breed the most important things for a buyer to keep in view are to get a horse that is sound, well bred and well suited for the purpose, a horse whose cost price is not out of proportion to his real merit and value, and also to get a guaranty that will prove a real protection in case the stallion should not 'make good.' This can best be had from a reputable firm whose business is thoroughly established and whose name and reputation stand for something in the horse world. We invite a close inspection of our present stock, feeling confident that neither an unsound, inferior nor defective horse can be found amongst them." See the advertisement elsewhere in this paper.

Short-horn Bull Sale.

On March 8th, at Malvern, Iowa (sale to be held in the morning), Geo. H. White and J. I. Swain & Son will sell fifteen head of Short-horn bulls and among these are some that are good enough to head herds. One of the bulls they will offer is Sultan Goods, a son of the noted Best of Goods and out of Village Sultana, a daughter of the grand champion, Whitehall Sultan. Here is a well-bred bull and an individual that the breeders will want. They are selling a good Cruickshank Butterfly bull, also sired by Best of Goods, and another splendid bull is Roan Goods, that is out of a daughter of Imp. Fashion's Favorite. There is another good young bull in the sale sired by Best of Goods and out of a Lord Banff 3d cow. There are several other good young bulls in this sale that both farmers and breeders can use. In the afternoon a draft horse sale will take place and they are going to sell these horses in the morning. It therefore behooves those who want bulls to be at Malvern by ten o'clock on the morning of March 8th. Geo. H. White, Emerson, Iowa, can give you further information about these bulls and he will send you a catalog if you ask for it.

Smith & Son's Short-horn Cattle Sale.

An offering of choice cattle, practically all of their own raising and of very desirable blood lines and individuality, is the sort of stuff that will be offered in the sale of Short-horn cattle that will be made by H. Smith & Son, at their farm near Tobias, Neb., Saline county, Neb., on Tuesday, March 18th. The thirty-eight head that will go in the sale include thirty cows and heifers and eight bulls. They are not in high flesh, none of them fat, but they are in the very best sort of working order. Smith & Son have been in the business of breeding pure-bred cattle for a number of years and today their herd will compare very favorably with the very best herds of the country. They have employed the very best kind of bulls that they could get, that money would secure and that good judgment, tempered with many years of experience, could select. The greater part of the offering is sired by the great breeding bull, Gold Dust. This bull has come to be regarded as one of the very greatest Short-horn sires that has ever been used in central Nebraska. He has sired some of the most prized females in many of the good herds of the West and a number of his sons have done service in good herds. To find a bull to mate on the daughters of Gold Dust was not a small task and, in fact, two or three bulls have been used very lightly, but none gave the desired results until they secured Roan Cumberland, a son of Cumberland's Last. Roan Cumberland is a bull that was used some in the C. A. Saunders herd and was parted with very reluctantly by that good breeder. The writer is of the opinion that better property in the Short-horn line than a cow bred to Roan Cumberland will be hard to secure. His calves on this farm are certainly very choice, very uniform as to type and color and of excellent conformation, which makes them very desirable. The writer would like to see a good attendance at the sale. We would also like to see a wide distribution of the catalogs for this event. They are ready to mail and a postal with your address, stating that you saw this notice in The Homestead will bring it to you. Address H. Smith & Son, Tobias, Neb.

Advantages of Steel Wagon Wheels.

Money, labor, time, horses and roads are saved by the use of steel wheels. The narrow-tired, high, wooden wheel farm wagon is the blacksmith and repair man's best friend, while the Empire steel wheels with the staggered spokes are the farmer's best friend. Durability, ease of operation in bad weather and heavy roads, the fact that the Empire wheels fit any wagon, are all strong arguments in their favor. There are over a million in use and they all give satisfaction. Write today to the Empire Manufacturing Company, Quincy, Ill., mentioning this paper and ask them for detailed information, which will be sent free.

Meith's Short-horn and Poland China Sale—Last Call.

One of the last opportunities to secure choice Poland China sows this season in Nebraska will be at the sale of A. L. Meith, Cairo, Neb., which will be held on March 5th. On the same date and at the same place Mr. Meith will sell forty head of carefully bred Short-horn cattle. The cattle are all of desirable ages and while in only moderate condition they are of such blood lines and conformation that they will surely make good for the men who may buy them. The Poland Chinas come of very choice breeding and they are inlike to see a good number of breeders on hand for this sale. We believe that it will pay to be there. Those unable to attend will do well to place buying orders for this stuff. They will probably sell at such a price that they will be good property. J. C. Price will represent The Homestead at this sale and will make the best possible selections for the men who send bids to him. Address all letters in care of A. L. Meith, Cairo, Neb.

The Kansas City Hereford Cattle Sale.

The sale of sixty bulls and forty females to be held at Kansas City, Mo., on March 4th and 5th under the management of R. T. Thornton, 1309 E. 15th St., Kansas City, Mo., is a sale those desiring Hereford cattle should attend. The list of breeders contributing to the sale is assurance of good cattle as well bred as are found. The bulls are of serviceable ages and a number are high-class herd headers. The cows are young and with the exception of a very limited number of things too young to breed are in calf to the bulls at the head of the herds of various contributors. The contributors are Benton Gabbert, Dearborn, Mo.; W. A. Dallmeyer, Jefferson City, Mo.; Funkhouser Estate, Plattsburg, Mo.; J. W. Lenox, Lake City, Mo.; S. J. Gabbert, Dearborn, Mo.; T. W. Carmichael, Odessa, Mo.; James A. Gibson, Odessa, Mo., and R. T. Thornton, Kansas City, Mo. Each of these gentlemen invite you to the sale. They want you to see the kind they produce and if they please you buy such as you want.

Percheron and Shire Sale.

Those of our readers who want to buy a registered Percheron or Shire stallion or some good registered mares of the same breeds will be interested in the sale at Malvern, Iowa, on March 8th. This is the second annual public sale that has been made by the various breeders who live in this vicinity. The breeders who are making this sale own from one to fifteen mares each and they have now got to the point where they can make an annual sale each year. They are selling a grand good lot of young stallions in this sale and also some older stallions that will weigh 2,200 pounds. Besides these, there will be a splendid lot of Percheron and Shire mares and all of these are bred to ton stallions. It will be one of the best opportunities offered this spring to buy registered stallions or mares at your own price. They are also listing one pedigreed Mammoth jack and forty head of high-grade draft mares, geldings, fillies and colts. You cannot afford to miss this sale if you are thinking of buying stallions or mares. Write Fred Durbin, Mgr., Malvern, Iowa, for catalog and kindly mention The Homestead.

March Sale of Poland Chinas.

A March sale of bred sows that is full of good things is the offering of bred Poland Chinas to be sold by M. F. O'Hern, Barnum, Iowa, on his farm southeast of Barnum on Tuesday, March 11th. He has listed about forty head of good brood sows of the larger type and from a strain that has always produced well at this farm. The litters that these sows have farrowed on the farm show them to be a profitable strain to handle and the sows that will go through the ring on the day of the sale are the same kind that have made good money for their owner in the years that he has had the herd on his farm. There are fifteen tried sows, four fall gilts and twenty-one spring gilts in the sale all bred so that any farmer who is short of brood sows for the coming year can handle them to great advantage. The most of them are bred for April farrow and some later, making them come in at just the time when they will be bound to do the best for the man on the average farm who may buy them. The boar to which the majority are bred is a good pig of the larger sort, but smooth and an easy feeder. He is Standard Chief The Great, tracing back to the best of Harvey Johnson's breeding, and the most of the gilts and tried sows in the sale are of the medium type of the breed crossed on John Miller breeding. It will be time well spent to go over there for a day or so, attend this sale and then go to the sale at Clare the next day, for at each of these sales there will be sows that will be bound to suit someone. Send for a catalog now, mentioning The Homestead when you write. Ray L. Gribben or C. C. Carlin will attend the sale for The

Homestead. Address M. F. O'Hern, Barnum, Iowa. See the advertisement elsewhere in this issue.

—Fred Post, Moulton, Iowa, in remitting for advertising already done, reports that he is entirely sold out of White Holland turkeys, but that he has a few choice Barred Plymouth Rock cockerels for sale at a bargain.

—M. V. Leeper, Redfield, Iowa, in furnishing copy for his Barred Plymouth Rock chicken and Bronze turkey advertisement appearing elsewhere in this department, writes: "The young toms I have left are late hatched birds, weighing from nineteen to twenty-three pounds. The old toms are extra fine, well-marked birds, and anyone wanting yearling toms will be pleased with these birds. My breeding flock of turkeys are up to my average of former years, hens in this flock weighing up to twenty-four pounds. For size and markings my Barred Rocks are second to none, pullets weighing up to eight and one-half pounds, hens ten pounds, cockerels up to ten and one-half pounds and cock birds up to fourteen pounds."

Luckhardt's Percheron Dispersion.

On Wednesday, March 12th, L. H. Luckhardt, Tarkio, Mo., will disperse his small but select stud of registered Percheron horses. A dozen mares and fillies, eighteen stallions and four Mammoth jacks are listed. The Percherons are all blacks but a few and these are good grays. The jacks are blacks with good markings. Several of the mature stallions weigh a ton or better and ten of the mares weigh over 1,800 pounds. The jacks are all broke, are the heavy-boned kind and are good breeders. Mr. Luckhardt has bred Percherons for a number of years and is dispersing, as he has moved to town and cannot give his horses the attention they need in order to carry them in the condition necessary in order to get best results. They are a decidedly useful lot and sell in just good breeding condition. The mares have been in harness almost regularly since of working age. Note Mr. Luckhardt's advertisement elsewhere in this issue and send for his catalog, kindly mentioning this paper when doing so.

Dannen and Lowrey's Percheron Sale.

R. C. Dannen, Marshalltown, Iowa, and H. C. Lowrey, Nevada, Iowa, will hold a joint sale of Percheron stallions and mares in Harmon's sale barn, Marshalltown, Iowa, on March 6th. Mr. Lowrey is one of the old-time importers of Percherons and has been actively identified with the Percheron interests for over a quarter of a century. Mr. Dannen has been breeding Percherons for a number of years and has made importations at different times. Both men are recognized as excellent judges of horses and this is the class of men who could be expected to put up an offering of horses with merit. The twelve stallions are all imported with one exception and nearly all the mares are imported and are safe in foal to the service of the best of imported stallions. Many of the stallions and mares in this sale were winners at four state fairs during the year of 1912. Among them is a four-year-old stallion, Jambameau, the first-prize winner at the Minnesota State Fair. See the advertisement of this sale in this paper and write for catalog, mentioning The Homestead.

Short-horn Herd Bull for Sale.

Earl of Linwood 306024, a five-year-old roan Short-horn herd bull, is offered for sale at a reasonable price by F. P. Greenwalt, Mount Auburn, Iowa. Earl of Linwood has for a sire Matchless Robin, a show bull sired by the International prize-winning bull, Imp. Rock Robin, used so successfully in the herd of I. M. Forbes & Son. The dam of Earl of Linwood was Imp. Belle of Ordens by Lochaber, a grandson of Star of the Morning. Earl of Linwood is a low-down, thick, beefy bull with as good a head and horn as one could find. He has been used in this herd for four years and the uniform lot of short-legged, beefy daughters and sons of his to be found in the herd are his best recommendation. The man who needs a herd bull and will visit the herd and look over the get of this bull cannot help but buy him at the price. This bull is in nice breeding condition and weighs a ton. This firm also has a thirteen-months-old red bull sired by Earl of Linwood that they will price worth the money. If you are interested in a good herd bull it will pay you to investigate this fellow. The advertisement appears elsewhere in this paper. When writing kindly mention The Homestead.

Lawler's Sale Postponed.

On account of a severe snowstorm and blizzard the sale that was to have been held by James Lawler, Clare, Iowa, at his farm on February 22d, was postponed until March 12th. On that date there will be a chance to get some great young sows bred to two of the best big-type boars in the state for litters that will come at a time when the farmer can take care of them to the very best advantage. The class of the offering has been referred to in these columns before, but we would like to call attention to the sale again, as there are some sows here that will compare favorably with those in any sale this winter. This sale will follow the sale of M. F. O'Hern at Barnum, Iowa, just a few miles to the south, and the two days' trip will be a profitable one for anyone who may not yet be supplied with all the sow stuff that they will want for the coming year. The boars at the head of Mr. Lawler's herd, Miller's Choice, Chief Price A. and the young boar, Giant's Equal, are as good a lot of sires as almost any breeder in the state can show. The older one, Miller's Choice, is a boar that in only fair flesh weighed 970 pounds, and he is a well-made pig, too. Chief Price A. is as strongly bred in big-type lines as any sire in the country, being sired by old Chief Price 2d and out of a sow by Fesenmeyer's A Wonder, second dam by Wonder 2d. Such good lines of breeding ought to bring good prices and is surely worth an investigation on the part of men who still can use some good sows for next year. Send for the catalog now and mention this paper when you write. Address James Lawler, Clare, Iowa. See advertisement elsewhere in this issue.

Miller's Percheron and Jack and Jennet Sale.

S. J. Miller, Kirksville, Mo., the well-known Percheron importer and breeder of Percherons and Mammoth jacks and jennets, will hold at his barns in Kirksville, Mo., on Thursday, March 6th, a sale that should be attended by those looking for imported or home-bred stallions and mares and Mammoth jacks and jennets. Ten stallions and six mares make up the Percheron offering. Ten jacks and fourteen jennets are listed. It is an offer of high-class breeding stock that sells in just good breeding condition. The stallions are all tried breeders with the exception of four that are one and two year olds. The mares are bred to stud stallions that are sires of exceptionally high-class colts and, as they are choice individuals, they should prove valuable investments. There are among the jacks a number that are of serviceable ages and others are fine prospects to buy and grow out. Several of the jennets have colts at foot and all of breeding are bred to high-class herd jacks. Remember the sale is next Thursday. If you have not received a catalog send for one now and kindly mention this paper when doing so.

The Healy Poland China Sale.

On March 8th, at Manilla, Iowa, J. H. Healy will make a public sale of sixty head of Poland China sows and he is certainly selling a splendid bunch. We have personally looked over the Healy offering and we want to say to Homestead readers that every gilt that Mr. Healy is selling in this sale is a good one. We question whether we ever saw as many gilts in one sale that are as good as the bunch that he will sell in this sale. These gilts are all sired by his great boar, Lingford's Choice, that was the first-prize boar a couple of years ago at the Nebraska State Fair. This boar and two of his litter brothers were all winners at the same fair and they were three of the best boars of their age that were ever shown by one man at that fair. Mr. Healy has a great bunch of brood sows, all of the large type, and these gilts are all out of them. In last week's issue we gave extended mention of the breeding of the Healy herd and we will not repeat it again this week, but we will say that if there is any farmer or breeder who has not as yet bought his sows this winter here will be a sale that they can all attend and get about what they want. The gilts that he will sell in this sale will all average from 375 to 400 pounds by sale day. Make it a point to attend his sale, as it will be one of the greatest gilt offerings of the entire winter season. Bids sent to M. T. White or C. C. Carlin will be cared for on day of sale.

Colosso and Thuirer's Big Orange.

C. L. Thuirer, Fostoria, Iowa, who sells a splendid offering of bred Poland China sows at his farm on Tuesday, March 11th, will be remembered by those who were at the Minnesota State Fair in 1911 as the man who showed the great junior yearling, Colosso. This sale of sow stuff has as one of its strongest features the twenty odd head of sows sired by this boar. Mr. Thuirer was unfortunate in losing Colosso just about a year ago, when he had given promise of making the herd one of the best known in the state. Considerable of the sows being retained in the herd are by him and they are bred to the younger boar, Thuirer's Big Orange, a cross which will be found on much of the sale offering. Thuirer's Big Orange is a son of Crow's Kind and gets the Big Orange in his name because his grandsire, the sire of Crow's Kind, is Big Orange. His dam, Black Lady, is by Up To Date, out of Surprise Lady by Big Surprise 144749, all the best of W. J. Crow's breeding. This boar is big in bone, good of feet, is mellow, active, smooth and sires the short heads and deep, stretchy bodies making the most desirable class of breeding hogs. We would expect some great things of this cross of the Big Orange boar on the Colosso sows. Colosso produced considerable quality on his stuff and gave them size, strong arched backs, good hams and lots of depth. Thuirer's Big Orange gets smooth pigs with lots of bone and a ruggedness of build that shows constitution and vigor in breeding. Some of the gilts are by other boars, one especially by Smooth Giant by Giant 2d by Nebraska Giant, that is one of the best in the sale. She is the largest of the spring gilts, smooth, deep, well hammed and with good bone and feet. Another of the choice spring gilts is by Big Black Jumbo, the big boar making such an excellent record in the Bloemendaal herd. The fall gilts are even in size and big, and while speaking of gilts there are three May gilts to be sold that are extra choice, nearly as big as late March gilts on most places, and cracking good ones, too. Write for catalogs now and plan on attending the sale. Ray L. Gribben will attend the sale for The Homestead. Address, mentioning this paper, C. L. Thuirer, Fostoria, Iowa.

The Hunt & Weberg Duroc Sale.

On March 4th, at Denison, Iowa, Hunt & Weberg will make a sale of fifty head of Duroc Jersey bred sows and it will not only be one of the last sales of the season, but it will be one of the well-bred offerings of the year. The sows these gentlemen are selling in this sale will be bred to such noted boars as Crimson Wonder 3d, the grand champion boar of several states, and this will be one of the first opportunities offered to buy a sow bred to this noted boar since he has come west. The other sows will be bred to C. H.'s Special, Gold Dust Prince and Grand Chief, every one a good boar and a splendid breeder. Included in the sale will be daughters of that noted sire, King The Col.; Col. Willetta; C. H.'s Special; Model Advance; Golden Model; A. F.'s Pilot Wonder; Golden Wonder 17th, and several other noted sires. These two well-known breeders have selected the very best sows they have in their herd for this sale and they are selling some that any breeder can well afford to buy. Few offerings this winter have contained as many well-bred sows as will be found in this sale. They are in nice condition and, while not loaded with fat, are in just the condition that will do the buyer the most good. Another thing about the sows that go into this sale—they are immune, and that means a great deal to the man who wants to buy a few of these good sows. If you don't get a catalog in time, just come to the sale or be represented with a bid at the sale. M. T. White will represent The Homestead on the above occasion and any bids sent him will be properly cared for.

Limestone Valley Farm's Jack and Jennet Sale.

L. M. Monsees & Sons, Smithton, Mo., who hold their annual sale of jacks and jennets on Tuesday, March 4th, at Limestone Valley Farm, have listed such a superior class of breeding stock that all who are in the market for or are interested in the Mammoth jack should arrange to attend the sale and see the thirty-five head of Mammoth jacks and twenty-four head of jennets that sell. It also will be an excellent time to see the world's leading jack breeding plant and to note the improvements being made in the herd. It was the writer's good fortune last week to spend some time on Limestone Valley Farm and again inspect the herd and the list of sale stock and we assure our readers of an opportunity never before surpassed to pick from this offering jacks and jennets that cannot fail to please and make good. Monsees & Sons have listed jacks that will please those looking for herd headers or for just good serviceable mule jacks. In fact, they have listed jacks that will fill the wants of the masses as well as those wanting the very highest type of herd headers. Among these herd headers we desire to call special attention to Buster Mammoth, a three year old; Dick Moore, another three year old; Monsees' Monster, and John Stypes, the latter being four and six years of age. The champion jacks, Limestone Mammoth and Orphan Boy, are represented in the offering by sons and grandsons. The twenty-four jennets are mostly bred to Orphan Boy and a number have jack and jennet colts at foot. It is not expected that former sale records will be broken, but this offering compares favorably with any ever made by these gentlemen and in some respects it is better. Monsees & Sons have established such an enviable reputation for square dealings in all their business transactions, both privately and through these public sales, that every one is assured an honest, square deal, backed by a guarantee that is unimpeachable. They put these jacks and jennets through the sale ring unprotected and your price is theirs. They have refused flattering offers for some of the tops, but, as has always been their custom, these offers were turned down and the stock will sell on its merit for the honest high dollar. Remember, the sale is next Tuesday; also remember that Monsees & Sons invite you to come a day or two early so that you may have ample time to inspect the stock and ask any questions you desire. See advertisement elsewhere and when writing these gentlemen kindly mention this paper.

Donohoe's Angus Sale.

M. H. Donohoe, Parnell, Iowa, is holding a sale of fifty-two Angus cattle at Williamsburg, Iowa, on March 5th. Ten bulls will be sold and among them are a number of extra good herd bull propositions. Black Oakfield, an extra good son of the noted sire, Black Woodlawn, is one of the good ones. He has been good enough for Mr. Donohoe to use on some of his best cows. The general high character of the bull offering should make this an excellent opportunity for breeders to select herd bulls. The females are equally as good and, in fact, few sales in the past have contained as many extra good cattle as this. Such noted celebrities as Blackcap 26th, Blackbird Mary, Blackbird Favorite 3d, Blackbird McHenry 73d, Blackbird McHenry 66th, Blackbird Cherokee 26th and other great females will be sold. Brookside Blackbird 20th, Blackbird of Cherokee 42d, Blackcap McHenry 96th and Midnight Lass W. are a quartet of two-year-old heifers that are mighty hard to beat in any sale. They are thick, smooth heifers with a world of quality and every one a show heifer. Oakfield Blackbird 18th is an extra good yearling by Irwin C. and out of Blackbird Judy; Oakfield Blackbird 19th is another extra good yearling daughter of Irwin C. and out of the noted cow, Blackbird Mary, and there are several other good yearling heifers, among them several show prospects. G. W. Felton, Knoxville, Ill., is consigning ten extra good females. If you want good Aberdeen Angus cattle write M. H. Donohoe, Parnell, Iowa, mentioning The Homestead, and arrange to attend the sale.

Frank Iams' Offering.

Frank Iams, St. Paul, Neb., addressing all those who are in any way interested in the purchase of draft horses, says: Cheer up! Never mind who is president, "Bryan or Wilson." It's "the man" who "does things" who makes the "government wheels" run smoothly and makes the "people prosperous." That's Frank Iams, St. Paul, Neb. He keeps "butting in," selling more first-class Percheron and Belgian stallions and mares annually. You will buy of him if you visit his barns. Iams began life a "poor boy," without money, friends or rich relations. Today he loans money to "110 banks" in Iowa, Kansas, Nebraska, Colorado and the two Dakotas and has the largest collection of first-class imported Percheron and Belgian stallions and mares owned by any one man in U. S. He has enriched his customers and their customers "ten million dollars" by placing first-class, big drafters on their farms and for sale to big cities (at "let-live prices"). "Iams' thirty-one years" of successful business ("making every statement good"), selling 5,444 registered stallions and mares "in thirty different states," also Mexico, Canada and Japan. Also 140 horses "on order" (or "on honor") from one to seven horses to "a party" and has never yet seen any of these "110 buyers." Iams has crossed the ocean "fifty times" for first-class horses and is good for "fifty more." Iams has sold from three to eleven head of stallions and mares each to sixty different farmers and ranchmen, one to five at a time. These men have "made good" in the horse business. They are Iams' "big, whole-page" advertisers daily. Mr. Business Farmer, if these many prosperous, "money-making horsemen" can buy stallions and mares of Iams and save $1,000 a stallion and buy a better horse, why is it not "good business" to buy your stallions and mares of the "king bee" horseman, Iams? Iams has eighty Percheron and Belgian stallions and mares, two to six years old, weight 1,700 to 2,500 pounds, 50 per cent "ton horses," 25 per cent grays, at $200 less price than blacks—75 per cent blacks and bays. Iams sells these stallions at $1,000 and $1,400 (few higher). Imported mares $700 to $1,000. All these stallions and mares have been "inspected" by two veterinary surgeons in France and are approved, registered and branded by French government. They have been "inspected" by two federal veterinary surgeons at New York City and horses pronounced "healthy" and their certificates "stamped and approved" by "chief of animal husbandry" at Washington, D. C. Also Iams has had a "Nebraska deputy state veterinary surgeon" "inspect" all his horses and Iams gives each buyer a "certificate of health and soundness" from this "state deputy veterinary surgeon." Iams' six financial letters of recommendation from six of the best banks in Nebraska (shown in his 1913 catalog)—they tell you why you should buy imported stallions and mares of Iams. His thirty-one years of successful business—his "one-half million dollars" behind his guarantee—the fact that he is a "live wire" business man—an expert horseman. He makes all competitors "stammer and stutter" and get "their hammers" out for Iams. But "every knock"

NEXT WEEK'S SALE PROGRAM

Monday, March 3	Durocs, John Truax & Son, Sycamore, Ohio.
Tuesday, March 4	Herefords, R. T. Thornton, Mgr., Kansas City, Mo. Jacks and Jennets, L. M. Monsees & Sons, Smithton, Mo. Durocs, Hunt & Weberg, Denison, Iowa.
Wednesday, March 5	Herefords, R. T. Thornton, Mgr., Kansas City, Mo. Aberdeen Angus, M. H. Donohoe, Williamsburg, Iowa. Poland Chinas, A. L. Mieth, Cairo, Neb. Short-horns, A. L. Mieth, Cairo, Neb.
Thursday, March 6	Percherons, S. J. Miller, Kirksville, Mo. Jacks and Jennets, S. J. Miller, Kirksville, Mo. Herefords, J. A. Shade, Kingsley, Iowa. Percherons, R. C. Dannen and H. C. Lowrey, Marshalltown, Iowa.
Friday, March 7	Percherons, V. D. Wolcott, Battle Creek, Iowa. French Drafts, V. D. Wolcott, Battle Creek, Iowa.
Saturday, March 8	Percherons, Fred Durbin, Mgr., Malvern, Iowa. Short-horns, Fred Durbin, Mgr., Malvern, Iowa. Shires, Fred Durbin, Mgr., Malvern, Iowa. Poland Chinas, J. H. Healy, Manilla, Iowa.

is a "boost" for Iams, as when stallion buyers visit "Iams' horse emporium" they find Iams has the horses as represented and that Iams "makes good" and his "old customers" are his best "whole-page advertisers." Write for Iams' 1913 "catalog and eye opener" with a "laugh and $1,000 bargain" on every page. It's the finest and most up-to-date "horse catalog" in the world. Buy a "through ticket" to "Iams' horse town," then "buzz around" and see Iams' "horse show," as he has the "best bunch" of big black boys he has ever owned. His "selling clothes" fit all buyers. See his advertisement elsewhere in this issue.

Burge's Short-horns.

George H. Burge, Mt. Vernon, Iowa, well known as a Short-horn breeder for nearly a quarter of a century, has been winning many important prizes at the Iowa State Fair for many years on cattle of his production. At the present time Mr. Burge has two extra good bulls for sale that are suitable for herd-heading purposes. A representative of this paper recently visited Mr. Burge and found on his farm some good young bulls. There is a good red yearling bull sired by a son of Imp. Lord Banff and out of a Nonpareil cow that will please some breeder looking for a good thick bull with a good spring of rib and well proportioned throughout. There is another good yearling red bull sired by Sultan's Heir, a son of the celebrated champion, Whitehall Sultan, and out of the dam of Mr. Burge's herd bull, Silver Sultan. This calf will please someone looking for a good one. Another good dark roan, thick bull is a Roan Lady sired by Choice Sultan 2d, a grandson of Whitehall Sultan. There is another good Flower Girl bull sired by Sultan's Heir. Mr. Burge can please the breeder in need of a herd bull, both in quality and price. During the past year Mr. Burge has offered the public his services as a live stock auctioneer. He has been employed on a number of sales and in every case has given excellent satisfaction and has received many compliments on his conscientious efforts to secure the values for the live stock sold in the sales with which he has been connected. His terms are reasonable and he would be glad to hear from anyone in need of the service of an auctioneer who knows values and pedigrees. See his advertisement and write him, mentioning The Homestead.

Dekalb's Hampshire Sale.

On March 12th H. D. Dekalb will make a public sale of Hampshire sows which, from present information, ranks as the greatset offering of that breed which has been presented to western buyers. For the convenience of patrons Mr. Dekalb has decided to hold the sale at Council Bluffs, Iowa, because of the excellence of railroad facilities. Sixty head of bred sows have been cataloged for this occasion. Thirty of them are mature sows that have raised litters. Most of these are the get of Major 19069, a hog which has been in service in the Dekalb herd for five years and that has decidedly remarkable qualities as a producer of size and quality. Major comes rightly by his impressiveness, because his ancestors for several generations have been champion prize winners at the greatest shows. These thirty tried sows have a great deal of size, many of them tipping the scales at from 600 to 700 pounds. They will have been bred to Dekalb King 13th and Dekalb King 56th. There will be twenty yearling sows, a portion of them by Major and others by Pirate 4517. There will also be ten spring gilts by Major and Erlanger 1039, the latter a Kentucky-bred grand champion winner. The whole consignment have been bred for April and May litters. Taken in its entirety the sale offering is an extraordinarily good one, in which the most discriminating buyers will be sure to find something good enough for either show or breeding purposes. It has been said that the DeKalb herd is stronger in its percentage of broad, well-arched backs and strong feet, as well as in size, than any other herd of the breed in Iowa. A representative of this paper, who recently visited the farm, found a collection of brood sows such as would be a surprise to buyers of any other breed of hogs. They were big, a number of them reaching the 700-pound limit; they had perfect backs and a general excellence of conformation that was striking. Mr. Dekalb has used a great deal of judgment in the selection of blood lines and has kept the blood of Major running throughout the entire lot in such a manner as to reproduce and settle the uniformity of type and good quality which make the herd so generally attractive. The excellence mentioned is illustrated by the fact that Mr. Dekalb bred the hog, Teddy R. B., which was the only one which ever defeated the grand champion, Pat Maloy. At a combination sale held at Creston a hog of his breeding brought the high price of the offering. Last fall a gilt in his Council Bluffs sale brought $101. In later issues of this paper additional facts of interest to buyers will be presented. In the meantime, however, catalogs may be obtained which will give pedigrees in full and such other facts that may be of interest to purchasers. These catalogs may be secured by writing to H. D. Dekalb, Dekalb, Iowa.

Isenbarger Bros.' Angus Sale.

One of the good offerings of Aberdeen Angus cattle that will be sold this spring will be on March 12th, at Battle Creek, Iowa, when Isenbarger Bros. will sell thirty-six head made up of Blackbirds, K. Prides, Trojan Ericas, Queen Mothers and other popular families. These gentlemen are selling thirteen head of Blackbirds in their sale and these are just as good as they have in their herd. They always sell a good bunch of cattle and this offering is no exception to the rule. There will be twelve head of bulls in the sale, among which will be their noted herd bull, Black King of Homedale. This bull is one of the best individuals in the West and one of the best bred bulls in the country. He is a son of the mighty Black King of Woodlawn, that made the reputation of the Igo herd. His dam is Blackwood 14th by the noted show and breeding bull, Black Monarch of Emerson. He is one of the best bred Blackbird bulls in the West and he is an individual of rare excellence. Some breeder is going to buy a great herd bull there. They have retained so many of his heifers in the herd they cannot use him any longer and therefore have concluded to part with him. There will be four splendid young Blackbird bulls in the sale and these are sired by Black King of Homedale, Blackbird Barney and Black Justice 2d. One of the oldest and one of the best of these is Fairly Burly 3d. He is a son of Black King of Homedale and is out of Blackbird of Benson 37th. Fairland Brigand is a yearling by Black Justice 2d and is out of a daughter of Black King of Homedale. A splendid seven-months-old bull is by Blackbird Barney and out of Esther of Quietdale, and there are two or three of these young Blackbird bulls sired by Black King of Homedale that are going to make outstanding herd bulls when grown out. These gentlemen are selling some splendid bulls in this sale and here will be an excellent place to buy your herd bull. They are also offering some splendid cows and heifers, among which are a choice lot of Blackbirds, Trojan Ericas, K. Prides and Queen Mothers, of which we will tell you more about in next week's issue. C. E. Fuester, Battle Creek, Iowa, is also selling seven good females in their sale. Altogether these gentlemen are selling one of the choice offerings of the spring season and it will be a splendid place to buy bulls or females of this great breed. Write Isenbarger Bros., Battle Creek, Iowa, at once for copy of their catalog and kindly mention The Homestead.

The Shade Hereford Sale.

On March 6th, at Kingsley, Iowa, J. A. Shade will offer another great offering of Hereford cattle, and it should be one of the most attractive sales of the year. He is offering the largest number of good aged bulls that will sell in any one sale this year. More than two-thirds of the offering are over sixteen months old. Every bull has been held for this sale and I never have seen more quality with good breeding for the number. This is a strong statement, but he has the goods. It is a bull show sale, twenty-six in number, a grand lot throughout, including several that have done service in the herd. Rex Dorian goes in, one of the greatest sons of Dandy Rex. He is four years old and is one of the grandest breeding bulls that will sell this year and the last chance to get this breeding. Mr. Shade regrets to part with him, but his herd is much the same breeding. He sired Beau Albany, that sold in his last April sale to L. A. Clifford, Oshawa, Ontario, Canada. He also sired the show heifer, Petunia, in the C. A. Tow herd, Norway, Iowa. Mr. Shade is also selling the grand bull, Beau Dover, as he has several cows in the herd by the same sire. He was Lot 1 in the Gudgell & Simpson October 24th sale at Kansas City. They said he was the best they had bred in years. No one is selling a better prospect for a show and breeding bull. Six great bulls by Beau Elect—Elect 4th, Elect 6th, Elect 7th, Elect 9th, Elect 10th and Beau Albany—no better to be found. Beau Elect's first three bull calves sold last spring, all under a year; two were top of sale. One junior bull calf sold privately to L. A. Clifford, president of the Canadian Hereford Cattle Breeders' Association. Monarch 9th will make someone a great herd bull. Four of the best cows in the sale are bred to him. Others of their equal are Beau Matchless by Beau of Shadeland 35th, Mathew by Beaumont Jr. and Duke of Dudley. Belfast will make someone a grand bull by the great breeding bull, President, sold in Mr. Shade's last sale to head the Geo. Leigh herd at Aurora, Ill. Fourteen great cows with calves at foot and bred again. Ten of the calves at foot are bulls of nearly serviceable age. This includes Delight 3d, the two-year-old champion cow; Lady Lavender by the champion bull, Castor; Geraldine by Young Beau Brummel, nearly a full sister to the champion, Scottish Lassie. For a further attraction Mr. Shade is listing Petonette by Beau Brummel, without doubt one of the best cows of the breed. Ten grand two-year-old bred heifers, as good as you ever saw, are in one lot. It is a high-class show throughout. It will be worth your trip to Shadeland to see them. There is a bright future ahead for the man who has stood by his beef herd. When writing kindly mention The Homestead. See advertisement elsewhere in this issue.

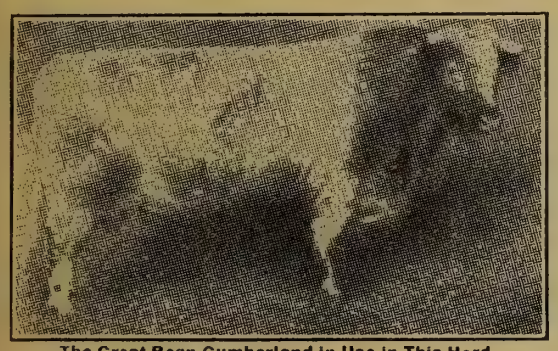
Imported Belgians for Sale.

R. F. French, Independence, Iowa, a well-known importer of Belgian stallions and mares, writes under recent date as follows: "For the next thirty days I am offering the stallions and mares of my October importation at very close prices to make room for my spring importation. I still have some of the best on hand and can show the

GREAT DRAFT SALE of SHORT-HORNS

WILL BE SOLD FROM THE HERD AND AT THE FARM OF

H. SMITH & SON, TOBIAS, NEB., ON TUESDAY, MARCH 18, 1913.



The Great Roan Cumberland in Use in This Herd.

THIRTY-EIGHT head of very choice cattle will be offered. They include thirty cows and heifers and eight bulls. The offering is practically all of our own breeding, and by far the greater part of the offering sired by the great and only **GOLDDUST,** one of the best sires central Nebraska has ever had. The females of breeding age are bred to or have calves at foot by **ROAN CUMBERLAND,** a son of Cumberland's Last. We show herewith a likeness of Roan Cumberland. The young bulls are of serviceable ages, and the entire offering is of good pedigree, many are Scotch. Arrange to attend this sale. We want you to be with us. Send for a catalog today, and when writing mention The Homestead. Address

A Daughter of the Great Golddust, Included in This Sale.

BELLOWS & THOMPSON, Auctioneers.

H. SMITH & SON, TOBIAS, SALINE COUNTY, NEBRASKA.

SHADELAND HEREFORD SALE, KINGSLEY, IA., THURSDAY, MARCH 6

The greatest lot of cattle ever sold from our farm. 50 head. 26 show bulls of the highest class and most fashionable breeding, 24 cows, 14 with calf at side and bred again, 10 two-year-old heifers.

The Kind We Breed at Shadeland, All Sons of Beau Elect, Some Promising Herd Headers. The Picture Shows the Smallest Bulls in the Sale. The 15 Older Bulls are the Same Type.

THE grandest lot of young bulls that ever left **Shadeland Farm** go into this sale. Both **show and breeding bulls** of the highest order, with exceptional uniformity and unsurpassed breeding. All of serviceable age, **from 16 to 24 months.** None have been sold and the best go into this sale. There will be **14 of as good cows with calves at foot** as were ever listed for a sale in the West, and these are all bred again. **Ten of the calves are bulls of nearly serviceable age. Ten of the very best heifers in the herd have been reserved for this sale,** and some of these will make show heifers for the fall fairs. If you are on the market for Herefords come and spend a day at **SHADELAND FARM,** the finest in the West. Parties attending the Funkhouser-Gabbert combination sale on March 4th and 5th can leave Kansas City on the Missouri Pacific at 10:35 p. m. March 5th, reaching Sergeant Bluff, Iowa, at 10:40 a. m., where there will be an extra train awaiting them to reach Kingsley at 11:30 a. m. March 6th. Through sleeping car accommodations from Kansas City to Sergeant Bluff. Parties from the West can leave Omaha at 7:45 and Council Bluffs at 8:00 a. m. the morning of the sale. Col. Fred Reppert and assistants, auctioneers. Write for catalog at once, mentioning The Homestead.

J. A. SHADE, Kingsley, Iowa.

MARCH POLAND CHINA SOW SALE

M. F. O'Hern TUESDAY, MAR. 11 Barnum, Ia.

40 Head including 15 Tried Sows, 4 Fall Gilts, and 21 Spring Gilts.

BRED for April farrow, some for later, making the proper time for farmers who are wanting more sows for the next year. This is a sale which it will pay the farmer to attend for the sows are good ones and you can get them at the prices you want to pay for them. The sows are Chief's Wonder 2d., a boar that carries some of the best of the old Harvey Johnson blood, and a good individual of the most useful type. Some of the old sows, Osborne's Queen, Osborne's Queen 2d., Tecumseh Lady 3d. and Ideal Queen, especially, are good enough for any sale, and the most of the gilts are descendants from these sows and their kin. The sows that will be sold are the medium type, and come from stock that have always brought big litters. The sale will be held at the farm two miles southwest of town. Get a catalog mentioning The Homestead when you write. Col. F. F. Luther, auctioneer, Ray L. Gribben, and C. C. Carlin, field men.

When writing to advertisers please mention The Homestead

prospective buyer of a stallion or pair of mares, the best that were imported last year. I do not import any second-rate stallions or mares, as my motto is: 'The best are none too good for the Iowa farmer.' I have several prize winners in Belgium and also several Iowa State Fair winners for sale. I give a guarantee that is on the square. You are sure to buy if you come and see my horses. Do not do yourself the injustice of not seeing what I can show you if you want to buy a Belgian stallion or mare with quality guaranteed." Mr. French's advertisement appears elsewhere in this issue. Write him your wants, mentioning The Homestead.

—Mrs. Alice J. Morris, Big Rock, Ill., writes that she has sold nearly all her surplus cockerels, but can spare a few choice pens and trios at reasonable prices. Her White Orpingtons are of a very superior quality, the original stock being a $100 pen direct from Kellerstrass Farm. Many birds of highest exhibition quality are included in the flock from which eggs are furnished for hatching at the reasonable price of $8 per 100. She also has a splendid flock of Single Comb Buffs, eggs $5 per 100. If in the market for eggs for hatching you can hardly afford to miss this opportunity to get high-class eggs at such a low price.

Shallenberger's Great Short-horn Sale.

One of the great Short-horn events of Nebraska each season is the great sale made annually by Hon. A. C. Shallenberger, Alma, Neb. It is an event that sort of marks the progress of the years, so well established it has become. It is an event that annually marks the starting of new herds, and with a view to supplying that demand Mr. Shallenberger is listing many of the very choice things of the herd. Practically pure Scotch breeding prevails, although there are a few pedigrees that have an outcross or two in them. These so-called outcrosses of plain breeding are in reality crosses of most excellent bulls and come from a long line of noteworthy ancestors. The writer takes the stand that any pedigree is a good one that is descended from a long line of worthy ancestors and, in fact, that is the only thing that adds a bit of value to any pedigree. While the reading of these few pedigrees has been damaged a bit, yet we will have to admit that the animals are fully as good and if we face the matter squarely we will probably admit that they are just a bit improved. However, the greater part of the offering is of the purest Scotch and the lovers of the straight pedigree will find ample material here to satisfy their wants. This herd has always been particularly strong in the line of herd bulls, and included among them are many that are imported. The great Imp. Diamond Rex was among this number, also Imp. Scotch Bank, Imp. Scottish Sentinel, also the great and only Victor's Roan Duke. This last named bull was of the famous Brawith Bud family and he was got by the great Golden Drop Victor by Imp. Nonpareil Victor. The dam of Victor's Roan Duke was Imp. Golden Duchess 2d by the noted Duthie bull, My Lord by Royalist. Just now there is in use the young bull by Victor's Roan Duke called His Highness. He was a show bull of much prominence in his yearling form and we are of the opinion that if properly fitted he will be mighty interesting competition for the next season's shows. Also a young bull, Royal Peer by Victor's Roan Duke, has been some in service in the herd and he will also go in this sale. His dam was one of the very best cows in the Shallenberger herd and was got by Coming Star by Royal Victor. This last named bull will be a mighty interesting kind of a bull for those looking for a herd header. Another young bull we would like to mention in particular is out of one of the great cows of the breed today, having produced the well-known bull, Royal Rex, now in use in the R. Wilde herd; also the young bull, Royalist, in use in one of the good herds of the state. Royal Peer is a proven sire, as there are quite a few calves on the farm sired by him and they are exceptionally fine and every one of a beautiful color. He is a very attractive sort of an individual and really should meet with favor by someone in the market for a really high-class sire. A beautiful herd bull prospect may also be found in a son of Imp. Scotch Bank and out of Imp. Maud 44th by Lovat Star by the noted Lord Lovat bull, Royal Star. This is a herd bull proposition for the very best kind of a herd and should be well looked after. A choice young bull is one sired by Combination, a young bull of the Geo. Allen herd and named Combination by him for the reason that he combined more of the blood of really great sires and dams than any other bull he had ever owned. Two or three very choice young bulls are the get of Imp. Scottish Sentinel and we can only add that this bull is now at the head of the H. H. Kuper herd and is being widely advertised and becoming more and more popular each season. Bulls by him are the right sort to buy. A lot of choice cows and heifers will be included and among them are many that will appeal to those looking for the choice stuff. Nice pedigrees and nice cattle are the rule among them. Keep this sale in mind and send for the catalog today. Mention The Homestead when you write.

THE SUCCESS OF THE AVERAGE MAN.

By Elliott Flower.

Western Canada has struck a new note in the exploitation of her resources and opportunities. Time was when, like all other countries in process of development, she sent out broadcast the story of the exceptionally successful settler by way of invitation to the others. The story was true, too. Make no mistake about that. It is quite unnecessary to fake such stories in western Canada, for true stories can be had that are as wonderful as any the fertile imagination can invent. But they give a wrong impression of general conditions, especially to the unthinking. The unusual success of Jones, or Smith, or Robinson, of whom prospective settlers heard much, was accepted as fairly representing general conditions, whereas it was really exceptional. Now, the prospective settler is not only told more about the average man and less about the exceptional one, but he is specifically warned not to base his hopes upon exceptional successes.

About ten years ago I made a trip through Western Canada with a party of newspaper and magazine men, and from Fort William to Edmonton we were the guests of the Canadian Northern railroad. We gave some attention to the Saskatoon district. We made an automobile trip over part of that district, and we met a man who had arrived there a few years before and then had ony $3 in his pocket, and now had a farm of 640 acres and over 200 head of live stock. We also met the man who had raised 107 bushels of oats to the acre on a part of his land, and we heard of, but did not meet, the man who had raised fifty-five bushels of wheat to the acre on a part of his land. Likewise we heard of the man who had to borrow money to get there and now has nearly 1,000 acres of land, a $3,000 house, three barns, etc. But we did not hear anything about the success of the average man, nor did we learn what the men who had made such wonderful records on part of their land—a few acres, possibly—had cleared from the rest of it. There was also a foot on the soft pedal when it came to the question of the hardships and work required to achieve these successes.

Don't misunderstand me! All that we were told was true, but it somehow gave the impression that a man could come out there barefoot and grow a pair of shoes; that, after planting a shoe lace, he could sit down in idleness and smoke until the shoes were ripe. No one said so, but neither did anyone say anything about the hard work and privations that were the price of success. The experienced farmer would know, of course, but the inexperienced would get the idea that it was no trouble at all to make a fortune.

I went over part of the same country again last fall, giving some attention to Saskatoon and also the Goose Lake district, through which the new Calgary branch of the Canadian Northern passes, and it was then that I discovered the new note. I heard more about the average man and less about the exceptional one; more about average yields and less about record ones. When a phenomenal success or an exceptional yield was mentioned as naturally happened occasionally, it was always with a cautionary, "but that's much better than the average ye know." There seemed to be an actual disinclination on the part of the men in charge of promotion work to talk about these things; they preferred to tell of the cases of moderate success—moderate for that country, although they would have been exceptional for many localities. For instance, I learned that the average yield for a considerable number of farms—not selected, but taken as they came—was thirty-one bushels of wheat to the acre and fifty bushels of oats. Many could show thirty-five to forty-five of one and sixty to eighty of the other. The higher figures showed what could be done with the land; but the average represented what was done with it. On the previous trip there was no talk of averages.

I was also encouraged if I chose to interview any settlers to select my victims at random instead of having them selected for me, and I did so. Different men reported very different results, but they were all satisfied. Those who had done so well as their neighbors expected to do better the following year. They admitted, in some cases, that lack of experience had much to do with their relatively poor showing, and they were gaining in experience and knowledge all the time. They also emphasized something that received scant attention on the previous trip—the necessity for work, work and more work if any great measure of success were to be secured

ISENBARGER BROS.' ABERDEEN ANGUS SALE

HUNT & WEBERG'S SALE

DUROC JERSEY

BRED SOWS

DENISON, IOWA,

MARCH 4, 1913

50--HEAD--50

THIS will be one of the last sales of the year and one of the best offerings of the season. We are selling daughters of **Col. Willetta, King the Col., Model Advance, Grand Chief, C. H.'s Special, Golden Model, A. F.'s Pilot Wonder, Golden Model 17th,** and other good boars. These sows are bred to the grand champion boar **Crimson Wonder 3d, C. H. Special, Gold Dust Prince** and **Grand Chief.** Make it a point to attend this sale or send a bid. Catalogs ready.

HUNT & WEBERG, DENISON, IOWA.

Col. N. G. Kraschel, Auctioneer. M. T. White, field man for Homestead.

C. L. Thuirer's

Poland China Bred Sows

Sale Fostoria, Ia., March 11th

40 HEAD Including 5 tried sows, 7 fall gilts and 28 spring gilts, ALL BRED FOR LATE MARCH and EARLY APRIL FARROW **40 HEAD**

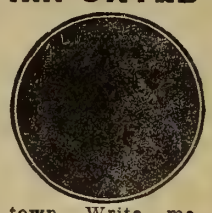
SIRED by the great **Colosso** a Minnesota winner, and before we lost him pronounced one of the best boars in this part of the state. Some by Thuirer's Big Orange, a grandson of Big Orange by one of Big Orange's greatest sons—Crow's Kind. The Colosso sows will be safe in pig to the Big Orange boar. Some are bred to Pioneer Price, a Pioneer Chief Price boar, and Thuirer's Hadley by Barker's Hadley. These sows and gilts are thrifty and healthy, good size, all carrying best of breeding. Take advantage of this last chance for good bred sows.

Col. H. S Duncan, Auct. **C. L. THUIRER, Fostoria, Iowa.**

Ray L. Gribben, field man.

HORSES.

IMPORTED BELGIANS



I recently returned from Belgium with another importation of stallions and mares. I have over 40 head of big, drafty, heavy-boned stallions and mares that will be priced right. Farm near town. Write me, mentioning The Homestead.

R. F. FRENCH, INDEPENDENCE, IA

SHIRES

TWO GOOD STALLIONS and FOUR MARES for sale. Write for information and price.

ROBT. JARMAN, Carlinville, Illinois

EVERYBODY'S DOING IT! DOING WHAT?

Going to FRANK L. STREAM, Creston, Ia., and buying an imported or home-bred Percheron, Belgian or Shire Stallion and Mares.

Home-bred registered stallions, $300 to $650; imported stallions and mares at reasonable prices. Come to a Real Horse Market and see more stallions and mares than at any point in America.

Reference: Any bank in Creston.

FRANK L. STREAM, Creston, Iowa

Please mention The Homestead when writing.

SHIRE AND PERCHERON STALLIONS AND MARES

IMPORTED animals that have been over long enough to be fully acclimated and in thrifty condition, good horses with show quality at reasonable prices. We can suit critical buyers and invite personal inspection. Will meet buyers at C. R. I. & P. or Interurban Ry. if notified. H. P. Wilkinson & Bros., Mitchellville, Ia.

SHIRES

SOME of the very best of the breed. Stallions and mares. Our prices attractive, our horses must please, also our terms.

Fresh importation. Catalogue FREE.

DUNHAMS, Wayne, Du Page County, Ill.

HORSES.

German Coachers

SEVEN or eight head of the very best this breed can show, stallions, mares and colts. An ideal general-purpose breed and we offer this stock at reasonable prices. Write us about them. Address

HELD BROS., - Hinton, Iowa.

PERCHERON STALLIONS

FOR SALE. One imported 6 year old, one home-bred 4 year old. Extra good ones. Good breeders.

SMITH & BAUMERT.

Postoffice, R. 1, South English. Keokuk county, Ia. Stations—South English and Harper, Iowa.

BREEDER OF PERCHERONS AND BELGIANS

I HAVE now for sale a number of stallions ranging in age from three to seven years. Some are home bred and others are imported. They weigh from 1,900 to 2,300 pounds. Prospective buyers are invited to make a personal inspection of these horses. Terms reasonable. I have one three years old and weighing 2,400 pounds.

P. J. EGGERS - Denison, Iowa.

WHAT KIND OF COLTS

WILL your mares drop this spring; pure breds worth $175 to $275 at weaning time, or grades for which you will be lucky to get $100 at same age? Starting right doesn't cost so much as you imagine. t costs no more to rear pure breds than "scrubs."

Purchase Percherons

Free Bulletin C on request. Wayne Dinsmore, Sec'y Percheron Society of America, Union Stock Yards, Chicago.

Royally Bred Clydesdale Prize Winners

2 stallions, one a full brother to the state fair winner, Forest King; the other, a yearling, by him. They have size, big flat bone, good feet, are drafty types. One mare, the dam of the young horse, and a good one. I guarantee them to be right in every way. Address JAMES PEDLEY, Britt, Iowa.

FOR SALE

HOME-BRED registered Percheron stallions and mares. Also standard bred, both sexes.

FOR SALE—An English shire stallion and a Missouri-bred jack. Good breeders. Sure foal getters. Prices reasonable. L. B. Cummings, Clearfield, Ia.

High Prices for Shires.

In a telegram received from J. H. Truman, Whittlesea, England, by the Pioneer Stud Farm, Bushnell, Ill., is conveyed the information that at Lord Rothschild's sale, held at Trigg, England, February 14th, thirty-two Shire colts and fillies, running in ages from yearlings to three years old this spring, sold for an average of 454 guineas, or $2,288. The colt champion, Goalkeeper, that was junior champion at London last year, topped the sale at 4,100 guineas. This is a world's record sale.

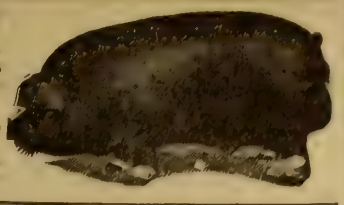
Choice Hereford Bulls.

W. T. Willis, manager of the Funkhouser Estate, Plattsburg, Mo., is selling in the Kansas City Hereford cattle sale on March 4th and 5th nine bulls and six heifers. Mr. Willis calls special attention to Cromwell 6th, Cromwell 5th, Rex Onward 14th, Onward Lad 41st and Onward Lad 43d as being among the choicest things produced in the herd in recent years. R. T. Thornton, 1309 E. 15th St., Kansas City, Mo., manages the sale and will take pleasure in mailing you a catalog if you have not received one.

POLAND CHINA SWINE.

W. H. COOPER, LIVE STOCK AUCTIONEER

THE fact that I am selling for many of the best breeders of today is ample evidence of my ability to get the value of your property. I am arranging sale circuits, making dates for next season's business, now. If my services are desired to conduct or assist in your sale would be pleased to give you dates and terms.



DON'T FORGET, WE BREED AND SELL BIG-TYPE POLANDS We will sell now some AUGUST boars and gilts, sired by our 860 pound two-year-old boar, BIG BONE 2d, and out of sows weighing 650 to 800 pounds. These at $20 each while they last. If you want some send your check with the order. You can send them back and we will return your money if they don't suit. Can furnish boars unrelated. Address W. H. COOPER, HEDRICK, IOWA.

CLOSING OUT POLAND CHINA SOWS

I AM offering all my noted big-type brood sows for sale at private treaty. Forty head, daughters of Chief Price 2d, Monarch Chief and other noted boars. DANNEN & LOWREY WILL SELL

50 Head of Percherons

AT MARSHALLTOWN, IOWA

THURSDAY, MARCH 6th

THIS offering comprises some of the best in breeding and quality ever put through a public sale, some of them having been shown at Des Moines, Sioux City, Dakota and Minnesota State Fairs, winning everywhere. Among them is the four-year-old stallion, Jambameau 82337 (83856), first-prize winner at the great show at Minneapolis, 1912. This offering is young, clean and nearly all imported. Their pedigrees inspected and passed by the French and American governments. Thirty-eight of these are mares, and all old enough are bred to the best imported sires. All stallions offered, with one exception, are imported, and were selected with the same care we would use in picking one for our own use. Address for catalogs

R. C. DANNEN Marshalltown, Iowa, or H. C. LOWREY, Nevada, Iowa.

Sale to be held in Harmon's sale barn, Marshalltown. Auctioneers, Col. P. McGuire, Col. John Garris.

Frank Iams' Draft Stallions and Mares

are **"up to the minute."** They are the **"drafty, big-boned type"**—**"nifty, big black boys"**—the **real "medal winners"**—sensational **"show and business horses"** of note, **"ripe peaches." Big, classy "peaches and cream" "black boys."** The **"Iams brand"** of **"top notchers."** Iams' **importation** of **Percheron** and **Belgian stallions** and **mares** are in the **"pink of condition"** and ready for a **"good selling." "Ikey boy,"** smile **sweetly,** and hundreds of Iams' satisfied customers **"will sit up and take notice"** that **Iams,** the **"king pin"** horse importer, is still **"doing business"** at the **"old stand." Iams** is **"pushing"** his horses to the front. The big **"peaches and cream"** "boys and girls" are **attractions** that can't be overlooked. Iams **mesmerizes** buyers with **"real drafters"** at **"bargain prices"** and having the **"horses as advertised."** Iams' **"competitors"** and **"hammer knockers"** are **"boosting** Iams" by their "knocks," until **now** he is **known** as the **"millionaire horseman,"** and on **"Easy Street,"** and growing fast. **Ikey, "buzz around" and sing Iams' song.** He is selling these **"aristocratic," fancy "black boys" cheaper** than ever—or **better** horses **for less money—$1,000 and $1,400** (few little higher). Iams has

"Ikey Buyer's Best" "Wise Guy"—Buy "Show Horses" of Iams—who has crossed the Ocean 50 times for horses and sold 5,444 Registered Horses, "Iams' 31 years of success" make him a safe man to buy from at Special Low Democratic Prices. "Everybody's Doin It"

80 PERCHERON AND BELGIAN STALLIONS AND MARES 80

They are **"model drafters."** They are 2 to 5 years old, weigh 1,700 to 2,500 pounds, 80 per cent blacks, 50 per cent ton horses. All **"registered," approved** and **inspected** by **governments** of **France** and U. S. and **certificates "stamped O. K." Iams** gives a **"certificate** of **soundness and health"** with each horse—signed by a **"Nebraska State Deputy U. S."** Many **Paris "prize winners"** and **"gold medal horses."** Big, **drafty "top-notchers,"** with big bone, quality, style, finish and **action to burn.** They are **"eye openers"**—larger and better horses than seen **elsewhere.** Big **"business propositions"** that make **"the wheels work fast"** under a **"buyer's hat." "Georgie, dear,"** Iams made a **"big killing"** by buying his horses in Europe. **"War scare,"** "bad crops," **"close money"** and **"Iams' cash"** caused the **"prize winners"** and **"tops"** to be thrown on the **market** for a **"good selling."—Iams "cut the melon"** and bought the **"rippers"** at **"knockout prices." Iams** will give his customers the benefit of his **"good buy." "Ikey boy," come on down town"**—see Iams—"Everybody is Doing It."

Get into Iams' "get rich wagon" and save $1,000 on a "top stallion"

(and you wear the diamonds). Iams is a **"big fly in the jelly"** in the horse world. "He keeps the gang guessing." **Iams** sells "imported horses only"—(they win 90 per cent of prizes at big horse shows). No **American-bred full bloods"**—no **"auction stuff"** or **"peddlers' horses"**—only **"choice drafters" of big size, bone, quality** and **finish. Iams** has the **"crack stallions** and **mares"** you **"read about."** Buy horses of **Iams** and you won't **"get stung"** in **horse** or **price. "Dolly D.,"** waltz me around **once** again, **"Ikey,"** land me at **Iams' box office** and **importing barns.** Full to "the roof" with **"black boys"** (and all must be sold). **Reduced prices.** All the world knows Iams and his **"peaches and cream" horses.** 1913 **promises** to be a **bumper** year to **Iams** and **his customers.** He saved **$300,000 to stallion buyers in 1912. Watch "Iams' smoke."** Iams' 31 years of **successful business** make him a **safe man** to do business with. **Iams sells horses "on honor."** A boy or a lady can buy as cheap as a man. **Iams' 1913 horse**

Catalog is an "eye opener." It has a "laugh" and a $1,000

bargain in every line. A **"bunch of gold"** to stallion and mare buyers. It is full of the real **"peaches and cream"** stallions. It is the **finest, most elaborate and original up-to-date horse book** in the world. Iams, the **"square deal" horseman,** makes every statement in **ad** or **catalog good**—or you get the $500 he **hangs up. Iams** guarantees to sell you a **better**

Imported Stallion at $1,000 and $1,400

(few higher) than are **sold** to **stock companies** for $4,000. Imported mares, $700 and $1,000. Iams gives **60 per cent** breeding guarantee; **pays freight** on horse and **fare** of one buyer. He can furnish $1,500 insurance. **Iams buys** and **sells every stallion himself. Saves buyers $1,000 in middlemen's profits.** He buys stallions by **"train load."** He speaks languages—(saving 20 per cent). He is **not** in the **"stallion trust."** No **partners** to share profits. He **"pays cash"** for his horses—and sells **"topnotchers" by "hot advertising"** and having **"the goods." "Big Ikey,"** leave your "happy" home and buy a **"top"** stallion or pair of **imported mares** (of **Iams**) that bring colts that sell at **$500 each. "Papa,"** don't let those **"auction men" "hand you a lemon"** in one of those **"so-called" "American full bloods"** of **questionable breeding.** Buy an **imported horse** of **Iams,** the **"reliable horseman."** (Then we will **"all wear diamonds."**) Iams' **"selling clothes" fit all buyers. Write for Iams' million-dollar horse catalog.** Iams won't let you go without a **peaches and cream** stallion or mare. **"He sells the horses."** Iams' guarantees are backed by **"half million dollars."** References—1st Nat'l and Omaha Nat'l Banks, Omaha; Packers Nat'l Bank, So. Omaha; Citizens State, 1st State and St. Paul State Banks, **St. Paul, Neb.** Iams buys big ad space because it is cheaper than flannel-mouthed horse salesmen.

Auctioneers: BELLOWS and MANIFOLD.

REGISTERED PERCHERONS French Draft Stallions and Mares AT AUCTION

Battle Creek, Iowa, Friday, March 7th

THIS is a closing-out sale and will include two of as good heavy weight imported Percheron stallions, age 6 and 7 years, as can be found in any importing barn, and have proven good breeders, the balance are mares in foal, fillies and stud colts from the above sires, 12 head in all. This is an unexpected sale. On account of a recent illness will not be physically able to handle them, for that reason I haven't time to make catalog. Registers furnished with each animal.

V. D. WOLCOTT, - BATTLE CREEK, IOWA.

P. McGUIRE and F. O. CUBBAGE, auctioneers.

TRUMANS' PIONEER STUD FARM, BUSHNELL, ILLINOIS.

HOMEWOOD STOCK FARM PERCHERON, BELGIAN, SHIRE STALLIONS AND MARES

Now is the time to buy a good stallion or mare. We have the kind you have been looking for. Our horses arrived home in October, are now perfectly acclimated and in the best of condition to do you a lot of good. The Percherons are two and three years old with size, bone and draft horse qualities, many of them weighing over a ton and not fat.

Our mares are of the best brood type. All are in foal and plenty of ton mares to select from. Every animal guaranteed sound and a satisfactory breeder. Others say we have the best bunch of two-year-old Percherons they ever saw. You will say the same. Come and see us or write for full particulars. You will find horses right, terms right and prices below others of equal merit. We have also a lot of big, heavy-boned American-bred stallions at surprisingly low prices. Don't buy until you have seen our stock. Homewood is on the main line of the Big Four and I. C. R. R., twenty-three miles south of Chicago. Trains hourly to and from the city.

S. METZ & SONS, HOMEWOOD, ILLINOIS.

W. A. LANG & CO.,

Greeley, Delaware County, Iowa.

Importers of BELGIAN and PERCHERON STALLIONS and MARES.

We wish to announce to the buying public that we will now, as in the past, give you more good, sound, young horses for the money than you can get elsewhere. We do not advertise cheap stock because we do not think the best breeders want that kind, but we will sell you the good ones at as reasonable margin of profit as possible, and do a remunerative business. All horses are backed up by our GILT EDGE GUARANTEE. Write for full particulars.

The Wonderful French Machine Sold in America for First Time

GREATEST
Cream Separator Offer!

The Melotte Cream Separator—Guaranteed for 15 Years

The Genuine French Melotte Sold in America for First Time

This is positively the first bona fide, no-money-down offer ever made on any cream separator. No manufacturer of any cream separator ever ***dared*** to make such a startling offer before. All others who have ever ***pretended*** to offer you a free trial or to send their separator without any money down have taken care to get ***something*** out of you first.

But we don't want ***anything.*** All we ask is your simple request. We send the cream separator direct to your farm absolutely without any money down. We can afford to do this because the Melotte sells itself. It has an absolute self-balancing bowl.

We want you to read every word of this great offer. It is an offer which, we think, proves our ***absolute faith*** in the great ***Melotte Cream Separator.*** You are given the opportunity of seeing just how much cream this marvelous separator will extract from your milk before we ask you to send us one cent. You never saw another manufacturer who was so open-handed in his offer. The reason is that no other manufacturer ever wanted you to know ***all*** about his machine ***before*** paying him anything. We want you to know all there is to know because we know that we have the separator that is right. The principle of the Melotte has been ***proven*** to be right in the greatest dairying countries in the world. Now, read every word of this wonderfully liberal offer.

Sent Without a Penny Down

30-Day Free Trial!

Your simple word that you would like to see this cream separator in your own barn or dairy house brings it to you instantly. We send you the Melotte without a bit of quibbling or hesitancy. We neither ask nor want you to send a penny. We don't want a cent of your money. The Separator goes direct to you. You set it up, give it a thorough test with the milk from your own cows. We give you a free trial that *IS* a free trial in every sense of the word. It is a free trial because we don't ask you to pay us any money down—there is no C. O. D.—no lease nor mortgage. You keep your money right in your own pocket. You pay nothing to anybody.

Some people PRETEND to give you a free trial, but they ask you to give them your money first. We are not afraid to let our separator speak for itself. Test the Melotte Cream Separator in every way, watch your profits go up, watch the increase of the amount of cream, then, if you do not believe that you ought to have a cream separator, just send it back at our expense. If, however, you decide to keep this genuine Melotte—the peer of all cream separators—the separator that gives you greater profits than any other—makes every cow you have give you 100% greater value and insures you greater profits from your dairy than you ever made before—we will allow you to keep it on extremely easy

MONTHLY PAYMENTS

These payments are so small that you will hardly notice them. You only pay out of your increased profits. You don't need to be without a cream separator when you can have the separator right in your dairy house while you are paying for it. In reality you do not pay for it at all. It pays for itself.

This is what we want to demonstrate to you. We want to demonstrate and prove beyond all peradventure that the Melotte Cream Separator does pay for itself. Only a few months' use of a Melotte Cream Separator and you will be satisfied that this statement is ***absolutely correct.*** A few months and the separator has paid for itself. It does not cost you a penny because the increased amount of cream has paid for the machine.

Send the Free Coupon now —Today!

Don't delay

We don't want to tire you with a long discussion of how our cream separator is made here. You can best understand this if you will let us send you our free catalog. Besides this free book we have another book which we should like to put into your hands.

Valuable Book
"Profitable Dairying"
Sent FREE!

Send Today! It Brings the FREE DAIRY BOOK

Just ask for this book and it will be sent to you. It is free. Place your name on the coupon, cut it out and mail it at once. Then we will send you our great free book, ***"Profitable Dairying,"*** telling you everything about cows and dairying, butter and cream—how to feed and care for cattle, how to make them twice as valuable as they are now, how to make more money than ever before out of your cows. This book is written by two of the best known dairy scientists in the country—Prof. G. H. Benkendorf, Wisconsin Dairy School Agricultural College, Madison, Wis., and K. L. Hatch, Winnebago County Agricultural School, Winneconne, Wis.

We will also send you Our FREE Catalog, describing fully the great Melotte Self-Balancing Bowl Cream Separator and telling all about our liberal terms. Find out all about our liberal terms. Find out about these terms anyway, even if you don't expect to buy a cream separator *just now.* Remember—no money down, free trial and easy payments—and we let the separator tell its own story. You see with your own eyes why we can afford to guarantee this separator for 15 years. The most sensational offer ever made in connection with a cream separator. Our catalog tells all about it. Don't delay. **Sign the coupon RIGHT NOW.**

Melotte Runs 54 Years!!

At the Melotte works one of the Melotte Separators has been working every day (driven from the shafting) since Nov. 5, 1900, running 10½ hours per day—or 19,687 hours at a cost of only $7.50. Reckoning that a farmer works his separator one hour per day, the 19,687 hours represent (on the farm) a period of 19,687 days, or nearly 54 years. Therefore, the total cost of maintenance for the Melotte separator for 54 years, inclusive of oil, will be only $7.50. At great trials of separators held at Boulogne, France, Oct. 5 to 9, 1905, under the auspices of the Federated Agricultural Societies of the North, the Melotte easily vanquished all other separators—proving the cleanest skimmer and taking less power—and was **Awarded the Gold Medal.**

World's Grand Prize Winner

Here is a small Percentage of the First Prizes the Wonderful Melotte Has Won:

1888—Brussels—International Exhibition—Progressive Prize.
1889—Tongres—First Prize.
1890—Brussels—First Prize.
1891—Louvain—Diploma of Honor.
1892—Bouchout-lez-Anvers—First Prize.
1893—Theux—First Prize.
1894—Weert—First Prize. Medal of Higher Merit.
1895—Vienna—First Prize.
1895—Drontheim—Silver Medal. First.
1896—Patay—First Prize. Gold Medal.
1897—Rennes—First Prize.
Brussels — World's Exhibition. First Prize.
1898—Lyons—First Prize.
London—First Prize.
1899—Poitiers—First Prize.
1900—Northants—First Prize.
Paris Gold Medal and First Prize.
1901—Vise—Diploma of Honor.
Marchin—First Prize. Gold Medal.
1902—Prague—Diploma of Honor. First Prize.
1903—Reggio-Emilia—Diploma of Honor. First Prize.
Aussig—Gold Medal. First Prize.
1903—Luxembourg—Gold Medal. First Prize.
Reims—First Prize.
London—Gold Medal. First Prize
1904—Heyst-Op-Den-Berg—First Prize. Gold Medal.
1904—Vouneuil S Vienne—First Prize.
St. Louis—First Prize.
1905—Bombay. First Prize.
Durban. First Prize.
Orleans. First Grand Prize.
1906—Milan. First Grand Prize.
Tours. First Prize.
1907—Amsterdam. First Prize.
1908—Starodour. Grand Prize.
1909—Saint-Gilles-Termonde. First Prize.
1910—Axel. First Prize.
1911—Sinay. First Prize.
Brussels—Grand Prize and First Gold Medal.

And no wonder all these prizes have been won! For the Mellotte is different (and better) than any other separator in the world. The bowl turns on a single bearing and is positively self-balancing. The cream and milk chambers are made of white bath tub enamel—not tin. Bowl self-draining. Get free catalog today.

Test With Other Machines

Before you decide to buy any Cream Separator arrange to test a MELOTTE along side of the machine you now think is the best separator in America. We want you to do this. Then there can be no doubt in your mind as to whether you are really getting the best machine. This is the only way to buy a cream separator. Then it will not be necessary to take anybody's word.

You'll know which machine turns easiest—which machine is the best made. You'll know which skims the closest. You'll know which will make you the most money.

Write to us about the MELOTTE and the MELOTTE FREE TEST today. We are the sole factory representatives in America.

These Only Are The Cars You Should Buy

HUDSON MOTOR CARS

While there are approximately 250 different makes of automobiles on the American market, it is not so difficult to choose a car that will prove satisfactory. Your neighbors tell you of their experiences. The dealers speak in highest terms of the cars they sell. You are appealed to from practically every angle to consider the advisability of this car and that car.

But in all this there is apt to be much confusion as to what car can really be trusted unless you bear in mind easily understood conditions that often result in selecting the very car you should not have bought.

If you will bear these facts in mind in weighing the guarantee of each car it will save you much worry.

These Are The Cars You Should Not Buy

Cars offered at a cut price should never be purchased. Just think what effect a cut price has upon the second-hand value of the car when you want to sell it. In reality the apparent price reduction means no more, so far as actual value is concerned, than does the offer of a quoted $25 suit of clothes at $14. The suit never was worth $25, it is out of date or the dealer is losing money.

If the dealer is so poor as a business man that he will sell cars at no profit, he is an unsafe man with whom to trade.

Every time a dealer fails he does inestimable injury to the manufacturer in shaking the confidence of the people of the community in the car and also depreciates the market value of your car.

Be sure also that the manufacturer is prosperous. Be sure he has had years of successful experience. New companies may have a well-designed car, sufficient capital and the intention to give generous values, but are unable to always produce just what they intend because a smoothly working organization of men cannot be quickly perfected.

A Car You Can Trust

Howard E. Coffin, America's foremost engineer, and his board of engineers—48 in all—combined in building the new HUDSONS.

The "37," the four-cylinder car, is a masterpiece of its type. The "54", a Six, is offered as the equal of any motor car ever built at any price.

Road performance, comfort of riding, deep, luxurious seats, small maintenance cost, long service without attention further than lubricating and cleaning are distinctive qualities.

With 48 experts, each a specialist in some feature of motor car construction, you can see how improbable it is that anything essential to value, comfort or service can have been overlooked.

Several thousands of these cars are now in the hands of owners. They are giving satisfactory service over every kind of road. Many have been driven thousands of miles without even requiring the use of a screw driver, wrench or hammer to make adjustments or repairs.

Don't expect to buy a HUDSON at a discount. You must pay just what your neighbor pays—no more, no less.

Send for catalog of either the "37," which sells at $1,875, or the "54," the Six, at $2,450. The prices are f. o. b. Detroit. Or go to a HUDSON dealer and he will prove their value in a hundred different ways.

Bodies for either car are furnished in Touring car, Phaeton—five-passenger—and two-passenger Roadster. Cars are fully equipped with electric self-starter, electric lights, speedometer, clock, windshield, top, demountable rims, extra rim, tire holder and everything needed ready to operate.

Important Notice.

All the leading makers find this year, because of the unusually fine weather of the past winter, that they have more orders than they have cars.
Therefore whatever car you choose should be ordered now. Otherwise you will not be able to get any of the makes it would be safe for you to buy.

Proves That Dairying Is Profitable

How Col. W. H. Phelps, Member of the Missouri Legislature, Has Established a Model Farm Which is an Object Lesson of Success.—*By A. A. Coult.*

ONE of the most modern dairy farms of the grain belt has been established near Carthage, Mo., by Col. W. H. Phelps, a member of the state legislature and a well-known stockman. Dr. A. Knight, state veterinarian and dairy commissioner for British Columbia, recently spent three days at the farm, studying the methods of housing the cows, caring for their health and handling the milk. He came to Missouri to study the intradermal test for tuberculosis, as Missouri leads all others in this country in that particular line of precaution against the disease. He requested the privilege of making an extended visit at Colonel Phelps' Meadowmere Dairy Farm, as it had been especially called to his attention. He now is en route to his home at Victoria, British Columbia, and is going to advocate to the dairy interests in his country some of the ideas he saw demonstrated at that farm.

During October, 1911, Dairy Commissioner Cutler spoke at the Jasper County (Missouri) Corn Carnival and pointed out to the farmers the benefits which would be gained by each one individually, and the community at large, if they would raise more dairy cattle on their farms and sell the cream or milk and save the fertilizer. As Colonel Phelps was developing a new farm near town, he was shown that the dairy business would build up the farm faster than any other method of operation, and he promised to go into the business on a large scale if a creamery could be obtained for Carthage. The necessary arrangements were made for starting a creamery and Colonel Phelps began to build dairy barns, silos and pig pens. He sent expert judges of Jersey cattle throughout the state to buy the best that could be obtained, and now owns a herd of seventy-nine head, fifty of which are registered. His milking barn accommodates forty cows and he keeps the dry cows in a barn on another farm. The calves and young heifers are housed in another building on the main farm. He is now making preparations to build another large dairy barn on his farm. He has all of his stock tested for tuberculosis. Every convenience for doing the work has been installed and the cows are milked by machinery, at the rate of twenty cows an hour. The litter is carried out in a large metal carrier suspended from a track back of the cows, to a manure spreader shed several feet removed from the barnyard. The heavy manure is hauled to the field and distributed every day. The liquid manure drains off through sewers into a concrete well outside of the barnyard, so that not a drop of the valuable fertilizer is lost. From the well it is pumped into tank wagons and sprinkled over the alfalfa fields.

THE MODERN WAY OF CLEANING OUT A BARN; THE LIQUID MANURE DRAINS TO A WELL OUTSIDE.

The milking barn is 101 feet long by forty-two feet wide, fourteen feet high to eaves and thirty-three feet to gable. The loft has space for 150 tons of loose hay, with modern facilities for elevating the hay into the loft and for distributing it to the cows as they require it. The walls of the barn are of rock and cement, eighteen inches thick, set with numerous windows and doors. The barn is ventilated by a system which provides plenty of pure air without causing any drafts. At the west end of the first floor is the office, where the daily record of milk production and per cent of butter fat from each cow is kept, together with the cost books of feed, etc., and next to the office the room containing the machinery necessary for separating the cream, making the individual butter fat tests, and for running the milking machines.

Each cow's milk is weighed as soon as drawn, a sample taken for the tester and the remainder immediately run through the cream separator. The cream is placed in the refrigerator and the skim milk is fed to the calves and pigs before it gets cold.

Two large silos on the north side of the barn have a capacity of about 300 tons of ensilage. The silos connect with the barn through a feed room, so that the entire work of feeding, watering, milking and cleaning can be done without going outside of the building.

The water supply for the farm is obtained from a deep well, pumped into a large water tank which is high enough to supply by gravity the water to the farm residence, and all the main farm buildings.

As there was more rock on the farm than could be disposed of without large expense, Colonel Phelps used part of it in building about half a mile of stone fences around the barn lot. The fence is four feet high and eighteen inches wide. The setting of the stone barn surrounded by stone fences makes an attractive picture and Meadowmere Dairy Farm has suddenly become the show place of Jasper county and surrounding country. Large numbers of visitors in automobiles and carriages visit the farm on Sundays and a week ago Colonel Phelps had to leave his own automobile outside, as the yard was filled with conveyances containing sight-seers.

But Meadowmere Dairy Farm has also become a demonstration farm, for Colonel Phelps has shown the farmers that the rock-studded, sour land which has not grown a good crop of weeds for years can be made very fertile by removing the surface rocks, putting plenty of ground limestone on the land to cure the sourness, and underdraining it to keep it in good

(Continued on page 37.)

COL. W. H. PHELPS AND SOME EVIDENCES THAT SCIENTIFIC DAIRYING IS ALMOST CERTAIN TO BRING PROFITABLE RESULTS.

THE HOMESTEAD

A PRACTICAL JOURNAL for the FARMER, STOCKMAN, FRUIT GROWER, POULTRYMAN, GARDENER, and HOUSEKEEPER

JAMES ATKINSON, Editor-in-Chief

ESTABLISHED IN 1855

Entered at Des Moines Postoffice as second-class matter

PUBLISHED EVERY THURSDAY

SUBSCRIPTION RATES—Single subscription, $1.00 a year. In clubs of ten, 75 cents a year and an extra copy to getter up of club. In clubs of fifty or more, 30 cents a year. Single subscription three years in advance, $1.50; five years in advance, $2.25; ten years in advance, $4.00. Subscription price in Canada, $1.50 a year. Remit by draft, registered letter, postoffice or express money order. In changing address, send both the old and new addresses. In renewing, give the same name and initials as you gave before or state both the old and new names, and explain why you make the change. In case of errors or failure to receive the paper within two weeks, promptly notify the publisher. Address all letters to

THE HOMESTEAD COMPANY,
Des Moines, Iowa.

A RAPID RECOVERY.

Four weeks ago today (Monday) The Homestead printing plant was partially destroyed by fire, the building gutted and the mechanical departments put out of commission. The fire was a serious one. It came in the midst of the busiest season, when the largest papers of the year were to be issued and everybody connected with the establishment was working at top-notch speed. For a time such a setback as must discourage even the most courageous seemed inevitable. And yet in only four weeks' time we have made such rapid headway in recovering from the disaster that already not only is daylight visible, but the sun has risen high above the horizon. The building is once more under roof and enclosed and the next fortnight will see it in as good condition as before the fire. Car loads of fine new machinery and type are being unloaded and hauled to the building and the last of the present month will find us better equipped than ever before. Plans are already well under way for a Homestead in the future which shall eclipse, in every department and particular, The Homestead of the past. I am duly thankful, indeed, that it has been permitted us to make such rapid headway in recovering from a blow which seemed truly staggering as I stood, in the barren bleakness of a winter morning, and watched the flames on their work of destruction.

The worry and work caused by the fire of February 3d have been more than offset by the hundreds of cheering, consoling letters received from loyal friends and well wishers. I shall never forget these manifestations of friendship. I have before me one of the latest to be received, a letter so characteristic of many others received, in its wholesome and inspiring cheer, that I cannot refrain from printing it for the enjoyment of others:

Wyoming, Iowa, February 22d. Dear Mr. Pierce: Herewith find check to pay my renewal and five new subscribers for three years each. I was very sorry, indeed, to read of The Homestead plant being burned, and am glad that it is to be rebuilt at once, as The Homestead is the best farm paper published. Every farmer in the grain belt ought to take The Homestead. Now, I am interested in other things than the Almighty dollar. I believe in education, in conservation, in good roads, not the so-called hard roads, but dirt roads constructed on a scientific basis. That is, with the water drained out or kept out from under them. In order to do this it will be necessary to establish a thorough system of tiling. The road builders and the people of Iowa generally must combine to establish a thorough tiling system and then have the surveys made by educated surveyors or persons who know how. All these things will make for the greatness of our beloved state.

Yours truly,
A. G. Alden.

Such letters as Mr. Alden's are more comfort and assistance than their writers can possibly realize, and for all such received I am indeed truly grateful. The recent disaster has disclosed many, many friends whose heartfelt words of sympathy shall remain with me long after the fire has become only a faint and indistinct memory. A friend in need is a friend indeed, and I am truly thankful that so many friends have so cheered and consoled me with their words of sympathetic well wishes. I shall strive ever and always in the future to deserve their continued confidence and support.

Sincerely yours,
JAMES M. PIERCE,
Publisher The Iowa Homestead.

A STORY OF SUCCESS.

That the Northwest and the Pacific West have been built up largely by the exploitation of instances of exceptional success is generally conceded. For every such instance duplicates could be printed showing even more striking success in the ordinary lines of farming in the grain belt. This is coming to be realized more and more, so that men are not being lured great distances by tales of fortunes won, but are devoting themselves more and more to realizing the full possibilities of land nearer home. All this by way of introduction to a story of success on a farm in northern Iowa, as printed recently in one of the prominent dailies of the state:

Nearly thirty-five years ago two men, brothers, came to Garner from Clayton county, Iowa, and bought a quarter section of land. They paid $15 per acre for it, a high price for those days, because it was close to a little town and because forty acres of it were under cultivation at the time. After a few months another brother came "to see what the boys were doing out west," and after he had looked around a little they asked him what he thought of the country. He replied that if one had his land paid for he might, by hard work and careful management, make a living. So thought one of the two who came first and he stayed. He is here yet and scattered around over a township or two are numerous sons and daughters on farms of their own which they were helped to secure by the father, who still owns something more than two sections of highly improved Hancock county land, besides large tracts located elsewhere. Hard times? Well, what would they be called when one didn't write a letter to the folks "back home" for six months because it required a three-cent stamp to pay transportation charges? Wheat dropped to twenty-eight cents a bushel once and had to be hauled to Clear Lake, sixteen miles away, at that. As late as 1896 corn had to go at seven cents a bushel unless one happened to have stock to which it could be fed. In those earlier days there was little thought of advance in land, the main theme being the making of a "living." The father and mother in this case stacked the wheat several seasons while the little tots played around in the field. Will any young farmer of this day find it possible to possess himself of 2,300 acres of land, the greater part in as fruitful a portion of Iowa as this, within the next thirty-five years, building it all up from only enough capital to buy a quarter section?

We are not inclined to agree with the statement that the possibilities within the next thirty-five years will not be as great as within the same period of time in the past. Thanks to the rapid spread of agronomic ideas and the introduction of mechanical devices, making every ounce of energy more productive, the rewards of farming are yearly becoming greater. We do not believe, moreover, that the top notch price for land, either in Iowa or elsewhere throughout the grain belt, has yet been reached and are free to pin our faith to a continued advance which shall serve fully as much as an incentive in the future as any record of achievement in the past now serves.

BREEDING BEEF CATTLE ARE NOW APPRECIATED.

Twelve years ago there were approximately 50,000,000 beef cattle in the United States. Since that time our population has increased 20,000,000 people while the number of beef cattle has been reduced to approximately 35,000,000 head. With these facts staring us in the face no difficulty should be experienced in offering a satisfactory explanation as to why good beef steak is high in price. The why and wherefore of this reduced cattle supply is another story and a number of causes are at the bottom of it all. The main one, however, is simply this: That the farmers of the United States particularly those of the corn belt have shown as yet no steadfast adherence to a fixed policy in farm affairs. High-priced grain means that good breeding stock is in many instances sacrificed while in turn a large cereal crop like that of 1912 stimulated the demand for feeding cattle. The pendulum swings one way for a time and in the opposite direction almost with a change of season.

An incident occurred in the state of Indiana last week that we believe will strengthen the faith of those who have persistently advised farmers to hold on to their good breeding cattle. We refer to the sale of seventy-six head of Hereford cattle by Warren T. McCray for the sum of $40,000, an average of $525 per head. The bulls in this sale averaged $740 per head and when the last one was knocked down to the highest bidder the demand was not fully met. This was foundation stock to be sure and the animals in the offering were of the most select and modern type. The small steer feeder on the farm with his grade herd may not consider himself in any way interested in an incident of this kind, but as a matter of fact every man who proposes to adopt a fixed policy in the production of cattle is more or less interested in the value of the highest class of pure-bred beef cattle. The blood of the various males in this sale will by no means in the future be wholly confined within the limits of pure-bred herds, but will be disseminated as the years go by with the result that the standard will be raised in the case of thousands of cattle intended for the block only.

We have always contended that the breeding of pure-bred live stock was the highest and most ennobling type of agriculture that could be carried on by any people. While at times men grow discouraged when they are obliged to sacrifice the very highest type of pure-bred cattle at beef prices, yet in the end those who persist in using the good blood and in keeping up the pedigrees of their cattle are sure to meet with financial success. While it cannot be expected that every man who is raising pure-bred cattle is going to sell his surplus at an average of $500 per head, yet as we see it a tremendous effort will be made during the next ten years as we are catching up with our cattle supply to improve the quality of the increase. If we are to come back to our normal supply of 50,000,000 beef cattle and to increase that number proportionate with the increase in population we should coincidental with this increase place much more emphasis on the use of the right kind of sires in grade herds in the future than has been the case in the past. We have faith enough in the progressive spirit of the corn-belt farmer to believe that this emphasis will be so placed and it means that those who have the high-class pure-bred cattle to fill the demand will be amply rewarded for their foresight and for the faith they have shown in the permanence and stability of the cattle industry. In turn it is an unequaled opportunity for those who have the right kind of cattle to start off the cattle industry now that it is at low ebb on a standard that far exceeds and excels anything that has been maintained in the past.

WHEN TO TURN CATTLE ON GRASS.

A Wisconsin subscriber, Mr. C. J. Griffing, gives his views on the question of turning live stock to grass, in the following communication:

I have a neighbor who turns his stock into pasture on a certain date every year. My experience proves this to be a very foolish practice, for conditions which are favorable for pasturing on a certain date one year will not exist on the same date the next year. We cannot go by dates in this matter and the safest way is to see that the land is in fit condition. In the fall, as soon as the crop is removed from the field, I turn the stock into the stubble. Here they get good feed and the regular pasture gets a rest. Thus it gets a chance to come up so that there will be a good winter protection. The stock can be turned onto such a pasture as early in the spring as the ground is firm enough. If the ground is wet and mushy much damage may be done and the pasture even ruined by the roots being cut and trampled by the sharp hoofs. Where there is much of the old grass on the pasture in the spring it is easier to make the change to pasture, as much of it is eaten with the new grass, and bowel trouble does not result, as it is very liable to when sudden change is made to new grass. The stock continue also to eat a little hay at the stables, which they will not do if pure green grass is to be had. It is important that the change be gradual, for if the bowels are thrown out of order the result will be a loss of growth, gain or production. The pasture should be allowed a good start before the cattle are put upon it, for if they start out when the pasture is poor the chances are that it cannot recover all summer. It never pays to overstock the pasture, for a close-cropped pasture dries out and becomes practically worthless when dry weather comes. Stock does a great deal of damage tramping and roaming about on a close-cropped pasture, thus adding "insult to injury." When the pasture is in this condition they are also hard upon the fences, leaning and reaching over to get the longer grass on the outside. A good pasture is one of the most valuable assets of any farm, and it pays many times to take good care of it.

While we doubt if any stockman will oppose the plan here suggested by Mr. Griffing, namely, that of allowing the soil to get firm before turning out live stock, yet we know that some will object to the plan of allowing grass to get a good start before doing any pasturing. We have known so many instances where cattle that were never turned off the pasture during the winter or spring were maintained in the pink of condition that something may be said in favor of not letting the grass get too rank before turning in. On the other hand, we have known cases where cattle were 100 pounds lighter at the end of the first month of grazing than they were when turned on grass, this being due to the abrupt change in the character of the ration.

We shall consider it a favor if some of our stockmen readers will give their views on this important matter. The issue is whether we should or should not keep the cattle out of the pasture until the grass has made a considerable start.

BELIEVES IN SHOW CORN FOR SEED.

Mr. Ray Redfern, of Des Moines county, Iowa, has clearly defined views on "type" in seed corn selection both for show and for seed purposes. He believes that in the main the best samples of show corn are alike superior for seed purposes. On this important phase of the corn question he says:

A question often asked at corn shows, institutes and elsewhere is, "Is the corn that wins the ribbons the best corn for the farmer; will it yield more than the samples not winning a place?" With few exceptions, if rightly placed, it will. What we want is the largest number of bushels of matured corn per acre, and the judge, in making his placings, looks for the samples that indicate these qualities, as those that show breeding, are uniform in size and shape of ear, well matured and heavy, good and full in central portion, indicating a strong constitution, good depth of kernel and uniform, with large, bright germs, which give the growing stalk a good start.

Corn to win in the shows today must have some brains and breeding back of it and most men who are breeding corn select from the rows that produce the most bushels of good quality corn, and in selecting the seed from these rows they select the ears that nearest approach the type that wins in the show. While the score card is not usually used by the judge, yet the main points it emphasizes is emphasized in the placing of the samples. The influences it has exerted over the breeder and grower is responsible in a large measure for the increased yield in the best varieties and for the splendid samples of fine, well-matured corn seen at the corn shows of today.

The men who are raising the samples that win are men who, as a rule, are producing large yields on their farms, much larger than the average. Seed sold and distributed from these men to farmers and neighbors often yields as much as one-third more than the corn they are growing

I have in several instances received the unsolicited testimony of neighbors and men who have purchased my seed that it yielded as high as twenty bushels per acre more than the corn they were growing under identical conditions.

The man who picks out and exhibits a sample of corn good enough to win in the large shows is of itself evidence that he produced a good yield of matured corn and that he planted well-bred seed, the kind you must plant if you want to win or produce exceptionally large yields.

In my breeding plot of 1906 Row 28 was one of the largest yielders and produced an exceptionally large number of well-matured seed ears, showing excellent breed type, and the next year three acres planted from seed from this row under field conditions yielded over 100 bushels per acre of fine corn and again a large per cent of seed.

Over 75 per cent of the corn I have shown that has won in national, state, in short courses and local shows was from this high-yielding strain of corn, which further goes to prove that the corn of the type that wins the ribbons does yield and is profitable for the farmer to plant.

It cannot be denied that corn shows and expositions have resulted in increasing the yield of corn in those communities that have given the most attention to this phase of agricultural education. Possibly at the outset too much emphasis was placed on outward appearances, but year by year it has been found that corn carefully selected in accordance with certain standards gradually crept up in yields. In due time another forward step has been taken. This involved the planting of individual ears so that seed could be selected from the high yielders only. According to the experience obtained by Mr. Redfern

quality from the standpoint of the showman is very closely associated with yielding ability because he says that from his highest yielding single row he has obtained the best show corn.

EARLY HOG PASTURE.

A subscriber, Mr. L. J. Dewall, asks for information in regard to early hog pasture. He expects to have about one hundred spring pigs and desires to sow crops so that he will have plenty of pasture up until the middle of September.

Two plans may be followed in establishing a hog pasture. One would be the sowing of about three bushels of mixed spring grain composed of wheat, oats and barley. In conjunction with this, seven or eight pounds of rape should be seeded per acre. Such a mixture if seeded early would in the course of five or six weeks after seeding be ready for pasturing. If the larger hogs could be kept off until a growth of six or eight inches had resulted, so much the better. Rape is not a rapid grower when sown in conjunction with a nurse crop, but as the cereals are pastured off the rape will come on and when it once gets a good start it will furnish a very large amount of pasturage. According to this plan pasture would be obtained earlier than in any other way.

The second plan would be to use rape alone at the rate of seven or eight pounds per acre. It should be seeded early in the spring after thoroughly preparing the seed bed. In all probability it will pay to wait until the crop makes a growth of eight or ten inches and after that point a five or six-acre patch of rich ground will likely carry through one hundred growing shoats. It is just possible that at times it will pay to turn the hogs out for a week or ten days in order for the crop to catch up, as it were, and with a little precaution of this kind rape will furnish a large amount of good food up until the period of freezing weather in the fall. While rape might not furnish as early pasture as the small grain, yet it will produce much later as it is very hardy and it does not mature, but on the other hand remains green until it is frozen down.

SPRING MARKET FOR FAT CATTLE.

There is some uncertainty among men who want to feed cattle for the spring or early summer market, as to whether conditions warrant the very high prices that have to be paid for suitable feeding cattle at this time. The action of the beef steer market since the first week in February, in its advance of nearly $1 per 100 in that time, lends confidence to prospective feeders, notwithstanding that cattle for feeding have advanced in like manner. Commission men at the markets believe there will be a strong market for fat cattle from now till grass cattle start to market, but they are slow to advise their customers to buy stock or feeding cattle at present prices. The reason for their hesitation in this respect, while believing in strong markets ahead, is the same reason that makes the men want to feed doubtful about the wisdom of the venture, simply that they are unaccustomed to having feed-lot investments mount up into such high figures as they do now.

So far as the determining evidence goes, it is nearly all one sided, and that is in favor of feeding. Not only is cattle shortage admitted to be acute everywhere in this country, by practically all authorities, but also in other cattle-raising countries. Also there is a feeding margin between the prices of feeders and of fat steers that apparently justifies the operation of feeding. According to custom it costs eight cents a pound to make feed-lot gains, but by practicing the improved-feeding methods and rations in vogue in recent years, together with the relatively low price of feed this winter, it might be possible to put on weight at less expense than that. Of course, several weeks of muddy feed lots in March would cut down gains greatly. But admitting that all conditions are favorable, and accepting the old ratio, if it costs eight cents a pound to put on weight, then feeders at $8 and fat steers at the same price balance. At the present time there is a safe margin of profit, according to this line of reasoning, between the cost of feeders and the selling price of fat steers.

Enough of the substantial farmers and feeders have settled the question in favor of feeding for the spring markets to absorb the entire supply of feeding cattle coming to the markets, as fast as they are received. In some cases they are taking cattle away from the killers for this purpose. In a great many instances the buyers are men who have already fed a drove of cattle this winter, and have sold them at a good profit. Having a fair amount of velvet to work on, they are able to view the high prices of feeders more complacently than they might be otherwise. Mr. W. H. Grassmeyer, of Cambridge, Neb., has been feeding 800 cattle this winter, which he is now marketing. He stated in an interview at Kansas City on February 24th, that he has enough confidence in the spring cattle market to cause him to complete arrangements for feeding another string of cattle, after his present lot is gone.

Mr. H. H. Hutchings, of Raymond, Ill., who was in the market a week or two ago looking for stock cattle good enough to go on farm land worth $200 an acre, said after he had made a purchase: "I have been a cattle feeder continuously for fifty years, but today I made a purchase of stock cattle at the highest price I ever paid for cattle." Mr. C. E. Speery, of New Philadelphia, Ill., takes the matter of high prices philosophically, partly because he sold some of his first feeding this winter at $11.10 per 100 pounds. He said, immediately after signing a check for $14,000, in payment for 150 head of feeding steers, bought at the stock yards February 24th: "To be sure, these feeding steers are selling at high prices, but we have got to have them."

CONSERVING HUMAN ENERGY.

Someone calls attention to the fact that the highest form of conservation applies to the world's men and women, more than to her raw material. Possibly the one is the counterpart of the other, because when the drudgery of labor (particularly labor of the farm) is removed from the shoulders of men and the same labor is more economically performed by mechanical power the indirect result must eventually be the conservation of nature's forces.

Under farm conditions there is little danger of making machines out of men, as is often the case in manufacturing, and because of this we must adapt ourselves more and more to the handling of levers rather than to the lifting of loads. It is, therefore, impossible for invention to go too far in lifting the burden from the farmer's shoulders, as it sometimes may in other industries where, as previously intimated, men are changed from humans into machines. In a very important sense every improvement in farm implements contributes to the intellectual uplift of those who take part as operators. More time for leisure does not necessarily mean better opportunity for the development of the habits of indolence, but rather it means better opportunities for social pleasures and intellectual enjoyments.

Because of the great conservation principle involved when men's energies are at stake we consider that a real service is performed when there is spread before our readers each week illustrations, accompanied by suitable descriptive matter, dealing with all types and forms of labor-saving machinery. Viewed in this light we believe that the advertising columns of this paper carry a most important message to the producer. It may be the farm tractor, the gasoline engine for general use around the farm, the automobile, the cream separator, the improved plow, the grain drill, modern fencing, the manure spreader or a thousand and one other articles that are finding a large market in the corn belt, each one an important factor in multiplying the powers of man in his effort to conquer the forces of nature. With this thought in mind, therefore, we commend to the attention of our readers the subject matter contained in the advertisements which appear in this paper. We make the same appeal to those who are not yet in position to purchase as to those who are in the market, because we claim that in an occupation like agriculture, where every man in a way competes with every other man, the individual who falls behind and eventually drops out of line is he who undertakes to do with his hands what his competitor is doing with less energy by the use of some form of modern labor saver.

Upper Wisconsin has a staunch friend in Dr. Cyril G. Hopkins, the eminent soil specialist. Of its opportunities he has written: "For the remaining virgin lands of Wisconsin and other northern states I think we should all rejoice and be exceedingly glad, because when the booms of the irrigation congress and dry farming congress reach an equilibrium which will mean in many cases only after an explosion resulting in loss and privation to many individuals, then the only substantial outlet will be such lands as you are familiar with in Wisconsin."

The best way to spend a reasonable amount of the road tax is in hiring grades dragged when storms make dragging necessary. It is surprising how much good a few draggings will do to an earth grade, the surface is smoothed and when rain falls it soon gets into the ditches and away. The grade that is never dragged is filled with rut holes out of the main track, and these catch and hold the water away from the ditch.

$200

Takes possession of a fertile quarter section in

Southwest Kansas

There's not much vacant land left in Kansas. The five southwestern counties have remained unsettled and undeveloped because of inadequate transportation. The Santa Fe is building new lines to serve this territory, and thousands of farms next season will be put to creating wealth. This is your opportunity to get a good Kansas farm cheap. The terms are advantageous, the results certain.

If you had taken a Kansas farm ten years ago and developed it with intelligence and vigor, you, too, would now be lending money to Wall Street, as other Kansas farmers are doing. You, too, would have a piano in your parlor and an automobile in your barn.

The next best thing is not to lose this opportunity of securing a quarter section of this splendid wheat land.

Besides wheat, oats and barley, you can get good profits out of speltz, milo-maize and kaffir-corn fed to your own stock. Hogs thrive on milo and kaffir, and disease is unknown. Western Kansas farmers find peanuts a splendid hog feed, easily grown and easily fed. Broom corn brings fancy prices, and potatoes, garden truck, fruit and alfalfa will all do well for you.

There are some flowing artesian wells in this territory, and everywhere that wells have been put down water comes to within thirty to sixty feet of the surface. Irrigation by pumping will doubtless be commonly practiced, and the tremendously increased yields will pay big dividends on the small investment required for gasoline or oil driven pumps.

The climate is pleasant and healthful. Your boys and girls will find good schools. Churches, social clubs and farmers' institutes are being organized. Rural telephones and free delivery are coming in. In every way development is rapid, and only a few years will give you every advantage that older communities have.

You can secure a quarter section (160 acres) for only $200 down. The price is $10 to $15 an acre. The terms are astonishingly liberal. Only one-eighth down and one-eighth each year after the second year, with interest at only 6 per cent. You see you have two full seasons before a second payment on the principal is required.

For further information write for illustrated descriptive folder containing map and full details.

Topeka, Kansas

The Clothcraft Guarantee is as Good as Money

WHEN you buy a Clothcraft suit you *know* you are getting all-wool cloth that is properly shrunk and fast in colors—that the trimmings and workmanship are first-class and that the suit will give satisfactory wear.

Clothcraft goes further than fit, and gives you the qualities on which fit largely depends. These qualities are guaranteed by both maker and dealer and this is the guarantee you will find in the coat pocket:

Clothcraft clothes in many fabrics and styles at $10 to $25 are made for men of taste and judgment.

Clothcraft Blue Serge Special No. 5130 at $15.00 is a suit you should have for spring. You can find it at the Clothcraft store. Look for the Clothcraft label on the coat and the guarantee in the pocket.

If you cannot locate a dealer, write us and we will send you a card of introduction to the nearest Clothcraft store, a style book for spring and a sample of 5130 serge.

CLOTHCRAFT CLOTHES
Guaranteed All Wool At $10 to $25

MARK W. WOODS.

NO LESS an authority than the venerable ex-president of the University of Michigan, Dr. James B. Angell, declared: "The more of a man one is, the more successful will he be in any worthy enterprise." The career of Mr. Mark W. Woods, of Lincoln, Neb., is a splendid illustration of the aptness of this statement. Mr. Woods has made good in enterprises covering such a range of endeavor that his career stands as an object lesson and an inspiration to others.

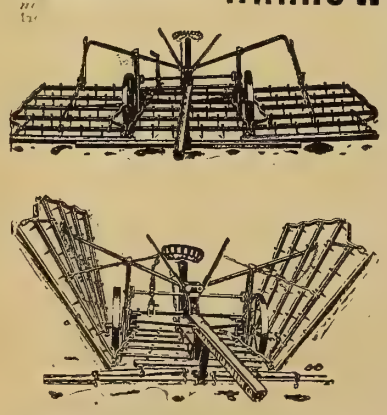
A son of the well-known live stock auctioneer, Col. F. M. Woods, than whom no man connected with agriculture in the grain belt excels in natural talent or in the affection of the people, Mark W. Woods has proven a worthy son of a worthy sire. In the face, at times, of apparently insurmountable obstacles, he has achieved to an enviable position of success, by hewing close to the line of absolute integrity, by a perseverance which has never wavered and by an industry which amply justifies its high reward.

One of Mr. Woods' first undertakings was to introduce and popularize the independent telephone line in his home state, and so well did he work that notwithstanding the most intense opposition from the already established telephone interests he has had the satisfaction of seeing the independent systems flourish until today there are 63,000 independent telephones in the southern half of Nebraska alone. Not content with this work, he took up the development of a tract of 62,000 acres of Montana land, partially under irrigation and partially devoted to dry farming. The venture called for the display of all of his remarkable and varied talents and was eminently successful. It removed the last lingering fear from the mind of many a "doubting Thomas" as to the productiveness of the land and opened the eyes even of the Montana farmers themselves to the immense possibilities of their soil. Still more recently Mr. Woods has undertaken the operation of a 5,400-acre farm in Nebraska. Twenty silos will be erected on this farm in the near future and a large feeding plant will be established. Mr. Woods proposes to demonstrate the possibility and feasibility of growing beef on high-priced land, incidentally convincing stockmen generally of the value of the silo and its permanent place in grain-belt agriculture.

In his work in connection with the Woods Brothers Silo and Manufacturing Company, Mr. Woods is demonstrating that close application to the same business methods which worked out successfully in the establishment of the independent telephone lines and development of the large western land tract is destined to bring the same reward of unqualified success. While the past few years have seen the magnitude of the business of this company advancing by leaps and bounds, we are free to predict that the next few years will see Mr. Woods' "hinge door" silo the vehicle for carrying to every state the name and fame of a man whose marked success in worthy enterprises is but commensurate with the greatness of the man himself.

Clipping horses too soon is like taking off your winter underclothes too soon, except that you cannot put the clipped hair back on the horses, while you can sneak back to the wardrobe and get your winter underclothes again when spring weather turns back to winter. Clipping the long winter coat off the horse is beneficial to the horse all right, only don't get in too much of a hurry to do it, remembering that one robin seen on the back fence doesn't mean spring has come to stay.

HOWELL RIDING HARROW



THE upper picture shows Harrow at work. The lower shows it on the road with all sections raised and side sections folded **to go through any wagon gate.** Trot to the field and back. Safe in the hands of a boy, as the driver's seat is well to the rear.

Is of steel and malleable iron throughout, no bolts or taps to lose. Close hitch makes easy and steady pull. No jerking. Teeth can be set to any pitch. Makes a fine drag or stalk breaker. Coiled spring shock absorbers—fine for stump ground.

Best of all—the driver can lift any one of the three sections while moving, easily and quickly. More work, easier work, and better work. Ideal dry weather harrow, as it pulverizes dirt into a fine emulsion to retain moisture.

Factory to Farmer
No Middleman

This harrow is made by farmers. We know how to talk to farmers, and, talk in our low, direct prices.

A Corn Grader—A Grain and Grass Seed Cleaner

Two Machines in One.

It's exactly what you get in the Newton grader and cleaner. It grades corn in a most satisfactory way. Cleans and grades all kinds of grass and field seeds. Hundreds in use on the farms of successful farmers.

The Newton

Separates Oats from Wheat.

No other grader on the market will give you better work than the Newton. Few will come anyways near doing the work it will do.

Ungraded Seed Doubly Unprofitable.

The danger in sowing weak, shriveled grains does not lie alone in the fact that they do not grow, but by leaving vacant space you allow weeds to get a start which injure neighboring stalks. With the Newton grader you take out the light and chaffy grain, leaving only the plump, well-matured grain for seed. Grading your grain this year should save the price of our grader on the larger yield of the season's crop, and the grader will last many years. Don't take our word for it. Ask the college experts and they will tell you we are right.

Get the Newton Catalog Write us today and get circular telling all about this simple, practical, big-capacity corn grader and grain grader and cleaner—two machines in one. It tells all about its many points of advantage over other machines.

BERGMAN MFG. CO., - NEWTON, IOWA.

Studebaker

How Studebaker Automobiles Are Made

A Heart-to-Heart Story. No. 3

In this series of articles concerning the manufacture of Studebaker automobiles we have already described the four main opening channels of the Studebaker factories—the forge shop, foundry, steel stamping mill and heat-treating ovens—and also some of the many intricate milling and grinding operations which must all be wisely planned and well done before even the single parts of a Studebaker car are ready for assembling.

This issue describes farther steps in manufacturing which carry the car towards completion.

From the time some mighty forge hammers a molten block of steel into the form of a finished part, that part starts on a

A motor assembling department. The stock is drawn from bins at either side.

long journey through the Studebaker factories. It is milled, ground, heated white hot, baked, tempered and ground again in the course of its journey, but ever the process brings it one stage nearer its final adjustment in the finished car. The process is ceaseless. That stream which we call *production* always goes on.

Because Studebaker manufacture is organized in this way we are able to get better workmen at every point in the process. And this is how we do it.

The men who grind Studebaker gears, for example, are master mechanics of a single job. They grind gears, and nothing else. It is skilled labor brought to a high degree of specialization—incidentally, too, very well paid. As Sheffield workmen are famous for cutlery and South Bend watchmakers for watches—so Detroit workmen are famous for skill in building automobiles. And in no plant is there more attention paid to high standards and the most efficient labor than in the Studebaker factories.

The Studebaker factories have been making automobiles for years and our financial and factory resources are large—naturally this draws to us the best workmen because we can offer them regular employment. We keep our men and as we keep them they gain in specialized expertness. This is one of the important reasons why a concern like The Studebaker Corporation is able to produce the very highest quality of goods.

From each of the departments, as parts are completed they are sent to the big stock rooms where they are laid away until assigned to the assembly departments; but before they are accepted by the stock department they are put through a final test, which is in addition to the many tests they have had during the process of their manufacture.

We want you to appreciate this kind of organization. We maintain a separate department known as the efficiency department. This group of engineers study the methods and organization of Studebaker plants and constantly seek to improve them. All the machines, benches and shops are charted. The journey of every part is charted on big paper charts which show exactly how it passes through the factory. The efficiency engineers study how this journey can be shortened; how handling can be reduced; how by manufacturing universal joints, for example, in one shop instead of another a little less time will be consumed in the process; how the change of a bench here, the addition of an electric light there, will enable time and money to be saved. And all this means a better car for less money.

The department where the parts are brought together in a car is called an assembling department. There are six great assembling departments in the Studebaker factories; the small parts assembly; the motor assembly; the rear axle assembly; the steering gear assembly; the control assembly and the chassis or final assembly.

In the small parts assembly small units of two or three parts are put together. For instance, the clutch, the universal joints and other similar small units are assembled and made ready to join with the larger assemblies in the chassis.

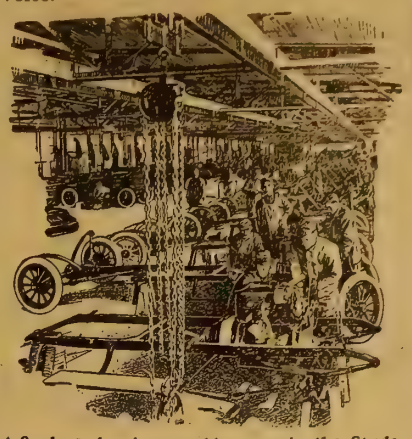
The motor assembly is one of the most important assembling departments in the

Enameling room where the finish is baked on Studebaker fenders and hoods. The enamel is baked for hours at a time.

factories. Here the cylinders, the crank shaft, the cam shaft and other parts are brought together and built into a motor. Expert workmanship is absolutely necessary. If the motor is to run true there must not be the slightest looseness or any distortion or unevenness of balance. In fact, each pair of pistons and connecting rods are balanced to within a fraction of an ounce so that the crank shaft will revolve perfectly smoothly.

Did you ever think how rapidly the parts of a motor must move and how, in a good motor, every part must be fitted true to the last degree of accuracy? It is because of the fine workmanship that Studebaker motors run so silently, you can seldom hear them, and so efficiently that Studebaker motors deliver, through the transmission to the rear wheels, a larger proportion of the power developed by the exploding gas than any other motor yet designed.

When the motor is assembled it is clamped to a solid frame and belted to an electric motor which drives it for several hours under heavy lubrication in order to "work in" all the bearings. Later the same motor is taken to the motor test room and run for many hours under its own power. If a "knock" or any imperfection should develop, it is corrected then and there. In this motor room 75 motors are constantly running under their own power, yet it is so quiet that no one needs to speak above an ordinary tone of voice.



A final or chassis assembly room in the Studebaker factories. Notice the traveling crane in the foreground.

Before a Studebaker motor is finally approved it is tested for horsepower by a dynomometer. If it shows up perfect in every respect it is passed to the chassis assembly to be placed in its chassis.

If you will reflect a little here, you will see how perfect must be our system of manufacture in order that the different parts of a car may be drawn from stock and yet always each exactly fit the other. If we did not manufacture to the finest limits the cost of assembling would be prohibitive. This is how an owner in Bombay, India, or in Mobile, Alabama, or anywhere in the world may send to us for any part needed on any car we ever built and get a part which may be slipped into the car and fit exactly. This is what we call real interchangeability of parts.

Another important assembly department is where the rear axle and transmission are built up, in much the same way as the motor. When the rear axle and transmission are ready they are belted to an electric motor. It will be remembered that these gears have already been tested for accuracy and silence. They are now tested in permanent relation to each other and must be perfect before they are passed. It is such care as this which is producing Studebaker rear axles on the new cars which are noiseless at all speeds.

When the rear axle passes its final test it is sent to the chassis or final assembly.

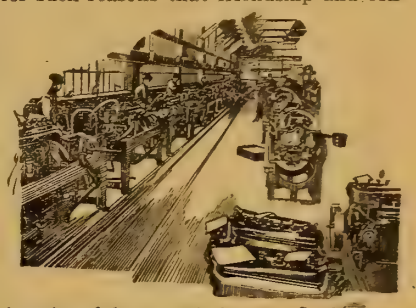
These rooms are huge and in them 150 cars are built at one time. Labor is reduced to a minimum. Electrically-driven traveling cranes run the length of the room and the chasses pass down the line of workmen, each doing his part as the cars pass by. One skilled workman places the steering gear or the control mechanism in the chassis; two others working together place the springs on the frame; two more put in the axles; others bolt in the motor, and so on until the chassis is completed.

If you have read between the lines of this story you have already seen how quantity production not only lowers prices but also does better work. The effect of specialized skilled labor is everywhere apparent in the finished Studebaker car.

When the chassis is finally finished, it is ready for the road test. The final adjustment of the carburetor must be made and the little finishing touches which tune up the car to prepare it for the owner's hands.

We have 35 testers, young men and automobile experts, who put a rough body on the chassis and take it out for a long, hard drive on the country roads. It is run at slow, medium and highest speeds over hills and through sand. Of course on the road test old wheels and tires are used. The skilled eye of the driver watches every part of the car and his ear detects instantly any variation or defect in the car's running capabilities. Any necessary minor adjustments are made on the road and when the tester returns he turns in to an inspector a complete report on the car. If changes are necessary they are made and when the inspector finally passes it the car is sent to the painting department, where it is cleaned by steam to take off every particle of oil, sand and dirt.

We have gone over these matters in detail because in the aggregate they account for the remarkable value of Studebaker cars. We want you to believe in Studebaker cars because you know that they are manufactured by most efficient, honest and up-to-date methods. It is for such reasons that friendship and con-



A section of the motor test room. In this room 75 motors are tested under their own power at one time, yet it is so quiet that the workmen speak in ordinary tones.

fidence grow strong, and we hope you will come to have real friendship for and confidence in Studebaker cars and Studebaker business principles.

The fourth of this series—and next to the last—will appear in the March 20th issue. It will be worth reading. Remember to look for it.

Many other important matters of Studebaker automobile manufacture we have described in our "Proof Book." It explains things about an automobile which few people know but which every buyer ought to know. It is free. Send for it now on the coupon below.

FARM FURROWS

TURNED BY A PRACTICAL FARMER

After an unusually dry winter our blanket of snow is not at all unwelcome, but it looks as though Old Sol is going to make short work of it.

The increased yield on one acre will pay the expense of sharpening the disk. If the sharpening cannot be done at home it pays well to give the blacksmith a job. Live and let live is not a joke.

After the quail is almost extinct it looks as though our lawmakers are going to try to protect them. This may help some and if every farmer would forbid hunting on his farm it might be that the call of "Bob White" will be heard again.

Last year we cut our oats hay with the self binder and liked it well enough to make this year a repeater. It was cured better than the oats in the swath and was easier to handle, especially since some of it had to be stacked. I would advise making small bundles and small shocks and to see that the shocking is well done.

A feed mill that crushes ear corn and grinds other grain is a pretty good machine to have for the farmer who wishes to get the very highest price for his grain, but it is a mistake to try to do much grinding with anything less than a four-horsepower engine. It goes without saying that one who wishes to get the highest price for his grain must sell it in the form of beef, pork or dairy products.

The auction season is on again with its usual hurly-burly of bills, noise, free lunch at noon and "other articles too numerous to mention." It is noticed, however, that "twenty tons of hay in the stack" does not draw the crowd that it did a year ago.

Many first-class nurseries are now selling direct to the planter, which is a move in the right direction, because it allows the one who wishes to plant to use his own judgment in making a selection. The old-time nursery agent has seen his best days and has received many well-deserved kicks, but there are many groves and orchards on our prairie farms that show that this was not all to the bad.

If the early plowing is left a little rough it doesn't worry me, for rains are most sure to smooth it and pack it before the time of planting, but if I am plowing a short time before planting, I want the harrow to follow the plow, unless a rain is in sight. In a real arid country I would likely change this plan a little, and would be particular about keeping a dust mulch.

An incubator can be regulated so a cold snap has no effect on the hatching of the eggs, but I find it doesn't do to get in such a hurry to "start the thing going" that the eggs must be gathered during freezing temperature. It is difficult to get eggs that will hatch in cold weather, even by gathering three or four times a day.

As a rule the cheap thing proves the most costly in the end. On the other hand, a high price paid for a cheap thing adds nothing to its durability. A cheap belt is a poor investment at any price, no matter how low, for it is sure to give out and cause delay just when everyone wishes to rush the work along and finish.

Time now to get busy with the fanning mill. Putting it off until seeding time may mean putting it off altogether.

A spring in the price of live stock proves a great boon to those making public sales. Last fall shoats were selling comparatively reasonable at sales, but since prices have advanced, bidders have put the selling price of shoats away up in the skies. Fat hogs will have to sell higher than they do now if some of the sale-bought shoats realize their purchasers a profit, for some have been selling three cents a pound higher than fat hog prices, and they have been 150-pound shoats at that.

Unless March gives us a great excess of moisture, soil will work fine this spring. I never have known it to come this far through the winter in such fine shape. A lack of heavy rains, and plenty of freezing with the surface bare, has mellowed it beautifully. Let us hope for no prolonged floods.

Coal oil is higher in price than it was but it is still cheaper and much more comfortable for summer cooking than wood or coal. The modern oil stove is certainly a great improvement over the old way of roasting over a cook stove, all through the summer season. The cook is as entitled to these improvements as is the man to his improved machinery.

It costs but little to have the harrow teeth sharpened, and the difference in work done by a harrow with sharp teeth and one with dull teeth is certainly great. It is a good idea to look after these things and get them put in shape before the spring's work comes on with a rush.

Horses that have been wintered with little to do are soft when put into work in the spring, and they should be handled with care for several days. A horse can be injured quickly when soft, so it pays to use a level head when doing the first few days' work.

The disk harrow that more than takes two corn rows or that will not quite take two is a nuisance. The fourteen-disk size is about right for the average width of corn row, while the twelve size is too narrow and the sixteen size is too large.

Hindsight is a mighty sight better than foresight. Many a time I have got an oat field half sowed when stopped by storm. Almost always made the better yield, but a man never knows which it will be at the time of sowing.

If you have a good-sized garden, plant in rows that can be worked with a horse cultivator, if you have only a small garden, get the rows close together so there will be less ground to hoe.

Calves are now worth enough so they will pay for all the good feed they need. Any kind of live stock is worth so much that it is worth keeping well.

The nearer the approach of pasture the more a cow's appetite must be tempted with the best roughness the farm affords. I like to have a stack of good clover or alfalfa hay left to feed during the time when the smell of grass is in the air and before it arrives in entirety.

A weedy field is best plowed early or else late, just before planting. By plowing early, the weed seed has time to sprout and can be killed by disking before planting; by plowing just before planting, the corn is given at least an even start with the weeds.

No-Rim-Cut Tires
10% Oversize

One Million Sold Another Million in a Single Year

One year ago—in our 13th year—we announced that one million Goodyear tires had then gone into use.

This month we touch the two million mark, and it's only one year later.

It took 12 years to bring motor car owners to use a million of these tires.

It took only one year for those million tires to sell a million others.

Mark What Those Tires Told

A million tires, within 12 months, sold a million others. That breaks all the records of Tiredom.

Don't you think you should know how they did it?

This is How

Men found that rim-cutting, with old-type tires, ruined 23 per cent of their tires.

They found that Goodyear No-Rim-Cut tires ended this loss entirely.

Men also found that the 10 per cent oversize added 25 per cent to the average tire mileage.

Hundreds of thousands of men learned this, then told the facts to others.

The resulting demand now compels an output of 6,000 tires daily.

Are They Wrong?

You who still use other tires must infer that these men are wrong.

But these are days of odometers. Men are keeping track of tire mileage.

Mileage figures only sold those million tires—the mileage figures on the previous million tires.

And Goodyear sales, because of those figures, are seven times larger than two years ago.

Find Them Out

For your own sake, test No-Rim-Cut tires. They save the average user almost half one's tire bills.

Think how that cuts tire bills. Think how it saves annoyance.

These tires now outsell every other tire in the world. Find out why they do it.

Write for the Goodyear Tire Book—14th-year edition. It tells all known ways to economize on tires.

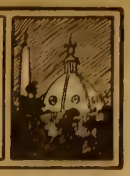
CURRENT EVENTS



FOR the first time in sixteen years the country is now under a democratic administration. Woodrow Wilson was inaugurated president and Thomas Marshall vice-president on Tuesday of this week. They bring with them into power a congress controlled by a good working majority in the lower house and by a bare majority in the upper house. Unless the democratic ranks are divided, as the republican have been for some years, the party should see much legislation enacted in fulfilment of campaign pledges. President Wilson comes into power with the largest electoral college vote of any president, and yet the fact remains that he is a minority president to the extent of taking office by the votes of less than half the people. He is cultured, experienced in dealing with men and brings to the office probably the highest degree of intellectual vigor which it has ever experienced. Up to the time of writing none of the members of President Wilson's cabinet had been officially named, although it is unofficially stated that the following have been agreed upon: Secretary of state, William J. Bryan, of Nebraska; secretary of the treasury, William G. McAdoo, of New York; postmaster-general, Albert S. Burleson, of Texas; secretary of the navy, Josephus Daniels, of North Carolina. The week will be a busy and important one, because of the change in national administrations, and the selection of new men for the important positions of presidential advisers and the first steps to put the democratic legislative program into execution.

CONGRESS will be called in special session by President Wilson, Tuesday, April 1st, to take up three important matters: Revision of the tariff downward, an income tax bill and probable currency reform. President Wilson announced his plans a few days prior to his inauguration, after receiving a letter from Congressman Underwood, democratic leader of the lower house, who informed him that by the first of April drafts could be made for most of the tariff bills so that congress could immediately proceed to their consideration. It is confidently expected that the proposed tariff legislation will have passed the house before the first of May. The democrats have complete control of the senate so that President Wilson is confident of the tariff bills becoming laws before his administration is many months old. An income tax bill is being prepared, following the action of the necessary number of states in ratifying the proposed constitutional amendment. Whether the minimum income will be placed at $5.000 or less has not yet been disclosed. President Wilson is known to favor currency reform and has spent much time recently studying the subject.

PRESIDENT FRANCISCO I. MADERO and Vice-president Jose Saurez, of Mexico, were killed while being transferred from the national palace to the penitentiary, in Mexico City. Although General Huerta, provisional president, had assured the public that the lives of the two men would be safeguarded and although President Taft had served official notice that this country would demand the protection of the former rulers, the two men were done to death in a manner which casts suspicion upon the present administration in Mexico. Claim is put forth that an attempt was made to rescue Madero and Saurez and that in the melee the two men were killed, whether by their friends or their guards has not been disclosed. An official investigation has been ordered and in the meantime Ambassador Wilson has notified President Taft that he believes President Huerta's version of the affair and that the men were accidentally killed. President Huerta will remain in control in Mexico until a new president and vice-president are chosen by the people at an election, the principal candidates being Felix Diaz, who led the recent revolt against President Madero; Francisco de la Barra, former provisional president, and Rodolfo Reyes. In the meantime American troops to the number of 10,000 have been mobilized on the Texas frontier, in a position to be moved immediately into Mexico should American life be sacrificed. What action President Wilson will take on probable intervention has not been disclosed, but the troops will be in readiness along the Texas line for any serious movement.

DIRECT election of United States senators, under a constitutional amendment, is an imminent probability. Twenty-four of the states have already ratified the amendment, which will become a law when ratified by two-thirds of the entire number or thirty-six. One house of twelve additional state legislatures has already ratified the amendment, so that if the other house of each of these twelve states takes similar action the amendment will have passed in thirty-five states, or within one of the required number. The legislatures of forty-two states are in session this winter, so that it is considered highly probable that before the spring adjournment enough will have taken action to make it possible to put the direct election amendment upon the constitution. It is considered probable that the successors to thirty-two senators whose terms of service expire March 3, 1915, will be chosen by the people at a direct election rather than by the old system with its corruption and deadlocks of legislatures. In the meantime several states are adopting the Oregon plan, which provides that candidates for the legislature shall announce in advance whom they will support for the senatorship, thus giving the people an indirect opportunity to say who shall be the state's members in the upper house of congress. Iowa is one of the states which are proposing to adopt the Oregon plan, the lower house having already passed the bill, with good prospects of the upper house doing likewise.

NOTWITHSTANDING much discussion of economy, congress has seen fit to pass one of the biggest "pork barrel" bills in many years, appropriating over $25,000,000 for some 400 public buildings scattered throughout the districts of the various men who voted for it. That there is urgent need of many of the buildings provided for by the bill is not to be denied, but on the other hand (as Representative Fitzgerald, of New York, pointed out) postoffices and other public buildings are provided for for twenty-four towns of less than 3,000 population and with postal receipts of less than $7,500, although a few years ago a minimum limit of $10,000 for postal receipts was agreed upon before a new public building could be had. Only twenty minutes were allowed for the opponents to discuss the bill, which provides $100,000 for a public building in Jasper, Alabama, a town of 2,500 population; $125,000 for Las Cruces, New Mexico, with less than 4,000 population; $62,500 for Buffalo, Wyoming, with only 1,300 population and $75,000 for Bellefourche, South Dakota, with a population of only 1,300. For many years past the "pork barrel" bill has been simply a scheme for various congressmen to secure large sums of money to be expended in their districts for but little other purpose than to insure their reelection. The congress which passed this particular bill had made much to-do about economy, cutting down the naval appropriation bill and a $20,000 appropriation for a national counsel of defense, but wasted many millions of dollars upon the public building bill.

Don't Break Your Back
Let Electricity Start the Engine

WHY make yourself hump every time you start your engine—why put up with all the fussing, delay and uncertainty of cranking when you can get the Electric Starting Woodpecker, that starts by electricity from the touch of a button, yet costs no more than ordinary engines.

Its electric starting feature alone adds many dollars extra value—but, listen to this—Self-priming gasoline mixer, insuring easy cold weather starting—Self-contained power plant—nothing to get out of order. Speed regulator — can change speed while running. Hopper cooler which can never let cylinder run too hot or too cold, *is positively frost-proof and can't freeze* —special feature protects it. Mounted on steel girder sub-base. Can be set on ground, floor or wagon — no foundation necessary.

30 Days' FREE TRIAL

Just a simple request from you and you can get an Electric Starting Woodpecker to use 30 days on free trial. We let the engine sell itself. Don't miss this big liberal offer. Write for proposition.

No other farm engine ever contained so many *strong features —every one a quality point.*

Electric Starting
WOODPECKER

You will be slighting your own interests if you close a deal for any engine before getting the full facts about the Woodpecker. It sets a new standard in farm engine construction —the very latest design—the strongest power for size—develops a big surplus over rated horsepower—requires the least attention to operate and the most handsome in appearance. You simply *must* get the facts *at once.* Write us *quick.*

This Book Tells All

Write for it today. You need this book no matter what power you are now using or ever will use. It contains information about all kinds of farm power, presented from an impartial standpoint. Don't delay—mail a postal or letter NOW. Address

Mounted On Steel Girder Sub-base —No Foundation To Build

BOHON'S "BLUE GRASS" BUGGIES
"DIRECT from the Factory to YOU."

THAT'S how I can sell such high-grade buggies at such low prices. I simply cut out all the middlemen's profit, salesmen's salaries and expenses and give you the benefit of all this saving. The result is you cannot buy a better buggy for the same money, nor as good a buggy for any less anywhere in the world. I can furnish you exactly the buggy YOU want, giving you your choice as to color, finish, upholstery, etc. You take absolutely no chances in placing your order with me because you are fully protected by

My $30,000 Guarantee

Under this guarantee I will ship you any buggy or harness in my catalog and let you use it right on the road for 30 days and submit it to any reasonable test in actual use. If it is not exactly as my catalog states I will refund every cent of your money and pay the freight both ways besides. And there won't be any argument about it either. Behind my guarantee is a $30,000 bond deposited by me in the Mercer National Bank of this city. That ought to convince the most skeptical.

Let me send you my big

BOOK of Buggy Bargains FREE

This shows you not only the latest styles in buggies but also how they are made and how carefully each one is inspected and tested before it is shipped. It shows tests of strength for individual parts which no cheap buggy could stand. You will find all this explained in my book together with a lot of other interesting and valuable information.

Send for it Today

I want you to have it whether you buy a buggy this year or not. I will be glad to send it and pay the postage on it. You need not write a letter, just use a postal card, but send it TODAY.

D. T. Bohon, 221 Main St., Harrodsburg, Ky.

ECONOMICAL-DEPENDABLE-SIMPLE
THE ENGINE FOR YOUR FARM

Badgers require less fuel to run under heavy load than the average engine consumes under lightest load. Dependable at all times; rain or shine, cold or hot, under heavy load or light load. Runs so smoothly requires no blocking. Extra large bearings mean long life. Perfect Oiling System. Easy to start.

Each Engine backed by a FIVE year guarantee.

Made in Stationary, Portable and Semi-Portable types—2½ H. P. to 30 H. P. Also Portable Saw Outfits, 6 to 12 H.P. Send for FREE CATALOG. Give your dealer's name and we'll send you also the first lesson of our free course in engineering. Teaches you all about construction, care and operation of gasoline engines.

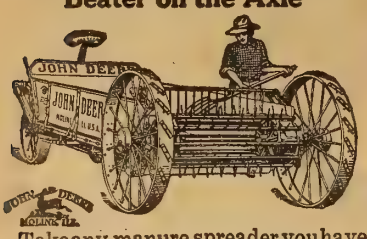
John Deere Spreader

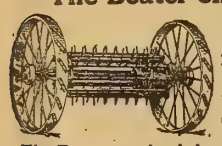
The Spreader with the Beater on the Axle



Take any manure spreader you have ever seen, remove all the clutches and chains, all the countershafts and stub axles, do away with all adjustments and mount the beater on the rear axle.

Rebuild the spreader so that the top of the box is only as high as your hips. Make it stronger. Remove some two hundred trouble-giving parts and throw them away. You will have some sort of an idea of what the John Deere Spreader, the Spreader with the Beater on the Axle, is like.

The Beater on the Axle



The Beater on the Axle

The beater and all its driving parts are mounted on the rear axle. This construction is patented. You cannot get it on any other spreader made.

Power to drive the beater is taken from the rear axle through a planetary transmission (like that on automobiles). It is positive, runs in oil, and does not get out of order.

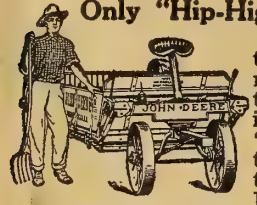
Few Working Parts

The John Deere Spreader is so simple that there are no adjustments. It has some two hundred less parts than the simplest spreader heretofore made.

Out of Gear

There are no clutches to throw it into gear. The lever at the driver's right is moved back until the finger, or dog, engages a large stop at the rear of the machine. All the chains and adjustments have been done away with.

Only "Hip-High"



Easy to Load

Because the beater is mounted on the rear axle, it is only "hip-high" to the top of the box. Each forkful of manure is put just where it is needed. You can always see into the spreader.

Roller bearings, few working parts, the center of the load comparatively near the horses, and the weight distributed over four wheels, make the John Deere Spreader light draft.

Spreader Book Free—*Tells about manure, when and how to use it, how to store it, and a description of the John Deere Spreader. Ask for this book as Package No. Y.27*

John Deere Plow Co.
Moline, Illinois

Hamstring the Snout of your HOGS with a

BELL-HART Anti Rooter

A boy can ham-string the snout of a hog in a moment with a BELL-HART tool.

STOP THE ROOTING.

Once done, always done. Mr. Hog hasn't the power to lift the sod. Does not disfigure the finest show stock. Most humane of all known methods. Be the first to use the BELL-HART tool in your neighborhood.

Ask your dealer—if he does not carry it send us his name and $2.50 and we'll send you tool prepaid.

Write for Booklet which tells the interesting story about the discovery and advantages of the Bell-Hart Tool.

BELL-HART TOOL CO., Manufacturers, Department 5. Palmyra, Illinois.

OUR LEGAL DEPARTMENT

THIS department is edited by a practicing lawyer who has had years of experience at the bar. He will give accurate and reliable answers to all legal questions when they are of sufficient importance to be of practical interest to any considerable number of our readers. Subscribers who desire questions answered in this department should base them upon a brief, plain, concise statement of the actual facts. To insure immediate attention inquiries should be addressed to "The Legal Department," in care of this paper; but as the inquiries sent are at times very numerous, thus delaying printed answers, those to whom it is important to receive an immediate reply by mail should remit $1.00, addressed as above.

LAW QUESTIONS CONSIDERED

INSPECTION OF ANIMALS.

Mr. H. A. Parker, Auburn, Iowa.—I intend to move to Cottonwood county, Minnesota, next spring, and will take with me four horses and two mules. Is it necessary to have them examined by a veterinary before shipping?

Answer.—You will have to have the animals inspected by the state veterinarian of Iowa, or one of his assistants and get a certificate that they are free from contagious and infectious diseases. This certificate must be made in duplicate, and the original forwarded to the live stock sanitary board of Minnesota, and the duplicate given to the railroad or transportation company to be attached to the bill of lading.

PARTITION FENCE.

An Iowa Subscriber.—About six years ago I fenced my pasture with woven wire fence. I furnished all the woven wire for eighty rods of fence between the pasture and my neighbor's land, fastening the wire to his posts on his part of the division line, and have kept it up ever since. He sold his land to B and B sold it to C. I now wish to take the wire off his part of the line and put it on my own, but he objects to it. Has he a right to continue to use the forty rods of wire on his part of the line, or can I take it off?

Answer.—This is a matter within the jurisdiction of the fence viewers. You have no right to take off the wire until the matter is determined by them. Request them to meet and decide the question. They should in such case find the reasonable value of the forty rods of wire, and order your neighbor C to pay you for the same, or else make an order allowing you to remove the wire.

LICENSE FOR AUTOMOBILE.

Mr. James Smith, Jefferson, Iowa.—Can a man lawfully keep an automobile in a shed on his farm and not use it on the roads without paying license?

Answer.—He can. Registration and license are required only for owners of motor vehicles which are operated or driven upon the public roads of the state.

CHURCH CONSTITUTION—ELECTION.

No. 77, Baxter, Iowa.—A certain article in a church constitution is as follows: "Elders and deacons shall be elected by a majority of the votes cast at a congregational meeting, and may be reelected. Nominations for the offices of elder and deacon shall be made by the consistory, which shall present the names of one or two persons for each officer to be elected. A person shall not be voted for unless regularly nominated." In some congregations the consistory nominates two persons for each office and declares the members whose terms expire may be reelected. This would make practically three nominations for each office. In other congregations the consistory nominates two persons, one of which may be the person whose term expires. Which is correct according to said article in the constitution?

Answer.—The last method is correct. Nevertheless if the first method be pursued, and a person voted for receives a majority vote the irregularity would not be sufficiently material to render such election void.

HOMESTEAD—SOLDIERS AND SAILORS.

Mr. Arthur Ewald, Northwood, Iowa.—What must an honorably discharged soldier or sailor do to secure a homestead, and what privileges, if any, are extended to him by the new homestead law?

Answer.—In order to secure a homestead on the public lands an honorably discharged soldier or sailor must select the land he desires and make application for the same at the land office within the district where the land is located, paying the land office fees. The register will furnish the necessary blanks for his application. Under the new law the claimant is only required to reside on and cultivate his land for three years before proving up and getting his final receipt. He must construct a habitable house on the claim and reside there, and cultivate at least one-sixteenth of the claim beginning with the second year, and at least one-eight of it beginning with the third year. The special privilege given to an honorably discharged soldier or sailor is that the time he served in the army or navy is deducted from the three years of residence and cultivation, except that he must reside on it and cultivate it for at least one year.

BOUNDARY LINE—PARTITION FENCE.

A Subscriber, Bushnell, Ill.—I live in a town in Illinois and the lot adjoining mine is occupied by a big flat, in which five or six families live, and they trespass upon my ground and keep the grass tramped so that it will not grow. There has never been a fence between the lots and I am not certain as to where the exact line between the lots is. (1) Can I compel the owner of the flat to have a survey made and the line established? (2) Can I compel the owner of the flat to build half of a partition fence between the lots, and if so, how must I proceed to do so?

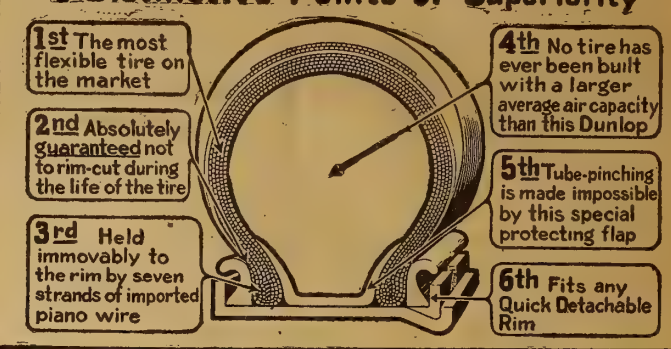
Answer.—(1) The law gives author-

The Genuine

DUNLOP

Straight Side Tire is an Ideal Tire for Country Use

6 Distinctive Points of Superiority



Everywhere men who use their cars in cross country service are turning to the Genuine Dunlop straight side tires.

Here they have found a tire that is fortified at every possible point to withstand the extra rough service over country roads.

Country drivers want maximum flexibility in their tires—they want protection against rim-cuts and tube pinching—they want security of fastening and extra size.

The Genuine Dunlop Tire combines all of those advantages and in addition has the extra strength and durability that comes from the co-operative four-factory methods of manufacture used *exclusively* in the making of *all* United States Tires.

The Dunlop is in no sense a new tire.

It was placed on the market over ten years ago, and has been steadily gaining in popularity since then.

But remember—the Genuine Dunlop, the only tire that combines all the advantages of this type—is made exclusively by the

UNITED STATES TIRE COMPANY

Makers of the Famous Nobby and Chain Tread Tires
(Made in 3 Styles including the Dunlop)

The Only Spreader with Two Beaters and with a Distributing Attachment. Pulverizes and Spreads Wider.

Man, it's a wonder! Covers three full rows—5 to 7 feet. Cuts the manure into shreds and distributes it evenly. No choking. No bunching. Guaranteed to do this with all kinds and conditions of yard and stable manure; also lime, ashes, compost and commercial fertilizers. See the spreading paddles in the picture!

New Idea Manure Spreader

The Spreader That Won the Hartman Contest

Far ahead of any other on the market. Simple construction. Light—but stands hard usage. No cog or bevel gears. Easy loading. Easy haul for double team—not a horse killer. Tracks with standard wagon. Solid bottom which never warps, breaks or wears out. Only perfect endless conveyor—cannot slip. All power direct from rear axle. Only two levers to operate. Strong metal wheels.

50 more strong points. All explained in New Catalog. WRITE FOR IT TODAY, whether you need a spreader now or not. SEND A POST CARD.

ity to the city council to regulate partition fences and party walls. You should apply to the council to determine the line. We do not think you can compel the owner of the flat to have a survey made. (2) The fence law of Illinois is applicable to agricultural lands, and not to city or town lots. If the owner of the flat does not want a partition fence there is no way by which you can compel him to build half the fence between the lots.

FARM CROSSINGS—CATTLE GUARDS.

A Subscriber, Ord, Neb.—I bought land in Nebraska five years ago. The C., B. & Q. railroad runs through it and the company has fenced both sides of its right of way and placed a gate so I can go from one side to the other. I have asked for planks for a crossing, but the company refuses and says it is not required to keep up a private crossing. Can I compel the company to make a private crossing and put in a cattle guard at the crossing?

Answer.—You cannot compel the railroad company to make a private crossing nor to put in a cattle guard. The law requires the railroad company to provide openings or gates at farm crossings and cattle guards at all road crossings, but not at farm crossings.

SALE OF FARM—MOVABLE ARTICLES.

A Subscriber, Ogden, Iowa.—I have sold my farm and have several movable hog houses on the place which were not mentioned in the deal. Can I lawfully take them with me when I leave the place?

Answer.—The movable hog houses are not fixtures on the place, but merely personal property belonging to you, and you have a right to take them with you when you give possession of the farm.

EXAMINATION OF SCHOOLROOM DESKS.

A Subscriber, Osage, Iowa.—Has an assistant principal of a high school the right to examine the desk of a pupil, to see what he can find, and on finding an open letter, read it?

Answer.—During school hours the desks and other furniture and appliances in the schoolroom are in charge of and under the control of the principal and teachers and any of them has a right to examine the desks or read open letters found therein.

PARENT AND CHILD—GUARDIAN.

A Subscriber, Orchard, Iowa.—B had a wife and a daughter and sent them away and married again after getting a divorce. Neither B nor his first wife are Catholics. The daughter is not of age. Her mother has married again and will not take care of her daughter. (1) Can B send his daughter to a Catholic school? (2) Has the daughter a right to choose a person for a guardian, and have him appointed?

Answer.—(1) B is the natural guardian of his daughter, and has a right to send her to a Catholic school or any other school that he chooses. (2) The law provides that a minor over fourteen years of age, of sound mind, may select its own guaradian, subject to approval by the district court or a judge thereof in the county where its parents reside, if living with them, if not, in the county of its residence.

DAMAGES FOR ESTABLISHING ROAD.

A Subscriber, Deerfield, Ill.—Some time ago I bought a strip of land on a section line containing nine and a half acres, not knowing that a road had been laid out. The road had not been actually opened. A petition is now being circulated to open the road. Can I recover damages for the land which will be taken for the road?

Answer.—If the proceedings laying out the road were legal and regular, damages must have been assessed in favor of the former owner of the strip, for the land to be occupied by the road, and you can not have damages assessed in your favor, when the road is actually opened. If no damages were ever assessed in favor of the former owner, and he did not grant right of way for the road, you can have compensation made to you.

MOVING ANIMALS FROM IOWA TO NEBRASKA.

A Subscriber, Menlo, Iowa.—When unregistered live stock, such as horses, cattle and hogs, are moved from Iowa to Nebraska, do they have to be tested or examined, and if so, by whom?

Answer.—There is no law requiring such animals to be inspected, before or after moving them from Iowa to Nebraska, unless they are actually in a diseased condition, in which case the owner must report the same to the deputy state veterinarian of Nebraska.

NO INTEREST IN ESTATE—NOT LIABLE.

A Subscriber, Anthon, Iowa.—(1) A and B were sweethearts and were to be married on December 24, 1912. A was not yet twenty-one years old and on November 10, 1912, he died. Can B recover any of his estate? (2) If A had been more than twenty-one years old could she recover any of his estate? (3) A put his team in B's livery barn and while the team was there B walked up behind it and one of the horses kicked B on the leg and broke it. The horse had never before kicked at anyone. Is A liable to B for damages?

Answer.—(1) B cannot recover any part of A's estate. (2) She could not. (3) A is not liable to B for damages.

Two Horses Do the Work of Three

Roller Bearings roll around the axle instead of wearing them out like the ordinary frictional sliding bearing and do away with one-third the usual friction. Our improved hardened steel bushing takes away practically all wear on the bearing and box. Don't think of buying a new wagon until you have seen the

Peter Schuttler Roller Bearing Wagon

The Greatest Improvement in Wagon Construction in 50 Years

Saves horses because it pulls easier; saves time because you can go faster; saves repair bills because the whole wagon stands up better. Roller Bearings need oiling only about once a month and never get hot or tight on the wheel. They are the crowning feature of the old reliable Peter Schuttler "The One Best" wagon that has lead all others for quality since 1843.

Read What U. S. Government Tests Show

Official tests made by Government road experts on common axles in competition with Roller Bearing axles on the same roads report the following:

To Start Load
Common Axle - - - - 850 lbs. pull
Roller Bearing Axle - - 400 lbs. pull

To Haul Load
Common Axle - - - - 260 lbs. pull
Roller Bearing Axle - - 100 lbs. pull

You Can Make the Same Kind of a Saving in Hauling Your Own Loads

PETER SCHUTTLER CO.

JANESVILLE Pivot Axle Disk CULTIVATOR

Manufacturers of Farm Implements

6 Times Over By 3 Times Through

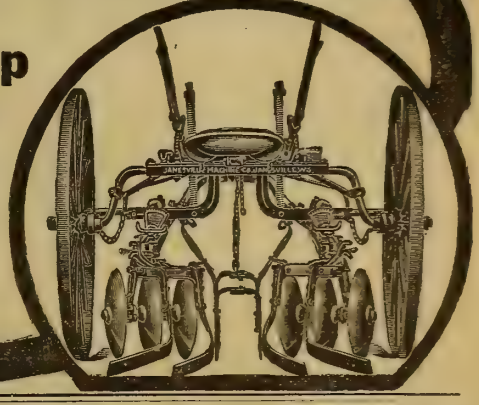
A double cultivation, every time through! That's what the Janesville Pivot Axle Cultivator means. Every advantage of the disk—pulverizing the hardest, baked soil, penetrating trash, cutting through weeds, cornstalks, etc. *And in addition, a perfect surface cultivator* because of our *springy, vibrating surface blades.*

We'll Take The Extra Crop On 40 Acres As Our Pay

We make that absolute *guarantee.* We *know* what the Janesville has done. It is a machine that *makes it easy* to do good work. Levers force disc gangs into hardest ground without extra leg work on part of hired man or boy operator—guiding of disc gangs done by feet on long levers connected direct to pivot axle. Insures farmer that his crop will be well tended. *Surface blade* follows disc gangs, fills up trenches, throws dirt to or from the rows, destroys weeds, drags them out, leaves soil in thoroughly pulverized condition. Combines all features of "special" surface cultivator and disc—leaves soil in best condition for largest yields.

Send Name for our booklet about this splendid money saving implement.

The Janesville Machine Co., 31 Center St., Janesville, Wis.



Factory Prices on Our Roofing

Direct to you at lowest cost. Save money and get a roof that will last a lifetime and is guaranteed lightning and fire proof. Anyone can easily apply it. Saves repair bills. Prevents damage from leaky roofs.

Galvanized Cupolas

Make your stock healthy by keeping a current of fresh air in your barn. Rain and snow can't blow in on your hay. Birds can't nest in it. Made of galvanized steel, outlasts wood ten to one and needs no painting or repairs.

Get more Pull from your Horses

You get more pull from your horses when you use **Gamble Equalizers.** They divide the pull evenly between 3, 4 or 5 horses—even the pull to within a fraction of a pound—make horses' work and your work easier. **Gamble Equalizers** work 4 horses abreast—1 in furrow, 3 on unplowed ground. No chance of tugs rubbing horses' legs. Pull in direct line—no side draft. Each horse has plenty of room and gets its share of the pull.

Style of Equalizer shown here is for use on 16, 18 and 20 inch sulkies, and 12 and 14 inch gang plows with cross clevis hitch. Also on disc sulkies and 12 and 14 inch gangs having wide draw-head. To attach to clevis only one bolt is used. We make clevises and attachments for use with all improvements.

Gamble Equalizers are Guaranteed

to give perfect satisfaction and do everything we say or *money refunded.* They are the original Equalizers—the best—fully protected by patents. No others like them. Do not accept a substitute. Cost so little you cannot afford to be without them.

See them at your dealer's

This weight test proves its perfection

Gamble Equalizers are made for 3, 4 or 5 horses—for wagons manure spreaders, potato diggers, harvesters, hay loaders, etc. See them at your implement dealer's. If he does not handle them, send us his name. We will see you are supplied. Send for

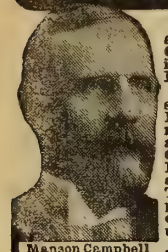
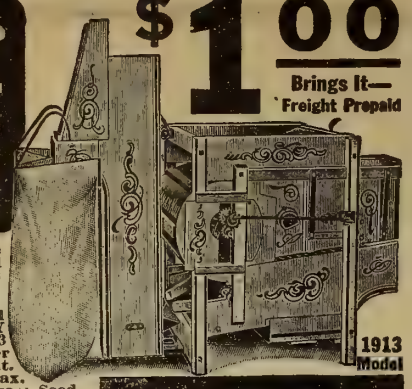
One Dollar

Is All It Now Costs to Have Your Seed-Grain Cleaned and Graded



Manson Campbell



$1.00 Brings It—Freight Prepaid

1913 Model

The CHATHAM Grain Grader and Cleaner

Now that farmers everywhere are cleaning and grading their Seed Grain, the question is, how to get it done *best, easiest* and cheapest. Here's my 1913 offer:

Send me one dollar and I will ship you, FREIGHT PAID BY MYSELF, this improved 1913 model Chatham Grain Grader and Cleaner with all equipment. Clean your Seed Wheat, Oats, Flax, Barley, Peas, Beans, Corn, Grass Seed, etc. Then PLANT those fine seed. AFTER you have harvested a bumper crop, pay me the balance of my low price. Not one penny need you pay, except the $1, until next November. And by November YOUR CHATHAM WILL HAVE MORE THAN PAID ITS ENTIRE COST in INCREASED CROPS. Then you'll have a "Chatham" to work FREE for you the rest of your life.

Your Dollar Returned

if you want it. I don't want your dollar or want you to keep my "Chatham" unless it pleases you. If, after a 30-day test, you are not satisfied, return the machine at my expense and I will send back the dollar.

A Machine That Fits Your Farm

After 40 years' experience, I know every grain and noxious weed grown in America. I know the section where each one grows. I know every grain and weed that grows on *your* farm. Experience has shown that a Grain Grader and Cleaner should have special equipment for the particular farming section to which it goes. For example, I send an *entirely different equipment of screens*, riddles and gangs to Maine from what I send to California. In fact, *there are scarcely 2 states in the U. S.* to which *I send the same equipment*. Thus you get the exact and proper outfit to handle the grains and weed seed that grow on *your* farm. You *don't* have to pay for a lot of extras for which you have no use.

Extra Screens and Riddles Free

In case you want more or different screens, just write me and I will send them free. Not a penny would I ask for extra screens and riddles.

I also have a Free Service Department which will separate, clean and grade FREE any mixture you send in. If you've got some impurity in your grain that you cannot get rid of, don't get discouraged. Write me.

Handles all Small Grain and Grass Seed

My 1913 Chatham handles over 70 seed mixtures—wheat, oats, peas, beans, corn, barley, flax, clover, timothy, etc. Takes cockle, wild oats, tame oats and smut from seed wheat; any mixture from flax; buckhorn from clover; sorts corn for drop planter. Removes foul weed seed and all sunken, cracked or sickly grains. Takes out all dust, dirt and chaff. It is also a bully chaffer. Handles 60 bushels grain per hour. Gas power or hand power. Easiest running mill on earth.

Special Corn-Sorting Attachment

Last year I added a Corn-Sorting Attachment, which grades corn so that a *round* or *edge* drop planter drops the right number of grains in 98 out of every 100 hills (in repeated tests at State Agricultural Colleges). Same planters, loaded with *ungraded* corn, make only 65 out of 100 perfect hills. In two months I shipped to Iowa farmers alone 4,000 machines with Corn-Sorting Attachments. Try my Special Corn-Sorting Attachment. *It will increase your corn crop amazingly!*

Postal Brings My New Book

on Seed Selection. Every chapter is highly practical and exceedingly interesting. It shows an easy, simple way to get rid of any weed on your farm; how to separate any mixture of grains—in short, how to get perfect grain for *sowing, feeding* or *marketing*. Send postal *today* and receive by *next mail* my new Book *free*. Address Dept 50

MODERN GINSENG CULTURE.

To the Editor of The Homestead:

The Panax plant has its best form in Manchuria and Korea if we allow the Chinese people, who are the chief users of the root to be the judges. The American form, which differs a little from the Asiatic, is native to an extensive region adjacent to the great lakes. The plant is found from western New York to the Missouri river, and was in the early days very abundant, but commercial gathering has in many places exterminated it.

The name "ginseng" is supposed to mean "image of man." The forked shape which the growing root sometimes assumes is thought to resemble the human body, and from this fact has perhaps grown the curious, but strong faith that it will cure human ills.

Certainly for ages past it has been used, and very highly esteemed, as a medicine by our brethren in the antipodes. Western physicians of our time do not understand why the Chinese so esteem it, and they insist that it has a physic value only. In other words, the imagination must aid those who use it, the drug should be mixed with faith in the consumer.

But since the culture of the root has become popular among us there are some Americans who have tested its virtues and claim to be benefited thereby. The root is slightly aromatic, and a strong infusion tastes sweetish and mucilaginous.

For sixty years past the pioneer settlers of our central North have dug the native root and sold the dried product to the merchant, and from him it has found its way across the water. The cash value of the American exportation has amounted to an average of a half million annually.

The roots when they are matured at seven or eight years of age, are five or six inches long, and the size of a wienerwurst sausage. But under special conditions the size may be greatly increased. In Asia the culture of the plant has been common for centuries, and it began in America some fifty years ago. It has now taken its place as a staple industry.

About twenty years ago, when there was evidence of a lively boom in ginseng culture, the agricultural department at Washington, issued a bulletin discouraging the business. But this unusual proceeding upon the part of the government farm advisers, while it had perhaps a detterrent effect upon some new enterprise, did not affect the established business. Ginseng growing as an industry is upon a sure footing, and its culture is bringing, to make a conservative statement, as good returns in cash as are realized from the usual farm crops. All over that region which is the naturual habitat of the plant ginseng gardens may be found, and there are very few counties in a half dozen states without ginseng devotees.

Many planters began, indeed, upon a very small scale, and lured by the briliant prospect of eight dollars per pound hoped for immediate wealth. But they soon learned the elementary lesson that profits are always in proportion to the size of the investment.

The man who had capital twenty-five years ago, and sufficient courage of his convictions to invest it in ginseng, has secured good returns, and in some cases enormous profits. Many of the smaller growers have lacked both the means, and the persistence, which are essential to success.

Those who were early in the business reaped large profits from the sale of seed. While the roots have seven years or more, for growth, the plants will seed freely at the third and fourth years. And when the new industry was in the first flush of popular favor, this seed sold at $3 to $5 per hundred—not pounds, but seeds. This was a very timely aid to the cultivator whose patience was sorely taxed in the long wait for profits. But the seed supply outgrew the demand, and that side product of

Put Your Grain in the Sack and Not in the Stack

YOU know that many times there is grain enough wasted in your straw stack to pay your thresh bill. Why? Because you have not insisted upon the best machine to do your threshing. The

Red River Special

saves it and puts the money into your pocket.

Why? Because it employs the only true and certain method of beating the grain out of the straw. All other machines expect the grain to drop out.

The Red River Special **beats it out** just as you do by hand with a pitchfork.

The Big Cylinder, the "Man Behind the Gun" and the uplifting shakers **beat all the grain out** before the straw leaves the machine.

Thousands of farmers are saving their thresh bills by using the Red River Special.

You can, too, if you insist upon a Red River Special doing your work.

Calvin Brown and seven other farmers of Higginsville, Mo., say, "It really does save the farmers' thresh bill by not wasting his grain."

R. F. Lumm, farmer of Percival, Iowa, says "The Red River Special saved all the grain."

You can save yours. Hire a Red River Special. Write for proof.

BIG FREE BOOK ON ALFALFA

HOW TO GROW IT ON YOUR LAND

"Alfalfa—Wonder Crop," is the title of a new book just issued by us. It contains a fund of priceless information on alfalfa growing secured from many sources; United States Government, State Experiment Stations, the best posted authorities and successful growers. This information was secured at a great cost of time, money and research, and yet it is yours for the asking **without cost.** This book will convince you that your farm has some land on which you can grow alfalfa; it tells how to get results from the first planting, how to select the field and prepare the soil, including fertilizing, plowing, liming, and how to prepare the seed; when to plant, how to plant. It tells you what to do during the growing period, how to get bigger than average crops, and how to cut and cure. This book is worth many dollars to the farmer interested in growing alfalfa, but we gladly send it without cost or obligation of any kind if you answer at once. Don't put it off—write for free book today.

GALLOWAY BROS.-BOWMAN CO., BOX 104 S WATERLOO, IA.

MORE POTATOES PER ACRE

Think of finding one to eleven $5 bills in the furrow, on every acre you plant. It's been done many times. Plant the spaces you skip, sell the potatoes, and you've got the money. No extra land, no extra work. It costs no more to prepare ground, fertilize cultivate, spray and dig a perfect stand

IRON AGE (Improved Robbins) Potato Planter

This machine soon pays for itself and yet puts real money into your pocket. One seed piece in every space and one only. Uniform spacing. No injury to seed. Ask your dealer to show it and write us for free booklet, *"100 per cent Potato Planting."* We make full line Potato machines, Garden Tools, Sprayers, etc.

R. H. SHUMWAY, Rockford, Illinois

the ginseng arbor may now be bought at reasonable prices.

Because of the fact that capital and patience are required in this business, many of the small growers are retiring, selling out their beds to the wealthier class, and so the business is concentrating. The general rule holds true here, as in all other human enterprises: The larger the scale of business the more economically it may be managed, and the greater the profits. The more successful ginseng growers of the future will have capital, and will operate upon a large scale.

As a case to the point take the Gilbertson Company. They began work fifteen years ago, and are now the recognized leaders in this industry west of the Mississippi river. Their original plantation is an arbor of five acres, where all the approved methods taught by years of experience are employed. This arbor is high enough to admit of a man walking erect under the shade. The shade is heavy, for three-inch strips are used and only a half-inch is left for light. And the placing of the shades is done with such care, that the most of the rain dripping from the roof falls upon the paths beneath, and not upon the plants.

The beds are laid out in such width as to admit of easy culture. At any given time may be found here beds in all stages of growth, from seeds lately sown, through one and two-year plants up to eight and ten-year roots ready to dig for market.

The estimated value of this five-acre arbor, as it stands is $80,000. Seed is produced here in great quantities, but not for sale, as it is all required for use in the enlargement of their own business, for this arbor is only the beginning of their enterprise.

The company has acquired thirty acres of timber land upon the Cedar river, natural ginseng land, and sufficiently level for practical purposes. The trees remaining are so placed naturally as to furnish sun protection, ample shade for the young plants. The underbrush was all removed a year since, and the land cultivated in preparation for planting. This thirty acres was all planted last September, at the rate of about 200,000 seeds per acre.

For planting, it was laid out in beds, as is usual under arbor culture. for the same care will be required in weeding. The seed was sown six inches apart, and two in a place. This double seeding is found necessary because some seed is imperfect, and fails to germinate. The beds, separated by narrow foot paths are four and a half feet wide, and after they are well prepared, a puncher, handled by two men makes sixteen holes two inches deep at one time. Girls, and women follow dropping seed, which is next covered by a roller.

The methods employed in handling the seed are interesting. When taken from the plant in July or August it is packed at once in damp sand. In about three weeks' time the hull decays and loosens, so that it separates easily as the seed is sifted out. As the seed must not be allowed to dry out, it is again packed in sand where it remains until planting time. Sometimes the seed is sown thickly, with the intention of transplanting when one or two years old.

The roots at one year old are about the size of an angle worm. In the great warehouses of the Gilbertson Company a part of the basement is reserved for handling ginseng. Here were to be seen last fall great quantities of seed ready for the field, and piles of one and two-year roots ready for resetting, or for the market. In one place was a quantity of eight-year roots, fresh dug for the market. This pile, which a horse blanket would completely cover, was valued at $2,000.

As was once customary to have a watchman sleep in the bank vault, so this room was each night under guard, for a robber might easily carry off a thousand dollars' worth of ginseng.

This company is reaching out for all branches of the business. They sell the one and two-year plants at two and three cents each to would-be growers. And whenever a ginseng man of small capital meets with embarrassment and needs to realize they stand ready to take over his venture. In this way it is acquiring small beds in many places.

Mr. Gilbertson is making an effort to improve the variety. There is a difference in plants as usually grown, some having leaf stalks one-third longer than others. It is found that the shorter the stalk the more chunky and valuable the root, so he is developing an improved strain, with the desired short, stubby growth.

When we consider such an enterprise as this company has inaugurated there is a fascination in estimating results. Disregarding the assumption that all estimates based upon hopeful prospects are utterly unreliable, let us figure a little. And we will remember that while liars will figure, it is also true that figures may be so handled as to tell the truth.

Of the 200,000 seeds planted per acre it is expected that fully one-half will germinate. But allowing for some loss and for space taken for paths and shade trees, it is reasonable to expect 80,000 plants per acre to grow and mature. This gives for thirty acres 2,000,000 roots. These roots are expected, when eight years old, and prepared for market, to weigh one-third of a pound each. This gives us 800,000 pounds of the drug, in all, and the market price is $7 per pound. So the total gross value of the crop to be harvested in 1920 is $5,600,000.

It is wise to be moderate in all our calculations, and we will anticipate a partial failure and a decline in price, let us allow 50 per cent for these possible but not very likely losses, and we will still have the very comfortable gross sum of $2,800,000. But over against this there is, of course, an expense account. There are taxes, and interest, rental value of land, and large outlay for labor during the eight years needed to mature the crop. The debt side of the ledger will read something like this:

To 30 acres of land at $200 per acre	$ 6,000
To taxes and rent, 8 years	2,000
To seed for planting, say	10,000
To labor preparing land and planting	4,000
To labor and care, 8 years	5,000
To labor, digging, handling, marketing	15,000
To unforseen expenses	8,000
Total	$50,000

This would seem to cover the expense claims amply, but as this is to be a safe and conservative estimate, let us double the allowance for cost and make the charge for eight years' work, planting, culture, digging and marketing an even $100,000. There still remains the magnificent sum of $2,700,000 as net profit upon the enterprise. But even this is making money too fast, and nobody will anticipate such enormous profits. Let us get

Trees at Half Price

I will sell you, just as I have hundreds of others, my hardy northern grown trees direct from the nursery row at one-half the price you pay agents for poorer stock that has been out of the ground for days or weeks.

My catalog is my salesman. It costs me only one cent to send it to you. You get the saving. It clearly describes and prices my Evergreens and "True to Name" fruit trees—Delicious Apple, Earl Plum, Jones Strawberries and many others.

I stake my reputation on every tree shipped, and personally supervise the work of my employees to see that everything goes out right. That is why I can guarantee my trees to reach you in good growing condition and give satisfaction.

With every tree I sell goes two generations of nursery experience. My father started this nursery in 1869, and I have devoted my entire life to building it up.

100 TRANSPLANTED EVERGREENS $7.50 EXPRESS PAID

A good windbreak of my hardy Northern-grown Evergreens, costing only a few dollars at my bargain prices, will add $1,000 to the value of your farm.

My Evergreens will give satisfaction because my 25 years of experience has taught me how to handle Evergreens, and you get them direct from me before they have been out of the ground more than 18 to 36 hours, depending on where you are. They have been transplanted and root-pruned, assuring them an abundance of fibrous roots, nature's guarantee of life to young trees.

Some people think that Evergreens are hard to start. This is because they have bought of traveling agents whose trees were out of the ground two or three weeks. My trees are shipped direct from the nursery row in well-packed air-tight casings. They are backed by the fairest guarantee of any nursery in the United States and by my 25 years' reputation as Iowa's greatest Evergreen specialist.

Send for Catalog. Send for my catalog containing special bargains of Evergreens, "True-To-Name" fruit trees, shrubs and bulbs, all of which I guarantee to prove hardy or cost you nothing.

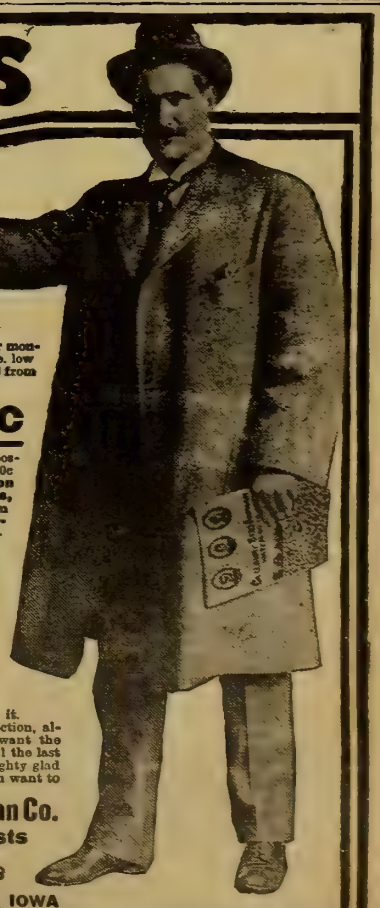
PURE SEEDS



GENUINE—UNADULTERATED

Listen Just One Moment

I want you to fully realize that no matter how valuable your land; no matter how much you hoe, weed and dig; no matter how much the sun shines nor how much it rains; nor how much you irrigate your land. Your efforts are all in vain and your money lost if you get cheap seed. Why take a chance—even if you get your seed for nothing—of sowing stale, low germination test, inferior seed when you can get **Absolutely Pure, Genuine and Unadulterated Seed** from us. We sell only one quality—the best; no second or third qualities.

BIG 50c COLLECTION, 10c

Here is the most valuable seed offer ever offered by anyone. Just send us 10c to help pay postage and expense of shipment and we will send you a big envelope containing five regular 10c packages of our best seeds. This package will contain one full 10c packet each of **Champion Pickle Cucumbers, Matchless Tomatoes, Prize Head Lettuce, Superb Globe Onions,** and a **Large Packet** of **G. B. Mixed Sweet Peas** and never has anything like it ever been offered before. Then here is another thing. The **large envelope in which these five varieties** are packed will be accepted the same as 25c on all future orders you may send in amounting to $1.00 or more. Now, remember, we could not afford to send you this big 50c collection at any such price if it were not for the fact that we know you will be **pleased** with the **pure seed** that we send you and that **we will get your future orders.** Now write us today just enclosing 10c in your letter and you will be delighted with the results.

Get My FREE Seed Catalog IT IS NEW, ORIGINAL AND DIFFERENT

In my left hand I am holding the most original, unique and different seed book that ever has been published. It is profusely illustrated with garden, flower and field scenes and contains the choicest assortment of pure genuine, unadulterated farm, field, garden and flower seeds that you have ever seen in a catalog, and what is more, you can save a lot of money by ordering from this book. Now, remember, this book is absolutely free and will be sent you postpaid on receipt of your request for it. And don't forget at the same time to enclose 10c for the big 50c collection, although of course you are welcome to the catalog even if you do not want the big seed collection. Now don't put off ordering until the last moment. Spring will soon be here and you will be mighty glad to have these seeds on hand at just the moment you want to use them.

INVESTIGATE—Best and Cheapest Seeding Known. Alsike Clover and Timothy mixed. Fully 1-3 alsike, a big bargain. Greatest hay and pasture combination grown. Write for Free Sample and 76-page catalog and circulars describing this wonderful grass mixture. Beats anything you can sow and ridiculously cheap. We handle only best tested recleaned seed guaranteed. Write before advance.

A. A. BERRY SEED CO., Box 603, Clarinda, Iowa

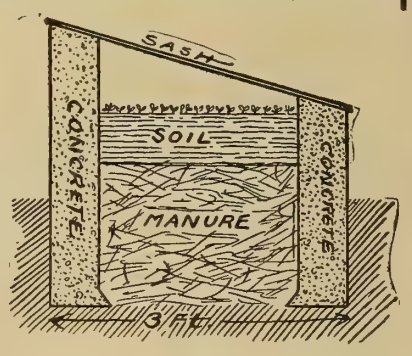
down to a common-sense basis and double the estimated expense and again divide the gross receipts by two—$1,400,000 minus $200,000 still leaves a $1,200,000 gain.

We fancy that most business men would be satisfied with that, which is an annual interest return of 50 per cent upon the capital invested. As will be noticed, even reasonable calculations in ginseng culture look wildly impossible. The most conservative convey the impression that the imagination, like a runaway horse, has got the bit in its teeth and cannot be safely guided. Yet notwithstanding our skepticism, facts will continue to be facts for some time to come at least. We cannot all grow ginseng, but we can all admire the energy and the foresight of those who do it. And also we can see with half an eye that their faith in their business is well grounded.

M. E. Hinkley.

Concrete Hotbed.

Where the hotbed is to stand in the same place year after year, one made of concrete is to be preferred. It may be as cheaply constructed, and is much more satisfactory than one made of lumber. The excavation should be made the required depth, width and length, then the forms made of inch lumber, building up a foot higher on the north than the south side. A wall six inches thick will be strong enough. In finishing up the back and front walls give them the proper slope



so that the sash will fit snugly. The heavy concrete wall will give more protection than could be got with a wooden wall, and will last for a lifetime, whereas wood or lumber will have to be renewed after a few years. The material exclusive of the lumber for forms will cost in most places about $3 per cubic yard, making the cost per square foot of a six-inch wall less than five cents. Any kind of lumber may be used, and the labor need not be skilled.

FERTILIZERS FOR THE FLOWER GARDEN.

To the Editor of The Homestead:

If you want to increase the size and brilliancy of your roses, both in flower and foliage, a liberal dressing of bone meal in the spring before growth begins, or any time during the summer for that matter, will be beneficial. Stir the bone meal into the soil as far as the branches extend. Bone meal is a safe fertilizer, as its elements are slowly released, lasting over a long period.

Where quick effects are desired in feeding roses or other plants that show a sign of starvation, or lack of nitrogen, as is evidenced by slow, hard, close-jointed growth, nitrate of soda is a good fertilizer to use. One ounce to a bucket of water, or one pound to a barrel, is about right. Do not water the plants with this when the soil is very dry, or if the plant is diseased. Apply thoroughly once every ten days at first, and shorten the periods as the plants gain strength.

Strong ammonia, used in the proportion of one pint to the barrel of water, will be found a good nitrogen fertilizer. There is danger in using it too strong. A lady phoned me one day to find out what ailed her fern. She said a friend had told her to water it with ammonia water, and when she had done so it soon began to wilt. She had used one teaspoonful to the pint of water and applied it when her fern was very dry. She should have used a teaspoonful to the gallon. Her fern died.

Fresh cow manure cannot be excelled for making liquid manure, and it is safe. Mix a half bushel or more of cow manure in a barrel of water

Big Money in Oats
AND HOW TO GROW THEM

I want every reader of this paper to write me for my new book, "Big Money in Oats and How to Grow Them." Just mail me a postal or a letter giving me your name and address and I will send you this valuable book together with a free sample of our pure Canadian Grown Regenerated Swedish Select Seed Oats. This book was written by Wm. Galloway, Professor M. L. Bowman and other seed experts. It contains priceless information worth real money about how to make big money in oats, how to make a seed bed, how to start a seed patch, how to make oats stand on rich ground and how to grow a bumper crop of oats. It is profusely illustrated by photos taken from actual life and contains, besides, facts, figures and opinions given by farmers all over the country. Now, remember, this book is **free** for the asking and we will send it to you together with a free sample of the oats or, better still, enclose 10c to cover packing and postage, and we will send you an extra big sample packet, or for 25c we will send you a triple size and for 50c a packet three times the size of the 25c packet. In addition to this, after you have had a chance to examine the sample oats, if they suit you, as I know they will, you can return the empty packets to us and we will accept them the same as cash in part payment on any future orders you may send in. Can you beat this offer? Never.

Feed Your Old Oats to the Hogs

Better feed your old oats to hogs or the horses, or sell them. You can afford to do it when you stop to figure up the net results between our seed and ordinary seed. For instance, which is cheaper—Genuine Imported Regenerated Swedish Select Seed Oats that germinate nearly 100 per cent—every oat sprouting—Fresh, Hardy, Full of Life and Vitality—or oats that are half hulls full of weaklings, that plainly prove they are inferior and run out? Our thoroughbred Imported Canadian oats cost a little more than common seed at the start, but if you pay twice the price and receive common seed for nothing, our oats would be cheaper and bring in the most profit. It's net results that count. Here's the proof.

J. E. Andrews, Dassel, Minn., writes: "Yielded 105 bu to acre." Oscar Kling, Alamosa, Colo. writes: "Yielded 141 bu. to acre." H. Hendrick, Roanoke, Ill., writes: "Got 95 bu. from one acre." A. J. Barber, Clinton, N. Y., writes: "Galloway, you are right. Last spring I bought some seed oats of you Just threshed. Yielded 80 bu. per acre."

Write For New Free Oats Book

We'll tell you how to put your oats growing back on a money making basis—Discard your old in-bred seed oats and start your crop this year with our Regenerated Swedish Select Seed Oats. They'll make you big money.

You can raise 75 to 140 bushels to the acre with our seed. Imported direct from Canada. Extra fine. Send for free sample. It speaks for itself. Our customers who bought from us last year raised from 75 to 140 bushels to the acre against one-eighth to one-half as much from their old seed, which proves our statement that farmers need a change of seed oats in this country.

We specialize on extra fine Seed Oats on our big Canadian Farm—new clean land—and grow the Genuine Regenerated Swedish Select Oats which have broken all records. Specially bred to suit climatic conditions in the U. S. Matures from 12 to 15 days earlier than other kinds. Extra large white berry. Thin husk. Stiff straw. Tremendous yielder. Rich in protein, and just the oat you have been looking for.

Why not start a seed patch on your farm this year? It has paid others big. It will pay you. Write us early. The demand for our seed is tremendous. Last year we had to return orders we could not fill. Write early. Demand tremendous. Supply limited.

Box 102, WATERLOO, IOWA

EXPERIENCE CONCENTRATION PERSEVERANCE

IN THESE three words lies the key to the success of the "Flour City" tractors. The result of fourteen years' specialization continually concentrating on improvements of mechanical design has made the "Flour City" what it is today.

The 1913 "Flour City" surpasses all previous models in mechanical efficiency. It embodies all the desirable features that enter into the construction of a successful farm tractor. Its development has been guided by the requirements outlined by the progressive farmer, along the most conservative lines. Its reputation is of the character that comes through actual work in the field. It stands for QUALITY, EFFICIENCY and SERVICE. Built in three sizes, 20, 30 and 40 H. P. Look up the records of the "Flour City" before placing an order.

KINNARD-HAINES., 857 44TH AVE. NO., MINNEAPOLIS, MINN.

FLOUR CITY TRACTORS

Trojan "More-Corn" Sorter
Wonderful Time Saving Money Making Invention

SAVES THE GOOD SEED, DISCARDS THE BAD. Increases both quality and quantity, sorts corn in uniform sizes so your planter will drop 3 good kernels to a hill 99 times out of 100. None other like it. Your boy or girl can operate it. Just fill the hopper, turn the crank and the TroJan does the rest. PAYS FOR ITSELF ON 4 ACRES. A small investment that is guaranteed to pay for itself on 4 acres. The price is cheap because it is sold direct from factory to you. Get my special low freight prepaid price, and my special free trial offer and guarantee. Write for illustrated circular and price today. Address

The Old Way — The New Way

Important paint facts—for you

You want your house to look as well as your neighbor's. Before you paint, learn of the greater advantages of "High Standard" Liquid Paint—the paint that is scientifically made. The guesswork of the old way is now replaced by tested and proved scientific methods enabling us to produce paint of the greatest adhering and protecting power. High Standard Liquid Paint is the one paint to use on the farm house, where exposure to sun, wind, storm and frost requires the best protection. Lowe Brothers Barn Paint is exceptionally durable, and like High Standard its great spreading quality makes it economical for large surfaces. For home interiors decorate with Lowe Brothers Mellotone, the modern flat wall finish, which you can apply yourself. Its colors are very soft and beautiful; and it is washable and fadeless. Send for color cards.

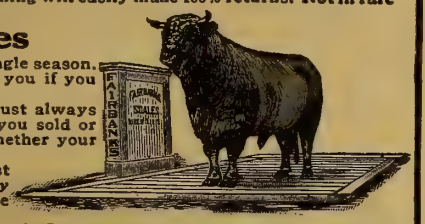
What Do You Consider a Good Investment?

Eight per cent would be called good returns. Do you realize that owning your own scale and doing your own weighing will easily make 100% returns? Not in rare cases but frequently farmers who own

Fairbanks Scales



find the scales pay for themselves in a single season. They will yield just as good returns for you if you sell much produce or stock.

Until you have your own scale you must always wonder if you got full weight for what you sold or paid too much for what you bought; whether your stock is gaining properly, etc.

Buying Fairbanks Scales is in the highest sense an investment because you *only buy once.* Scales installed over 60 years are still in service and weighing correctly.

Scales for all farm purposes are described in Catalog No. SR603 Write for a copy.

BIG **FREE BOOK** ON

CLOVER

A gold mine of information

We have just published a wonderful new book entitled "Clover, the Great $Cash Money Crop$." It tells you how to get a sure "catch" first planting; how to keep clover in the rotation; about clover as a soil enricher; how to handle the crop for hay and seed production; how to grow clover that makes richer feed—that produces more beef and milk. It explains the cause of clover failures; how to avoid winter killing; how to prevent ground heaving; how to guard against the loss from heat and drought; all about the causes of "clover sickness" and how to deal with it. Hundreds of other questions, covering sixteen clover varieties, are fully answered. Ordinarily this book sells for 35c, but for a short time we will mail a copy free, or until a certain number have been distributed. Write at once.

When writing to advertisers please mention The Homestead.

good crop of celery if well cared for, but sandy loan is perhaps the best. The land should be plowed at least several weeks before planting. I get bettor results, however, when I plow in the fall and leave the soil exposed to the action of the frost. In the spring when the land can be easily worked up I go over the rough-plowed surface with a disk and then drag and harrow until the soil is smooth and loose to a depth of at least six inches. I am very careful to have the surface even. At the time the surface is prepared a good top dressing of manure is worked in.

As a usual thing I order my seeds from a seed man early so as to get good seed and I make no objection to the price if the quality is good. High prices with high quality is better by far than low prices and no crop. After planting the seed I water them enough to keep the soil moist and see that they get plenty of sunshine. I never allow the ground to become dry for this retards growth. If cultivation is kept up it is seldom necessary to apply water in the field, but while they are yet in the boxes they should be watched carefully. About five weeks after planting I transplant the seedlings to trays. This I find has a tendency to form side roots and where double transplanting is practiced it does away with thinning and a consequent waste of many plants. The second time I remove the plants they are placed outdoors in the field and I am very careful not to destroy any part of the plant, especially the roots. Then tender young plants are placed in holes made by a roller or small cart wheel with projecting pegs. I plant in single rows about three feet apart and have the plants from four to five inches apart in the rows. By this method I can cultivate them with a horse cultivator or with a wheel hoe and can bank them more easily. After they are placed in the field I cover the soil about the plants with well-rotted horse manure. This not only keeps the soil in good condition, but helps the growth on account of its qualities as a fertilizer. If these means are resorted to only shallow cultivation is necessary. Also no cultivation by hand is necessary except to pull out weeds that may happen to come up. The manure mulch holds the moisture and the soil will require only such cultivation as is necessary to keep the soil loose and free from weeds. Watch for insect enemies the most common of which are the grasshoppers, the celery leaf tier, the celery caterpillar and the tarnish plant bug.

The next important step is the blanching process. I tie the plants up so that they are straight and compact, then pull away some of the outer leaves and place tiles over them. The leaves will draw up to the top of the tiles and thereby shutting off the light from the stem of the celery plant. This may sound expensive, but is not since the tiles can be used season after season and the better grade of celery commands a better price. The tiles keep the plants cool during the hot part of the day and keep them tender. As soon as the celery is nice and white I trim, clean and pack them in bunches for the market. I aim to make them very attractive. If a good market is not ready I pack them just as they come from the garden in moist sand in a well-ventilated cellar. They will stand quite a little frost, but should never freeze. Last year in our home market I sold 1,400 bunches at twenty-five cents per bunch and received a net profit of over half the amount received besides having all the celery we could use at home.

All localities do not demand the same variety and any one who plans to grow celery for the market should first learn what his locality demands. It is producing a product that the people like on first trial that counts for future profits. L. Marshner.

Wisconsin.

and let stand several days until it ferments, stirring occasionally. Draw off the liquid and dilute until it is a light brown, or straw color. Saturate the soil around your healthy plants with this solution once a week and you will be surprised at the results.

Cannas, caladiums and bananas want a very rich soil and plenty of water. A depression around these plants filled with manure and watered freely will give wonderful results, well worth the trouble it takes. Half-decayed horse manure is excellent for this purpose, as it is warmer than cow manure. A few droppings from the henhouse mixed with the horse manure greatly increases its strength.

Be careful how you mix manure in the soil when setting out plants or shrubs, for it is very detrimental to many plants, and beneficial to very few, unless it is so decayed it resembles dirt, and then it should be thoroughly mixed with the soil you use. Tender rootlets are quickly injured by contact with decomposing manure in masses. L. H. Cobb.

CELERY FOR THE MARKET.

To the Editor of The Homestead:

Celery has now become one of our most common garden crops. The demand for good, tender celery is greater than the supply and as a consequence good prices are offered. Almost any fertile soil will return a

SOAKING SEEDS A GOOD PLAN.

To the Editor of The Homestead:

We often give seeds a good soaking before planting, especially those planted in early spring, as the season at this time often is unfavorable for out-door planting, on account of the chill in the damp soil causing the seeds to rot before they have time to germinate.

Then where the seeds are soaked before planting, they will propagate

SEED POTATOES FOR SALE—Pure-bred, best varieties. Address Guy Anderson, Ogdensburg, Wis.

stronger plants than those seeds which are deposited ir the soil while dry and lie there till they absorb moisture, swell and sprout. This is especially true of such hard-shelled seeds as beet, cane, bean, etc., as the tough, outer covering is hard for the tender sprout to penetrate, and many times conditions thus check and ruin the germinating process entirely.

We soak the seeds to be planted in a basin of warm water, immersing the seeds into it and leaving there for from twelve to twenty-five hours, according to the kind of seed, their adaptability to soaking, signs or germinating, etc. As a general rule, we soak the grains till they swell and begin to show where the sprout will burst out; sometimes we even carry on the process till the grain sprouts, and this is a good plan where they are not so tender they would break in handling while being planted. This applies, of course, only to moderate-sized plots that are planted to truck, garden stuff, etc., as the dampening of the seeds will not admit of their being placed in a drill or planter and deposited in the earth.

M. Coverdell.

Cole county, Mo.

RAISING GEESE.

To the Editor of The Homestead:

Of all the side lines on the farm we find none that gives better returns for the time and money invested than geese. They are the hardiest fowl upon the farm and do not require much of any outlay for buildings. The greatest expense is for pasture. They must have pasture and if the flock is large quite a piece of land will be necessary. The greatest objection is that the pasture is practically spoiled for other stock. This can be arranged, however, for there is pasture enough for a large flock along the road of almost every farm which ordinarily goes to waste. This might just as well be used for goose pasture and thus turned to account. Now the only objection left is the disagreeable noise they make, but we soon get used to it. Geese will not thrive under pampering. Close housing is a positive mistake and failure will surely result where it is practiced. Fresh air is even more important in rearing geese than in any other live stock venture. Geese do not need or want much grain and if left to themselves will graze like sheep or cattle and thrive. They may be raised in pens if not crowded and if green stuff is cut for them, but not with the same success as when allowed to do their own grazing. Breeding stock or such intended for that purpose should be allowed free range at all times, but market geese may be penned and fattened as soon as their wings and bodies are completely feathered. Geese are long lived and good breeders can be kept for a long period and produce much profit. Two geese are enough for one gander and we sometimes get better results in pairs. If one wants to start immediately into the business old breeders should be purchased in the fall as they are slow to get accustomed to each other and their new surroundings. Old geese are the best breeders. If a start is made with young stock one must wait until they are three years old before best results can be had, but it is worth while for one can always know the age of their breeders and suitable stock can be started with.

After they are known we mark breeders with leg bands and thus distinguish the males from the females. This cannot always be done with the eye. These bands come in handy in the fall too when it is hard to distinguish the old from the young. Geese usually start laying in February and lay about twenty eggs and then set. We remove the goose to a box giving nothing but water for a few days and then if put back she usually starts to laying again in a few days. There are many, many farms on which geese could be profitably introduced and they would become an extra source of much appreciated income. Every year we have a nice little income from our flock which grazes along the roadside. This is nearly all clear profit for the rearing costs us little. C. J. Griffing.

"INGECO" ENGINES

IOWA'S LEAD IN LIVE STOCK AS SHOWN BY RECENT STATISTICS.

According to a statement prepared by the Iowa Department of Agriculture Iowa's supremacy in the live stock field is more marked in this period of high prices than ever before. The Hawkeye state leads all other states in the number and value of her farm animals. The figures up to January 1, 1913, have just been announced by the United States Department of Agriculture.

The total value of Iowa live stock January 1, 1913, was $393,482,000. The state exceeds her next nearest competitor, Illinois, in the value of her live stock by $55,492,000.

Iowa leads all of her sister states in the value of her horses and also in the value of her swine. She is first in beef cattle with the exception of Texas. She leads all of the corn-belt states in sheep, but does not have the sheep that many of the far western states show. In all lines of live stock, however, she is so strong that the sum total surpasses that of any other state in the Union.

All of the swine in twenty-eight states of the Union do not equal in value those of the state of Iowa. The territory which includes all of the North Atlantic states, all of the South Atlantic states and all of the far western states, has swine to the value of $101,884,000, while the swine of Iowa are valued at $104,640,000. In fact Iowa has more than 14 per cent of all the swine in the entire United States and in value they amount to more than 17 per cent. Iowa's population is only 2,250,000, while that of these twenty-eight states is more than 50,000,000.

Beef cattle are comparatively scarce in Iowa, now, as is the case throughout the entire country, but the Hawkeye state has more beef cattle than all of the North Atlantic states combined. She now has over 2,607,000 beef cattle on her farms. The annual marketing of beef cattle at the seven principal markets of the United States amount to 8,000,000.

Prices for live stock are high. Horses in Iowa are averaging now $120 per head while the average price in the past ten years has been $96 per head. Beef cattle average $33 per head while the ten-year average is $22.30. Swine averages $12 per head here in Iowa while the ten-year average has been $8.60 per head.

These figures show that Iowa live stock products go a long ways toward feeding the world. And this, too, at a time when the demand is great and the products scarce.

DEATH OF CHARLES H. GARNER.

Charles H. Gardner died suddenly at his home at Blandinsville, Ill., February 13th. Mr. Gardner was for several years one of the most prominent Aberdeen Angus breeders and showmen in the country. A decade ago his bull, Rosegay, was one of the sensations of the show rings, and Mr. Gardner's herd was one of the strongest on the circuit. Some six years ago he dispersed his cattle at public sale, and since that time has devoted his attention to the carrying on of farming operations at his Blandinsville farm. He is survived by Mrs. Gardner.

HAMPSHIRE SWINE ASSOCIATION ELECTS OFFICERS.

At a meeting held recently at Washington, Iowa, the Iowa State Hampshire Breeders' Association elected officers for the ensuing year. Mr. George T. Pearce, of Bloomfield, Iowa, was made president and J. E. Beckendorf, of Walnut, Iowa, secretary and treasurer. The breeders present at this meeting were enthusiastic over the rapidly increasing popularity of the breed and the year 1913 is expected to eclipse all former records.

An electrical engineer hit upon a good scheme to keep his automobile in shape for winter service. During the cold weather he keeps a sixteen-candle-power incandescent lamp, of the old carbon filament type, burning inside the engine hood to prevent the raditor from freezing while the machine is standing in the garage. Not only does it prevent freezing, but it keeps the engine warm so that it can be easily and quickly cranked.

Better Than Money In the Bank

is money put into good paint.

Good paint will earn you a far bigger dividend on your investment than the paltry 3% or 4% which banks allow.

Good paint, from the day it's put on, adds every penny it costs or more, to the value of your buildings. Oftentimes it increases property values 10 to 33⅓%.

Well painted buildings are a delight to the eye and a pride to the owner. What better enjoyment can money bring?

Good paint is not expensive. But it protects and preserves property that is expensive and saves untold expense in indefinitely postponing repair and rebuilding.

Invest liberally in paint—but be sure you get **good** paint. Otherwise it will be a disappointment instead of an investment.

You can **bank** on the goodness of

Lucas Paints

They are as sure to be good quality as U.S. dollars are sure to be worth 100 cents. Good paint materials are as standard in value as gold. Our methods of selecting good materials and combining them into paint are as standard as the methods of coining gold dollars, too. We never guess or take a chance. We select our materials according to chemical analysis. We take no one else's word that they are pure and right, but **prove** them ourselves.

Brains, Experience, Equipment Count Most in Paint Making

Our experience dates back sixty-four years. Our men in charge have had twenty-five to forty years experience with us. They are the best paid, most careful and loyal force of paint-makers anywhere. The equipment with which our huge plant is filled is the most modern, efficient and dependable in the country.

64 Years' Experience Concentrated in Lucas Paint

Our established standard is the finished perfection of 64 years' of paint-making. Every batch of finished paint is compared with **standard** for color, working quality and strength and **must** match **perfectly.** It is all this greater experience and brains, all this mistake-preventing inspection, that makes "Lucas" mean **certain satisfaction** on a can of paint, and that makes "Lucas" the kind of paint it will pay you to buy.

FREE BOOK "When and How to Paint"

tells the important things to know when buying paint, varnish or enamel. Will help you select the **right** paint for your house, buildings, etc.--tell you how to refinish furniture--how to enamel an iron bed, sink or bath-tub--how to paint screens, porches, pantry shelves--farm machinery--vehicles--and dozens of other things. You'll keep this book always as a reference book. Send the coupon today for a copy. Be sure to give the name and address of your dealer.

More Feed Less Cost

Greatest capacity, lightest draft. *Force feed*—can't clog. No burrs. Rollers grind 5,000 bu. cob corn before dulling. New set costs only $6.

The Roller Grinding **Bull Dog** -Try It Ten Days Free

Not a cent until the mill has made good. Back at *our expense*—if it isn't the best, most economical grinder you ever saw. Write for details, stating H. P. of engine. **Leiz Mfg. Co.**, 123 East Road, Crown Point, Ind.

Keep Well Water Clean

Northfield Well Curb

Most stomach troubles, rheumatism, malaria and typhoid are due to drinking polluted water. This Sanitary curbing keeps water pure. Lasts a lifetime. Economical. Easy to install. Quicksand or any soil. Fits any well. Always bright, tight and clean. For wells, pits, springs, reservoirs, etc. Write direct to factory for catalog. Address Northfield Iron Co., 118 Water St., Northfield, Minn.

Harvey Bolster Springs

prevent damage to eggs, garden truck, fruits, live stock on road to market. Make any wagon a spring wagon. Soon save cost—produce brings bigger prices—wagon lasts longer—horses benefited—thousands in use—"my wagon rides like auto" says one. Get a pair at dealers. If not at dealer's write us. Insist on Harvey's. 40 sizes—fit any wagon—sustain any load to 10,000 lbs. Catalog and fistful of proofs free.

HARVEY SPRING CO. 734 15th St., Racine, Wis.

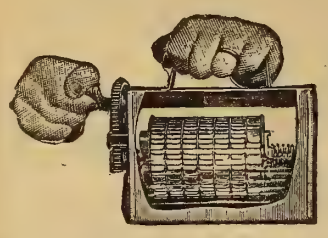
Clarke's Hog House

Prevents disease, destroys lice. It's indestructible—will last a life time. It's scientifically constructed to **Save All the Pigs.** Made of all galvanized, rust-proof, extra heavy metal with a patented door. Can't be broken or get out of order. You can roll Clarke's Hog House anywhere and open the top of it to let the sunshine in. **Write for prices.**

Ben Hur Mfg. Co., 76 Main St., Crawfordsville, Ind.

Wash Your "United States" Cream Separator Mechanically

This System is Revolutionizing the Method of Cleaning Separator Bowls

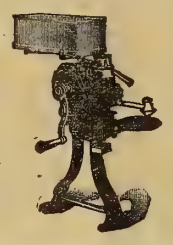


The United States Cream Separator is best adapted for mechanical washing, owing to the scientific arrangement of the skimming sections which drive the washing water with great force through the skimming device, actually scrubbing all parts of the metal.

The mechanical washing is made still more effective by the U. S. **non-rusting** skimming sections of **nickel silver** and by the absence of obstructions in which or behind which milk and dirt can lodge.

By the use of the U. S. Mechanical Washer a United States Separator is cleaned in practically **half the time** of other separators, besides saving strength and making the work far more pleasant. The turning of a crank washes the skimmer.

In addition to its easy cleaning feature the 1913 model "United States" is one of the **lightest running** separators on the market, due to a reduction of the bowl diameter nearly one-half that of older models and to improved gear construction, and is admitted the closest skimmer, a fact backed by the **World's Record** won in an open contest in which all separators were allowed to enter, embracing **fifty consecutive** runs, lasting over **thirty days** and covering milk from **ten different** breeds.



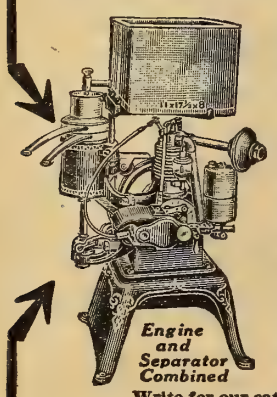
Our catalogue describing these and other big features is free for the asking. Get one from your local U. S. dealer or write us today.

VERMONT FARM MACHINE CO.

Bellows Falls, Vt. **Chicago, Illinois**

15 Distributing Warehouses from Coast to Coast

"AUTOMATIC" CREAM SEPARATOR Magneto Equipped



Engine and Separator Combined

This is our latest improvement. Protects ignition of the little gasoline engine even better than the battery and coil system hitherto used with excellent results. The "AUTOMATIC" is now more automatic than ever. Not even a battery to renew nor a coil to adjust.

The Engine is a Little Wonder

It is only a ½ horse power but has double the capacity needed. Compactly built into the separator itself. Starts dependably, by the simple pulling of a cord. The engine will do any work on the farm that man power can do. And it won't balk. The self regulating gasoline feed keeps it running, whatever the atmosphere or load.

It Runs for Hours Without Watching

There is nothing to watch but the fuel supply, and that is good for a six hours' steady pull. The "AUTOMATIC" requires no cranking. It skims while you milk. And it skims closer than can be done by hand power.

Write for our catalog No. 7. It is filled full of practical facts about the use of gasoline power in a cream separator. This is information which every up-to-date dairyman should have.

STANDARD SEPARATOR COMPANY, POST OFFICE BOX K-33 **Milwaukee, Wisconsin**

$2 The Price You Get for About 8-lbs. of Butter Puts This Big Fine SEPARATOR in Your HOME

Then the machine itself will earn the other easy payments before they are due. You have the machine to use twice a day on your farm. You get **one-fourth** to **one-third** more cream—have fresh, warm skim milk for the calves, pigs and chickens—make work easier for the women folks and before you realize it this big money maker is all paid for out of your extra cream profits. You don't feel the cost at all, especially at our low factory-to-farm prices of only $24 and up.

NEW BUTTERFLY

$24 and Up

New Butterfly Cream Separators are sold **direct from the factory to you.** No agents' commission—no dealers' profits to pay. No interest—no extras. You save half. For example—$24—(payable **only $2 down and $2 a month** for 11 months) buys the New Butterfly Junior No. 2—light running, easy cleaning, close skimming, durable. **GUARANTEED A LIFETIME.** Skims 95 quarts of milk per hour. Made also in four larger sizes up to No. 5 1-2, shown here. Free colored folder tells which size you need.

30 DAYS' FREE TRIAL — LIFETIME GUARANTEE

We ship any machine we make on 30 days' FREE TRIAL—allow you to use it on your own farm—test it in every way. If you are not fully satisfied, send it back at our expense and we will refund all you have paid, together with *freight charges both ways*, so you will not be out one penny. You can't afford to miss this opportunity to get a cream separator. You take no risk. Write for FREE CATALOG FOLDER and Factory Price List TODAY.

ALBAUGH-DOVER CO., 2262 Marshall Blvd., Chicago, Ill.

The Silo That Won!

We admit it was no easy matter to put the Saginaw at the top. The greater part of seven years passed before Dairymen and Stockmen came to know the **Saginaw** as the one best Silo. During those seven years, we popularized the All-Steel Door Frame; and we designed the now-famous Inner Anchor; then the Saginaw Base Anchor; and the Angle Steel Rib, which marks final perfection in Silo building. In those seven years we've grown from one small Silo plant to five huge, modern Silo Factories. Our sales in a single day have totaled 587 Silos.

The Saginaw stands strong and immovable as a big City Skyscraper. No storm can twist it or tilt it or shift it on its foundation. And every pound of Silage that goes into a Saginaw comes out bright and clean. That's why leading farmers choose it.

Write! Our latest Silo Book is ready—the best we've ever had. Send for it and you'll see why experienced Dairymen and Stockmen everywhere are putting up Saginaws. Postal sent now brings handsome Book 34, by return mail.

The McClure Company (formerly Farmers Handy Wagon Company)
Saginaw, Mich. Des Moines, Ia. Minnesota Transfer, Minn. Ft. Worth, Tex. Cairo, Ill.

OUR DAIRY DEPARTMENT

ALL communications relating to dairy matters should be addressed to this office. Inquiries of general interest regarding dairy management and production will be promptly answered.

HOW TO BEGIN THE DAIRY BUSINESS.

To the Editor of The Homestead:

The old adage, "Be sure you're right, then go ahead," is directly applicable to the case of the man who is going to begin the dairy business on a more or less extensive scale. To get a good start means that success is at least well assured in almost any undertaking, and I shall completely ignore another old saw which suggests anything different about endings under opposite conditions.

The project should be talked over in the family. The wife ought to have a chance to express her opinion, and her ideas may usually be depended on to be not far out of the way on any question of importance. If there are growing boys in the family it will be well to talk the matter over with them also, for their assistance will be needed in the milking and care of the cows. If there are no boys, is there other help which can be relied upon by hiring or will the owner have to do most of the work himself? Is there a shipping station conveniently located or is there a good market other ways, or is there a cheese factory or creamery within a reasonable distance so that long hauls may be avoided? Are the roads reasonably good between the farm and the place where the milk will have to be hauled? At seasons of the year when the roads are bad this means much to the man who must travel them once every day, rain or shine. If there are others on the route and they combine to hire a man to do the hauling or take turns in doing it themselves this means heavier loads to haul, all of which works into the convenience or inconveniece of shipping the milk. These things having been favorably passed upon, let us see what suggestions will help the man who is just beginning in the dairy industry.

He must not forget that upon himself individually rests the responsibility to a very great degree and his must be the brain to run the business end of it. Moreover, he must be a man with a keen interest in cows, a student of cow nature and something of a scientist to boot, for the day of scientific farming is here and will not and cannot be ignored. In order to succeed, he must know or be willing to learn how to formulate a balanced ration. He should be familier with such subjects as deal with carbohydrates and proteid, and know where to find them in the various foods grown upon the farm, as well as purchased, and how best to combine them as a ration for the animals. Yet to the man of ordinary intelligence there is nothing of a scentific nature connected with the undertaking that need deter him from entering upon it. It will sharpen his wits, it will get him to thinking, and that is exactly what farmers need to do.

The next step is to decide upon the breed of cattle to keep. If he is a poor man financially, buying high-priced stock may be out of the question, although if it can be in any way managed the purchase of one or two such animals will prove a good investment. A good way is to buy a young calf or two of the breed selected. These quickly grow to maturity, and into money also. A chance to get a calf cheaply may many times be found through people in town who keep but one cow for family use. Another way is to buy an aged cow of good breeding, which can usually be gotten cheaply. This plan is not always satisfactory, as such animals are very likely to be shy breeders. Having tried both plans I would recommend the purchase of well-bred calves, heifers, of course, which can be had at moderate prices. I have known a well-bred Jersey bull calf eligible to registry to go for $10 because the owner did not want it and was willing to take that sum rather than keep or kill it.

The matter of breed is one worthy of much careful thought. What breed to select depends somewhat upon what disposal is to be made of the milk and also upon the personal preference of the individual. If the milk is to be sent to a condensary, I would

have no hesitation in recommending the Holsteins, as they give a large volume of milk, although not ordinarily testing very high. For the retailer there is no doubt that the richness of the milk plays an important part in holding his trade, and the straight Holstein fluid cannot always be relied upon to show the amount of cream on the tops of the bottles that customers demand. A mixed herd may be made to pay admirably by careful selection and testing, but there is not the satisfaction in it. For the production of butter fat, or where cream is to be sold, there is no question of the supremacy of the Jersey or the Guernsey, the two acknowledged breeds which are so nearly related that there is really little difference between them. Repeated tests have given the Jersey the lead as an economical producer of rich milk, and the man who decides upon this as the breed to go into the dairy business with will make no mistake, if that is what he wants.

For the beginner I think it is well to keep the best cows already in the farm herd. Breed these to a pure-bred sire, selecting the kind decided upon. It will not pay to change, but continue from year to year the same line of breeding. As the heifers grow up breed these in the same way, keeping always in mind the productive advancement of the herd. The Babcock tester is an absolute necessity, and at the very beginning all cows of the herd should be tested. This, combined with weighing the milk from time to time, will give a good idea of each cow's value. Still better is the plan of weighing the milk separately every time and testing it once a month. In this way a complete record is secured and each animal's performance is known at the end of the year. The ribbon cows are thus detected and the best producers determined. I would keep no cow that does not show better than a 4 per cent test in a butter or cream dairy.

A good sire should be retained in the herd as long as possible, and none but a pure bred should be used. Frequent changes are not to be recommended. Worst of all is the practice of using a Jersey one year, a Holstein the next, with a Short-horn or Red Poll the third. One should not try his hand at improving his herd by cross breeding. Violent crosses are never advisable. There are enough good animals to be had in any breed and nothing will be gained by mixing them. One may think that by securing a Jersey-Short-horn cross or a Jersey-Holstein that the result be a larger yield of rich milk, but this is rarely true. The best plan is to select a breed and then stick to it. Give it the best possible attention at all times. Weed out the inferior animals as soon as they exist. Care for and feed the other intelligently, and there is not one of the dairy breeds but that will make money for their owner. I am quite sure that no one will make a successful dairy herd out of any but a pronounced, acknowledged dairy breed. To be successful one must give strict attention to all the details connected with the business. The two greatest essentials are good stock to work with and feeding the right kind of a ration.

Subscriber.

RAISING CALVES WITHOUT MILK.

To the Editor of The Homestead:

To raise calves without milk and get good growth and proper development is by no means an easy thing to do. A few farmers have raised good calves in this way, but they are exceptions, and are the kind who pay close attention to their animals, giving them the best of care, and keeping them in the best of health. Many others who have tried the experiment have failed, either losing their calves or badly stunting them.

Calves should by all means have whole milk for the first two weeks of their lives in order to get their digestive and assimilative organs to working properly, and to furnish them with bodily vigor which will help tide them over the weeks when they are not getting their natural sustenance. The best dairymen allow the calves to nurse their mothers for a day or two after birth, and then feed them warm, fresh milk, which after two weeks is gradually diminishing in amount, and skim milk or water is substituted, a little at a time.

The most common mistake in feeding calves, particularly where they are given other feeds than milk, is overfeeding them the first two or three months and thus getting their digestions disturbed and their bodily vigor reduced. Overfeeding produces indigestion and a general weakening of the system even where it does not cause diseases of a serious nature. Experienced feeders would advise no one to try to raise calves without at least a little milk in connection with the other feeds during the first six weeks or two months; even two quarts a day of skim milk will have a very beneficial effect. A little milk mixed with flaxseed gruel will produce a very fair growth and development if good judgment is used in feeding.

To make this gruel, add ten quarts of water, to one of flaxseed, let soak for several hours, and then boil for one hour, or until the flaxseed has been transformed into a jelly. It is best to use flaxseed from which the oil has not been removed. Enough of this gruel may be prepared at one time to last for several days, if conditions are such that it does not sour or spoil. It should always be heated to bloodheat before being added to the milk and fed. Experienced farmers never feed this gruel before the calves are two or three weeks old, and then but a little at at time until they become accustomed to it. At first a quart of the gruel three times a day, mixed with a little milk is a good ration. As the calf becomes accustomed to this, diminish the quantity of milk, and increase the amount of gruel until, two or three quarts may be fed three times a day, if the calves are always hungry and show no harmful effects. Until they are over three months old, more than three quarts of this mixture is apt to prove injurious.

In connection with this feed, a grain ration and a little bright clover or

This Man Knows Cream Separators

Farmer Onswon's Advice to Farmers

Look at this BEATRICE. I paid $75 for it instead of the $100 to $110 usually asked for less capacity. It's the only A No. 1 separator on the market which has these two most important virtues:

Highest quality and fair price.

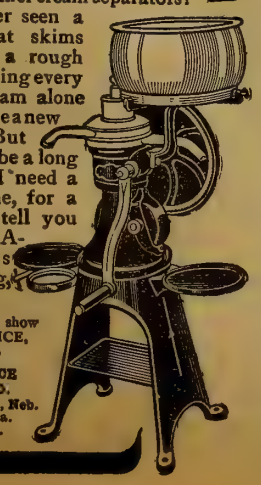
1,000 lbs., $75. They have smaller machines for less money.

Twice a day I spend *less than 2 minutes* to make this

BEATRICE Cream Separator

scrupulously clean and sanitary. The patented device does the trick. How's that compared with the time it takes to clean some other cream separators?

I have never seen a machine that skims closer. At a rough guess my saving every year on cream alone would buy me a new machine. But it's going to be a long time before I need a new machine, for a glance will tell you that the BEATRICE is built for long, long wear.



Let your dealer show you a BEATRICE, or write direct to

DE LAVAL CREAM SEPARATORS

No Excuse for any Cow Owner Being Without One

There is no reason why any cow owner who sells cream or makes butter should be without a cream separator and there is no excuse why he should not have the best separator.

Any creameryman or experienced dairyman will tell you that a good cream separator will give you a great deal more and a great deal better butter than you can make with any gravity setting system, and equally, of course, more and better cream, if you are selling cream.

The DE LAVAL is acknowledged by creamerymen and the best posted dairymen the world over to be the **"World's Standard"** and the one and only separator that always accomplishes the best results possible and always gives satisfaction.

You cannot make the excuse that you can't afford to buy a De Laval, because it will not only save its cost over any gravity setting in six months and any other separator in a year but is sold either for cash or on such liberal terms that it will actually pay for itself.

A little investigation will prove to you that the truth of the matter is that you really can't afford to make cream or butter **without** the use of a DE LAVAL cream separator.

The nearest De Laval local agent will be glad to demonstrate this to your own satisfaction, or you may write to us direct.

THE DE LAVAL SEPARATOR CO.
NEW YORK CHICAGO SAN FRANCISCO SEATTLE

Use it 10 Weeks FREE

NO MONEY DOWN

KING Sanitary Cream Separator

$24.95

Four Sizes Capacity Up To 800 lbs. per Hour

Send No Money

Choose Your Own Terms

We don't ask you to send a penny, make any deposit or obligate yourself in any way. Simply try a King Sanitary Separator in your own home or dairy for **Ten Weeks Free,** just as if you owned it, test it with warm or cold milk, and if it doesn't separate all the cream right down to the very last drop in finer condition and do it easier than any other separator on the market, bar none, then return it, **at our expense,** the trial costs you nothing.

Cleanest, Simplest, Most Efficient, Absolutely Sanitary

The KING skims warm or cold milk more thoroughly and easier than any separator made, **regardless of price.** Positively never defeated in a skimming contest. Strong, durable, runs very freely; has all latest improvements including our improved separable disc bowl. Simplest machine to clean, all parts readily accessible. No nooks or corners to gather or hold dirt. After ten weeks **Free Trial,** if you decide to keep it, you can choose your own terms to pay.

The **KING SANITARY SEPARATOR** in all sizes cost you only one-half as much as agent's machines. Buying direct from our factory saves you all the expense of the agents, salesmen, stores, wagons, etc. To prove our claims, we make the **most liberal offer ever heard of.**

Life Long Guarantee Should any part of the King Separator prove defective in material or workmanship during the entire life of the machine, we'll replace it with a new and perfect part absolutely free of all cost to you and prepay all express charges.

Our million-dollar-factory stands back of every KING Separator.

This is your opportunity to save money. It is to your advantage to read our descriptive catalog immediately. **Send for Free Catalog at Once.**

mixed hay should always be fed. If this is not done the calf's digestive apparatus is very liable to be deranged. The grain ration may consist of a number of ground feeds, which later should be changed to whole grain. Some good combinations are ground oats, and bran; corn meal, ground oats and bran; oats or barley and corn chop. A mixture of twenty pounds of meal, twenty pounds of oil meal or bran, ten pounds of blood meal and five pounds of bone meal makes a very good standard ration for calves from three weeks to three months old. It has been found that where a great deal of the grain ration is left where the calves can have easy access to it at all times they do not thrive as well, as they do when but a little is fed several times a day, and none is left to become sour or dirty in the box.

Calves have been found to do well when alfalfa tea was gradually substituted for the milk, after the calves were several weeks old. In this case, however, the calves started to eat grain very early and apparently liked it. A little oil meal was added to each grain ration, when it was not fed in the milk. The ground feed should not be fed as a slop, but dry, and it should never be fed before giving the calf a drink because such a procedure is almost sure to cause bloat, due to the fact that when grain in the calf's stomach becomes wet it has a tendency to swell up. Feeding the grain, after the liquid part of the ration will lessen the danger of overeating, and consequent indigestion.

Handled in this way, if the calves are not allowed to get run down and out of condition the first few weeks, very fair success can be attained in growing them for dairy purposes. But, of course, they cannot be grown or fitted for veal or meat purposes with this feed. The main point in growing calves in this way is to keep a careful watch on the animals to see that they are healthy, and always give a little milk to the weak, puny individuals who show any tendency to scour.

It should be remembered that we can never duplicate nature, and the further we get from nature's methods, the less are our chances for success. Milk is the ideal food which nature intended for calves, and wherever possible it should continue to be the major part of their standard ration, either as whole or skim milk.

J. H. Murphy.

BEST METHOD OF PASTEURIZATION.

Milk can be pasteurized most efficiently in the bottles in which it is received. To do this a small tin pail with a perforated false bottom, such as shown in the illustration, can be used. If a special pail is not at hand, the same results can be secured by using an ordinary tin pail with an inverted pie tin placed in the bottom of same. This false bottom is

placed in the pail so as to permit circulation of water and prevent bumping of the bottles. An accurate thermometer should be placed in the water or in one of the bottles. Set the bottles of milk in the pail and fill with water nearly level with the milk in the bottles. Place the pail with the milk bottles on the stove and heat until the thermometer indicates a temperature of from 150 to 160 degrees F. The pail and bottles should then be removed from the stove and allowed to stand twenty-five minutes in the hot water. Now remove the cover and place the pail under a cold water faucet, allowing the water to run slowly into the pail. Continue until all the hot water has been replaced with the cold water and the temperature of the milk has been reduced to about that of the water. This is the cheapest and most efficient way of cooling and will also prevent breaking of bottles. The milk can then be conveyed to the refrigerator and placed on ice until required for use.—[Nebraska Bulletin.

SELECTING THE BULL CALF.

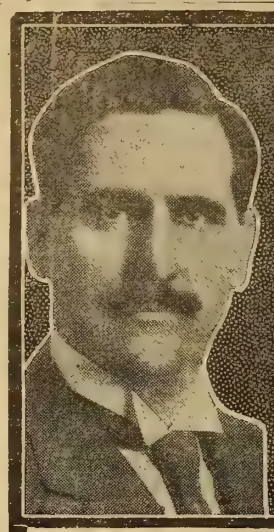
To the Editor of The Homestead:

I want first, at least two generations, four are better, of strong, vigorous ancestors backing the calf to be raised. If the calf to be raised is to be used to promote the best interests of dairying, its ancestry must have, in addition to size and vigor, a dairy performance that will warrant the trouble and expense of raising this calf properly, as its future usefulness depends largely on the manner in which the calf is cared for.

At birth the calf should be of medium size, vigorous, active and free from deformities, full, good-sized eyes, with clean-cut features, broad between the eyes, dished out in face below the eyes, broad muzzle, open nostrils, with eight well-developed milk teeth are good points. Rather straight and broad back, with well-sprung ribs, and well proportioned body with plenty of capacity are wanted.

Measurement through body, just back of front legs, should be good, as this is where the heart and lungs are located. They must have plenty of room to do their work if the calf is to prove a vigorous and prepotent animal; which, if he is not, he is a failure. I should like the calf to be a fair representative of his breed as to coloring and markings.

I will give some of my reasons for wanting certain points. Brightness, vigor and activity are the prime requisites for prepotency. Large,



90 Days Trial FREE!

The latest, greatest and absolutely the most wonderful product of my great factories — the superb 1913 Galloway Sanitary Separator — shipped right to your farm for 3 full months' trial — FREE!

I'm not even going to try to tell you about this separator—I can't find words to do it. Three years ago I called my factory superintendents, my inventors and my mechanical experts all together. I told them it was time for somebody to make a separator that would simply sweep the field on account of its overwhelming superiority over anything of the kind on the market, and that I intended to be that man. I said: "Now, boys, you've worked for Bill Galloway long enough to know that he won't take anybody's dust. You can have all the time and money you want for your experiments, but I expect you to make good."

Last August they told me my separator was ready. I took it out to my farm and tested it every way I knew how. I'll tell you, there isn't a single machine on the market that would stand up for one day under the tests to which I put this new Galloway Sanitary for week after week. I was so amazed, so thunderstruck by the results that I simply could not believe the evidence of my own eyes. I made up my mind right then that I would give every one of my farmer friends a chance to find out the truth about this separator the same way I did — by an actual three months' test right on their own farms, absolutely at my risk and expense!

I Challenge Every Manufacturer in the World to Meet Me on This Offer

I challenge any manufacturer or any dealer in the world to put a machine in your hands, regardless of price, for a fair test right alongside of the Galloway Sanitary. I'll even tell you how to make one test that no other manufacturer in the world has ever even dared to mention! **Take a batch of milk and skim half in the new Galloway Sanitary and half in any other machine on the market today. Then take the skim-milk from the Galloway and run it through the other machine and run the skim-milk from the other machine through the Galloway—AND WATCH THE CREAM SPOUTS!** You see the point—I don't need to explain—I'm just telling you one way to get the proof yourself.

And that's all I ask. I want you to see for yourself how the wonderful new Galloway Sanitary puts every other machine on the market just 20 years behind the times. I want you compare its simplicity, the amazing ease of operation, the handiness and the score of exclusive features of this wonder-working separator. See for yourself how the wildest claims of other manufacturers are fulfilled a hundred-fold in the machine Galloway sends you.

I'll Save You $25 to $50, Besides!

I'll tell you, frankly, this wonderful machine is my particular pet and pride, and I'm going to give you an extra big slice of the Galloway melon in its honor. I'll make you a price on this scientific marvel so low that no other separator in the country will even have a chance with you after you get my prices and terms. I'll guarantee—yes, guarantee—to save you $25 to $50 on the first cost alone, besides giving you a machine that's fully 20 years ahead of anything on the market today. Of course, this is an amazing offer — but it's my way of doing business. That's why 125,000 farmers, from one end of the country to the other, say

"The Only Way Is The Galloway"

Remember, this separator is made right in my own factory—every single piece—by the best and most experienced separator experts in the world and on the latest and most improved automatic and high-priced machines. I ship you this separator direct from my own factory. You don't pay a cent to any middleman or salesman. You buy at the actual factory cost with only one very small factory profit added. I take all the risk. I'll ship you a Galloway Sanitary, any size you may select, direct to your farm. Use it 30, 60 or 90 days. Then decide. If you can't honestly say that it's a better separator than you ever dreamed of owning, just ship it right back to me. I'll even pay all transportation charges, both ways, *so that you won't be out a single cent.*

Gear Driven Throughout

Gears running in a BATH OF OIL. The easiest running and most durable separator in the world.

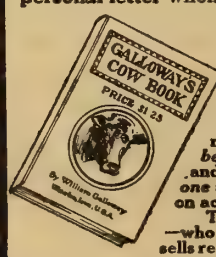
3 Months' Trial, Right On Your Own Farm, *FREE!*

$5,000 Challenge—$25,000 Guarantee!

You couldn't take any risk when you do business with me **even if you wanted to.** Every statement, every promise and every claim that I make **is backed by $5,000 in cold, hard cash.** Every customer is protected by a $25 000 guarantee of **ABSOLUTE SATISFACTION—and your word is always good with me.** You alone are the judge of the machine.

Get My Special 1913 Offer Sure

Here's the biggest and most startling proposition that I have ever been able to make. I have a proposition to offer you such as you nor anyone else ever heard of or even dreamed of before. **I'll tell you how you may get your Galloway Sanitary Separator or a Galloway Engine or Spreader either partly or entirely free.** I won't ask you to do any work or any canvassing, either. It's just a fair, square, co-operative proposition — that's all. I'll tell you all about it **in a personal letter** when you write me. WRITE TO ME NOW—TODAY.



COW BOOK FREE!

I want to send you a copy of my new Cow Book *absolutely free. There is positively nothing else like it in print.* It is the most complete and up-to-date manual of dairying for the farmer *that has ever been published.* All of the real, money-making facts—all of the *latest* methods and discoveries of the greatest dairy authorities of the world are condensed in this *one valuable volume.* There are no fancy theories—every single word is based on actual, practical experience. Everything is fully told in plain, clear English. There isn't a cow owner in the country—I don't care how successful he is—who can't *make more money* by following out the pointers in this book. It sells regularly for $1.25, *but I'll send it to you free and postpaid if you write me at once.* Besides, I will send you my handsome new Separator Catalog, just off the press, and full explanation of my 90-day Free Trial Offer and my 1913 Proposition. Now, don't wait a minute. *Don't let anything stop you.* Just get a pen or pencil and send me the coupon or a postal or letter for these free books and my offers NOW!

eyes, clean-cut features and good space between the ribs denote good nerve force, which every good dairy cow must have. Broad muzzle and open nostrils denote good lung power and appetite. The eight milk teeth are the ones on the front of the lower jaw, and, when well developed, denote vitality.

Four fair-sized, well-placed rudimentary teats ahead of the scrotum is considered a good dairy indication. The skin should be soft, mellow and oily with yellow color; the inside of the ear also, should be oily with rich yellow; this denotes quality in butter fat. Subscriber.

FLOOR FOR COW STABLE.

To the Editor of The Homestead:

In a recent issue of your paper I saw the request for something better than cement for floors for dairy and horse barns. After forty years' experience with all kinds of floors and bedding for stock we have fallen back to the earth floor. For best results we use a tough clay floor, well packed or beaten down with a maul or pestle and sloped back to the manure gutter for cows and to rear wall for horses. Our cows and all cattle like sawdust best for bedding. We learned this by having a saw mill near the barn and the dust was piled in a large heap nearby. Our cows would go to it and lie down and neighbor's cows would come for a mile to enjoy the dust pile. It can be put in the stalls from one to six inches deep, the deeper the better. In cleaning the stalls daily only a small amount of dust is removed at a time. If the dust goes with the manure to the field it will make clay land loose and pliable, but is inclined to sour it; however, it will produce the same results as chip dirt or leaves. The application of lime in some form will sweeten the land and should be used occasionally at any rate. Wheat straw is scarce and too valuable here in eastern Tennessee for bedding. Dry saw dust absorbs the liquid and will keep the floor dry.

Tennessee. H. L. Reynolds.

Among the curiosities of litigation may be cited the following case. On the boundary line of two farms in an Austrian village there grew a large gooseberry bush, from which the two farmers for years gathered the product. "What grows on my side is mine and you may have the rest," was the agreement. Some time ago the neighbors had a misunderstanding, and this came to a climax when the gooseberries became ripe. A lawsuit followed, and appeals were made to higher judicial bodies. The final decision was lately recorded in the Austrian courts. Each party is to have the right to pick the berries which grow on his side of the line, just as it was originally, but neither may destroy the bush. The costs are charged half to each litigant. Each farmer had to pay 225 krone. The yearly yield of the bush is worth about one-half krone, and the judge told the fighting farmers: "With good luck, it will take you only 800 years to make the bush pay. Take good care of it."

Although the register of production for Brown Swiss cattle has been established but a year, more than 100 cows and heifers of the breed are now being tested to determine their butter fat producing capabilities. The reports from these herds indicate that high averages will be made. The first twenty-one cows to be tested produced on the average 11,550.5 pounds of milk and 448.30 pounds of butter fat or 523 pounds of butter, and the average of the thirty-two cows and heifers of all ages was 10,860.7 pounds of milk and 429 pounds of butter fat.

How a small one-teacher school in the country may have all the conveniences popularly supposed to be the exclusive privilege of the city is demonstrated in the model rural school at Kirksville, Mo., according to H. W. Foght, specialist in rural education for the United States Bureau of Education. Indoor toilets and shower baths, drinking fountains, and a modern heating plant, are shown to be possible in the country school, however remote from the city. Furthermore, the cost is said to be within the means of a comparatively small community.

Big Ben

Big Ben—Two Good Alarms in One

Take your choice in Big Ben. He rings either way you wish — five straight minutes or every other half minute for all of ten minutes unless you switch him off. He's two alarms in one.

If you're a light sleeper, turn on the half minute taps before you go to bed. If you sleep heavily, set the five minute call. You can slumber then without the get-up worry on your mind.

When morning comes, and it's announced by Big Ben's jolly bell, you can't help getting up at once, for Big Ben never fails to get you wide awake.

Big Ben is really three good clocks in one, two excellent alarms and a fine time-keeper to keep in any room and tell time all day by.

If you have got to get up bright and early, if you have to get your help in the field on time, ask for Big Ben at your jeweler's and try him for a week. You'll never want to be without him afterwards.

Big Ben stands seven inches tall. He is triple nickel-plated and wears an inner vest of steel that insures him for life. His big, bold figures and hands are easy to read in the dim morning light. His large, comfortable keys almost wind themselves. He rings five minutes steadily or ten intermittently. If he is oiled every other year, there is no telling how long he will last.

He's sold by 18,000 watchmakers. His price is $2.50 anywhere in the States, $3 anywhere in Canada. If you can't find him at your jeweler's, a money order mailed to *Westclox, La Salle, Illinois*, will send him anywhere you say express prepaid.

Fine Prize Pony Given Away

You see in this picture a boy riding one of the splendid prize ponies I am going to give away. In other parts of the picture are the faces of several other boys. They are rather hard to find, but by turning the picture about you can see them. Mark at least two of the faces with a cross (X) and send the picture to me. Be sure to send your name and address so I can tell you all about the contest in which you can win a beautiful pony and many other prizes.

1500 Votes Free

I will send you a special coupon good for 1500 votes toward the pony. All you have to do to get this coupon is to send your name and address at once.

A. M. Piper, 600 Popular Bldg, Des Moines, Ia.

LIVE STOCK PHOTOGRAPHS

FOR use in sale catalogs, and for other advertising purposes, nothing equals engravings made from actual photographs. We have the most complete photographic equipment, as well as a photographer of superior ability in posing animals. We send him anywhere on request and quote prices as low as is consistent with good work. Let us send him to you before arranging your season's advertising. Address

POULTRY

THIS department is edited by a competent poultryman, who will be pleased to answer questions concerning diseases, poultry management, etc., when they can be answered through the department. Questions will not, however, as a rule, be answered by mail, and stamps need not, therefore, be inclosed with inquiries. Address all letters relating to poultry topics to this office.

MATING BARRED ROCKS.

An inquirer who is a reader of this paper of Phillips, Wisconsin, writes:

Could you give us a description of a good Barred Rock hen? About their legs—should they be yellow? Do their beaks run darker than the males? We have one pullet that is beautiful; fresh, bright plumage, yellow legs and beak, while "feminine" is written all over her.

It is one thing to recognize a good Barred Rock, and wholly another affair to mate them so as to produce standard birds. Twenty-five years ago I knew all there was to learn and began to mate up pens of different breeds. Today, I know only a very small part of one-half of the business of mating Barred Rocks for good results.

The production of Barred Rocks is divided into two distinct parts, which is called a double mating. One pen to produce standard colored pullets, the other to produce standard colored cockerels. A poultry man who was somewhat of a dreamer, scoffed at the idea of a double mating of fowls. "The quail and prairie chickens do not use a double mating system and they breed true to color."

All wild birds do breed true to color, that is a fact, but God made the birds and man was instrumental in producing Barred Rocks, so, of course, there is more or less of mess made of it. This breed was produced from several other breeds, and so, of course, they will degenerate and run back, ativism it is called. In Barred Rock matings the cockerels invariably run lighter than the pullets, yet the standard requires uniformity of color in the sexes.

The cause of this was discovered by W. J. Spillman, of the department of agriculture. The male of this breed transmits barring to both male and female of his descendants, while the female transmits barring to her male descendants only. This peculiarity naturally causes the males to run lighter than the females.

To produce standard colored cockerels it is necessary to use a male of standard color and a female several shades darker. The barring of the female should be sharp and distinct. From long and careful study of this breed, I find that the pullets are prone to run too dark towards the head, while the cockerels invariably tend to a lighter color towards the head. To counteract this tendency, I always choose females that are very clearly and distinctly barred to the eyes, with no sign of smut, and the cockerels must show good neck and head barring and if a fault there must be, it must be in some other section. This fact is worthy of note.

To produce standard colored pullets requires a male very light in color, so light in fact, that the novice would look at him with suspicion. His mate should be standard in color and very distinctly barred to the skin, as should all Barred Rocks for that matter.

The stock should be perfect in comb, possess a bright bay or red eye, bright yellow shanks in all pullet breeders and the cockerel bred males. The pullets should have that distinct "feminine" appearance and for best results at filling the egg basket should not be crowded above standard weight. Other things being equal, the females from a pullet mating are the better egg producers. They are bred that way and built that way. The females from a cockerel mating run so dark that some spots will be in evidence in beak and shank, if, however, care is used year after year, and the best marked females only used for the breeding pens, this objectional feature can be almost eliminated.

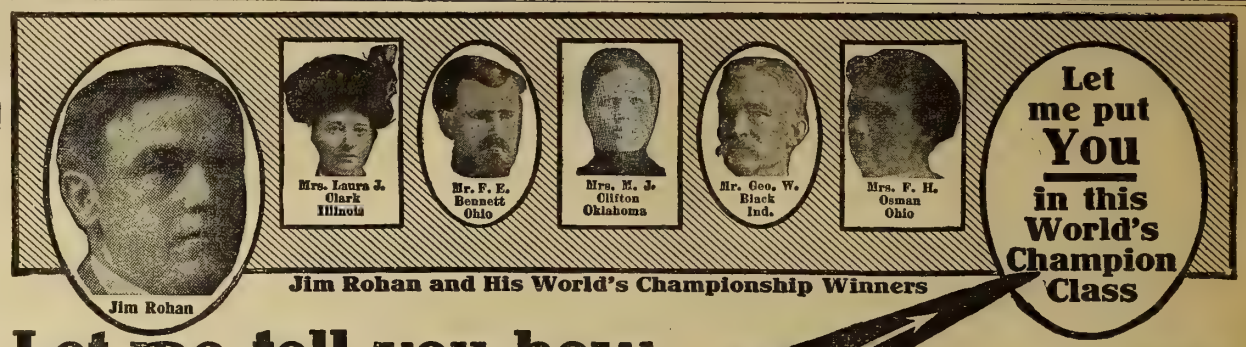
For a common farm flock, one mating is enough, and it depends on how you wish to dispose of them which is better. If one desires to raise cockerels to sell to head pure-bred flocks the cockerel mating is preferable. Less than 5 per cent of our customers ask for pullet mated birds. If you wish to raise wholly for your own use, with possibly a few surplus cockerels to sell on the market, the pullet mating would be better. They are rarely excelled as layers and I know of no prettier sight in the fowl kingdom than a flock of standard Barred Rock pullets that have just attained maturity.

MANAGEMENT OF LAYING DUCKS

To the Editor of The Homestead:

As a general rule, ducks lay their eggs from January to the last of June, missing but a few days during this period. They demand good care, however, at all times during the laying season if the maximum number of eggs are desired. Dry quarters are very essential for one thing. The duck quarters need never be an expensive building, but it must be kept perfectly dry inside at all times. The roof should be water tight and the floor must be such as will not become damp during wet weather. A plank floor raised several inches from the ground is always the most satisfactory. Keep several inches of straw or litter on the floor constantly, putting down a fresh supply at least twice a week. An abundance of bedding insures comfort for the ducks and it prevents broken eggs, as the birds drop their eggs on the floor. The duck house requires no furnishings in the way of perches or nest boxes.

The laying ducks require good feeding, but one must be careful not to overfeed. A fat duck is a poor layer, and a fat drake is unsafe as a breeder. Feed for eggs and not for fat. Three feeds a day of ground grains and cooked vegetables may safely be given until the arrival of grass and insects, when one feed a day will be sufficient. Until the arrival of grass



Jim Rohan and His World's Championship Winners

Let me tell you how these champions hatched 140 Chicks From 140 Eggs

I Want Your Photo Here

Here's plain common sense: You want an incubator that will **hatch every fertile egg.** And you want a Brooder that will **raise every chick,** if such machines are built. You are going to buy the incubator that you believe is **better than all others.** That is plain good judgment. Good incubators cost so little and last so long that you can't afford not to get the best!

Now here's **my** proposition: I want to give you **facts** and **proof!** I don't want to take up your time here with **empty arguments.** You haven't time now for dilly-dallying. The time is now here when you must **get busy** with your **hatching.** You want an **early** hatch. You can't afford to lose time **experimenting.**

Follow the lead of Uncle Sam. **The U.S. Government is among my 201,840 customers!** Surely the machine good enough for Uncle Sam is good enough to make money for **you!** I want to send you the **proof** that my **Belle City** Incubator is the **best.** I want to give you the **proof** that it **has produced a chick for every egg**—not luck shots, but **time after time!** I want to **prove** to you that all of these World's Championship winners and **thousands of others** are getting **100 per cent hatches** with the **Belle City** Incubator.

I want to send you the most remarkable **incubator and brooder news ever published.** I want to send you all the facts about my six-time World's Champion Belle City Incubator. I want to show **you** how to get into the World's Champion Hatching Class. I want to tell you how to make the **most profit** out of poultry **right from the start** and at the **least possible cost.** Let me tell you how my

This is the Tycos Cup won by my **Belle City** Incubator in the World's Championship Contest for best hatches, beating incubators costing 2 to 5 times more.

You can get record hatches too—just as easily as these World's Champions. I will show you how.

I want to tell you how I give you **1, 2 or 3 months test** right in your own home, and my liberal, **personal 10-year guarantee** and **money-back offer.** Won't you write me now? Just mail me a postal and I'll send all this information and more, absolutely free.

World's Champion Belle City Incubator

is made—how they are different from all others, how I have embodied in them everything worth having **in** and **on** an incubator—the features that have made the Belle City the **6-time World's Championship Winner!**

My **140**-Egg World's Championship Belle City Incubator has Oakes double disc self-regulator, correct hot water heating system, copper tank and boiler, safety lamp, double walls and double door, with dead air space all over, with roomy nursery and strong egg tray. Of course, the thermometer is right; I use the "Tycos." I also supply egg-tester, Edw. Miller sun hinge burner, funnel, everything you need including **valuable instruction book** on operation, hatching and care of chicks.

And I want to tell you all about my famous **140**-Chick Belle City brooder—the only double walled, hot water, top heat brooder made, **guaranteed** to raise largest percentage of chicks every time—a fitting companion to my **World's Championship** Belle City Incubator.

My Price Sensation

You may wonder at the remarkably **low price** at which I sell my machines **direct** from **factory.** I want to tell you how I send them all **freight prepaid** east of the Rockies and freight allowed that far on shipments beyond.

Just Drop Me a Postal—Now!

I will send you by **return mail** the **proof** that my **World's Champion Belle City** is the Incubator that will pay you the **handsomest** returns!

If you're in a hurry—if you don't want to wait for all this proof, you can order direct from this advertisement. I tell you how my machines are made, and give you my **money-back guarantee.** The editor of this paper, or any bank or express company will tell you your money is perfectly safe and I'll do just as I say I will. I ask you to send only **$7.55** for my **140-egg, 6-time** World's Champion Belle City Incubator—the best you can buy at **any** price, or **$4.85** for the **140-chick Belle City brooder.** You can order both together if you wish, and **save more money** at my unheard-of **low combination price**—send only **$11.50** when both are ordered together.

Don't turn this page without either writing to me or else tearing out this corner as a reminder. Whether you order or not you get all my valuable World's Championship hatching facts **absolutely free!** But be sure to **write me today.** Just say, "Send World's Championship Hatching Facts," or order **now** and save delay. I guarantee to ship machines same day your order is received. **Satisfaction guaranteed.** Address Jim Rohan, President,

Belle City Incubator Company, Box 52 Racine, Wis.

the layers may be given about all they will eat as long as an abundance of grit is supplied. Don't make the feed sloppy; just moist enough to cling together well. Some green food is necessary for ducks the year around and it should be provided at least once a day at this season. Give grit separate from the food, for when the two are mixed the fowls may be forced to eat more grit than they require. Drinking water should always be kept near the feed troughs.

Five ducks may safely be allowed to each drake. The first two dozen eggs are seldom fertile but afterwards the fertility runs higher than in hen eggs until June, when the eggs are no longer safe for incubation. It is best to keep the layers fastened in their quarters each morning until nine o'clock in order that the eggs may be deposited there, after which the fowls may be given their liberty for the remainder of the day. On cold mornings the eggs should be gathered as soon as laid, as chilled eggs will not hatch. If the eggs are not placed at once for hatching they should be carefully wrapped in paper and kept in a dry room having a temperature between 50 and 60 degrees. But the sooner the eggs are set after being laid the better they will hatch. They are not very reliable after they are a week old.

The breeding ducks should not be picked during the laying season if eggs are wanted, as the fowls cannot produce eggs and feathers at the same time. W. F. Purdue.

WHEN HENS STEAL THEIR NESTS.

To the Editor of The Homestead:

When a hen makes her own nest in the fields she usually chooses a hedge row, and it is curious that she generally prefers the side nearest the ditch, and not the middle of the hedge, as one might suppose. If the nest is undiscovered she will probably lay fifteen eggs before becoming broody, which means that she must be three weeks, or nearly so, in doing it. Yet the eggs all hatch out on the same day. If we set eggs varying from one day to three weeks old, there will be twenty-four hours difference in time of hatching the stale and the new laid. I think this is accounted for by the hen staying on the nest while she lays sufficiently long to slightly warm up the whole, and to give a revivifying influence to the germ. I have never tried warming eggs that I was keeping for setting, but it probably would enable them to be kept longer.

Hens will sometimes choose very curious places about a farmstead, and I once found one sitting on a boarded floor in a loft with two eggs under her and no nest at all. Left alone she hatched one chicken. It is also curious that when a hen steals her nest she never lays more eggs than she can cover before becoming broody—at least I have never known one to do so. It would seem that the accumulation of eggs in a nest, and the constant sight of them, brings on broodiness. It is a fact that hens go broody more quickly where eggs are collected badly, or when they are in breeding pens in the presence of a cock. On a poultry farm where we never dream of keeping a cock except in a breeding pen, we have plenty of opportunity for noticing this. Subscriber.

To Prevent White Diarrhoea.

Dear Sir:—I was losing my young chicks last year by the dozen, when I noticed Walker's Walko Remedy, recommended by a lady. I sent (M. O.) for two 50-cent packages to the Walker Remedy Co., U. 12, Lamoni, Iowa, and can say that it not only cured all the sick ones, but checked and stopped the disease, White Diarrhoea; and I had fine luck with my later hatchings—raised practically all of them.

Mrs. C. C. Jones, Blackwater, Mo—Adv.

NEWS OF THE SALE RING.

The Miller & Herr Duroc Sale.

Everybody was pleased with the fine offering, old and new breeders, and Miller & Herr were pleased with the large attendance and the prices their animals brought. Sows bred to Helen's Chief, their herd boar, were especially sought after. Col. C. C. Boyd, Centralia, Mo., topped the sale on No. 32, a grand individual by the great Fancy Col.; then, to add to that, she was bred to Helen's Chief for a March litter. Duroc men of the western shows should look out for her. Cols. Fred Reppert, Igleheart and Irwin done the selling in tip-top shape. Below is a list of buyers and prices:

The Sprague and Grant Duroc Sale.

Much credit is due Mr. Sprague and Dan Grant for the excellent offering they put up. They were a nice, even lot throughout. Sows bred to the noted boars, Cherry Col. and Jack's Friend, were in good demand. Some most excellent sows were also sold by these boars and good values were received for them. This sale sure indicates a most healthy condition of the Duroc business, as the offering were all sold on their merit and breeding and no high tops were reached. The sale made the highest average of the week of th Ohio sales. When Homestead readers need good Durocs they should look up the advertisement of Mr. Sprague elsewhere in this paper. Colonels Igleheart, Reppert and Irwin did the selling in a most satisfactory manner. Below is a list of buyers and prices:

1.	L. E. Kohli, New Paris, Ind	$156

Ironclad TRADE MARK
Wins in the Two BIGGEST HATCHING Contests Ever Held

Why take chances with untried machines when for only $10 we guarantee to deliver safely, all freight charges paid (East of Rockies) BOTH of these big prize winning machines fully equipped, set up ready for use? Why not own an Ironclad—the only incubator that has for two years in succession (1911 and 1912) won in the greatest hatching contests ever held. In the 1912 contest conducted by Missouri Valley Farmer and Nebraska Farm Journal, 2000 machines were entered including practically every make, style and price. With 140 egg Ironclad—the same machine we offer with Brooder, freight paid for only $10. Mrs. C. P. Merrick, Lockney, Texas hatched 148 chicks from 148 eggs in 1912 contest

140-EGG Ironclad Incubator
Don't class this big, all metal covered, dependable hatcher with cheaply constructed machines—and don't buy any incubator until you know what it is made of. Note these Ironclad specifications. Genuine California Redwood, triple walls, asbestos lining, galvanized iron covering. Large egg tray, extra deep chick nursery—hot water top heat, copper tanks and boiler, self regulator, Tycos Thermometer, glass in door and many other special advantages fully explained in Free Catalog. Write for it TODAY or order direct from this adv.

THE X-RAY

Bigger Hatches With Only 1 Gal. Oil To Hatch—One Filling of Lamp!—

Get our new Free Book No. 41 on X-Ray Incubators and Brooders. Shipped direct from factory to you. No agents—no dealers. Guaranteed to please. Freight prepaid anywhere! The X-Ray is the one incubator today that's built on the right principle with the lamp underneath, in the center, and not on the side. This means perfect distribution of heat in the egg-chamber and no outside cold. We use a large oil tank holding four to eight quarts of oil—making only one filling of the lamp, but just four quarts are all that's needed for hatch. Old style machines have to be filled every day. The X-Ray saves both work and money! Heat is regulated by our patented automatic trip which cuts down flame at burner when egg chamber gets too hot—this is a big saving of oil. The ever successful

X-RAY INCUBATOR

has other exclusive and proven features that you will like. It opens from the top—has *two* double glass panels so you can see the thermometer at any time without letting in outside air on eggs. Ventilate or turn eggs by simply raising the lid. There are no sliding heavy drawers to break the eggs. X-Ray is heated to hatching temperature in just 15 minutes—others take 4 to 8 hours because of their *old style* principle. X-Ray is made of all genuine California redwood, covered completely with enameled steel, beautiful rosewood finish, legs galvanized, strongly braced. Every X-Ray incubator fully guaranteed. X-Ray results are the *biggest* results.

Write Today For Free Book No. 41

Learn *all* about X-Ray construction—why X-Ray is entirely different and wonderfully better than any other. Read why women and all mere beginners have such *big* success *every time with the X-Ray!* Write today—this is very important news—*worth money!*

Fifty head averaged $75.

The McClarnon Poland Sale.

The sale of Poland China brood sows made by R. L. McClarnon at Braddyville, Iowa, on the evening of February 26th, was well attended again this year and he sold forty head at an average of $75.70, the top being No. 33, that went to Robert I. Young at $145. No high prices prevailed, but it was an unusually even sale from beginning to end. H. S. Duncan was the auctioneer. Below we list the entire offering:

Duerr's Duroc Jersey Sale.

The sale of Duroc Jerseys that was held by A. J. Duerr, Milford, Neb., on January 28th, was well attended by breeders, but the cold, stormy day kept many of the local farmer buyers away. However, the forty head sold in short time and at fair prices. The offering really merited more money, but they made Mr. Duerr a profit at the price and they were certainly good bargains for the buyers. Colonels Page and Thompson did the selling and the ones that sold for $35 or more are listed:

H. H. Koenig, DeWitt, Neb.	$57.50
H. O. Harney, Aurora, Neb.	50.00
John Kahre, Dorchester, Neb.	37.00
Amos Eigsti, Milford, Neb.	52.00
George Davis & Son, Milford, Neb.	35.00
Hans H. Jessen, Dannebrog, Neb.	44.00

R. D. Morrisy, Dorchester, Neb.	40.00
Ben Mooberry, Dorchester, Neb.	38.00
U. G. Nantkes, Bellwood, Neb.	39.00
Ben Mooberry	38.00
U. G. Nantkes	40.00
Wm. Severns, Tamora, Neb.	40.00
John Porterfield, Heartwell, Neb.	40.00
Geo. Davis & Son	44.00
Wm. Runty, Milford, Neb.	35.00
Ben Mooberry	36.00

POINTERS.

—Miss Edith Young, Huntertown, Ind., is offering Pekin ducks for sale in her advertisement found elsewhere in this department.

—Mrs. Anna N. Brodahl, Wahoo, Neb., has an advertisement elsewhere in this department of The Homestead offering Single Comb Rhode Island Red eggs for sale.

"My pens are now all mated ready for the egg trade," writes L. G. Johnson, Steamboat Rock, Iowa, in furnishing copy for his Single Comb Rhode Island Red advertisement that appears elsewhere in this department. "My birds have that fine shade of red so much sought for. They have been winning at every show where I have exhibited. I am in a position to give customers big value at prices within their means. I can fill orders for one sitting or in lots of 100 or more. My mating list will be sent to parties interested in purchasing, but not to those simply curious."

—Mrs. T. W. Glass, Sac City, Iowa, has White Wyandotte eggs for sale, prices on which are named in her advertisement elsewhere in this department.

—Rose Comb Rhode Island Red eggs by the hundred are priced in the advertisement of Emma Curts, Lawrence, Neb., that appears elsewhere in this department.

—Single Comb White Leghorn eggs are offered for sale in the advertisement of the Eggland Farm, Mt. Vernon, Iowa, appearing elsewhere in this department.

—Mrs. George W. Godlove, Riverside, Iowa, is offering Single Comb Rhode Island Red eggs for sale in her advertisement appearing elsewhere in this department.

—Elsewhere in this department of The Homestead will be found the advertisement of A. E. Goodman, Indianola, Ia., quoting prices on Single Comb White Orpington eggs.

—M. E. La Shome, Epworth, Iowa, is prepared to furnish readers of The Homestead with high-scoring Single Comb White Leghorn baby chicks. The advertisement appears elsewhere in this issue.

—Prices on Barred Plymouth Rock, Single Comb Rhode Island Red and Pekin duck eggs are stated in the advertisement of Mrs. C. A. Geisz, Carroll, Ill., that appears elsewhere in this department.

—Eggs from Barred Plymouth Rocks of the Thompson, Felch, Hawkins and Bradley strains, also blue ribbon winners in 1912, are advertised for sale by Mrs. Minnie Lenker, Wilton Junction, Iowa, in her advertisement appearing elsewhere in this issue.

—"Our Barred Plymouth Rocks," writes the Hawkeye Poultry Yards, Mt. Pleasant, Iowa, in furnishing copy for advertisement found elsewhere in this department, "are nice, large birds and well barred. We guarantee a good hatch; can only spare a few sittings."

—Norris & Norris, breeders of Single Comb Buff Leghorn chickens, Grinnell, Iowa, has an advertisement elsewhere in this department offering eggs for sale. They write: "We showed some birds of our own breeding at the Des Moines show, January, 1912, and took first and second on hen, fourth and fifth on pullet and second on young pen. We secured a ribbon on every bird we entered, and many of the birds are retained in our breeding pen this year. We will send mating list free on request."

—Ammy Bartow, Lynnville, Iowa, has an advertisement elsewhere in this department offering Barred Plymouth Rock eggs for sale. In furnishing copy she writes: "I have as fine a flock of breeders as there is in the state. Come and visit my yards and be convinced. My prices are low for the stock I handle. I have spared neither time nor money in building up my flock. Now is the time to take advantage of these prices. Eggs from my stock produced

Uncle Sam's Poultry Book

is the greatest chicken book printed. None other like it. Written by the government experts, and gives all the secrets of the business they have learned from years of experience. Tells all you want to know about the practical poultry business. It's only 20 cents, but worth $10.00 to anybody. By our plan you can get 50 cents back. Send today 2 dimes, or 10 2-cent stamps. Use this great book with the world-famed and unequaled hatcher, that never fails, the

SURE HATCH INCUBATOR

and you will have better luck with your chickens, raise more of your hatches, get more eggs and insure greater profits than by any other course you can pursue. The **Sure Hatch** is the best built machine on the market selling for a low price. It is the only machine made **exactly** after the style recommended in the government reports. It hatches chicks that live. **FULLY GUARANTEED FIVE YEARS.** Send for our big free catalog and put your chickens into market as soon as you can and get the big prices. You will be delighted with the Uncle Sam's Poultry Book and our plan of giving back more than you paid for it. Get our liberal proposition.

W. H. TOMS $4.00 each, weight 22 and 23 lbs A few choice Pekin drakes $1.60 each. Address Mrs. H. A. Wohlsdorf, Lawler, Ia.

show winners in 1912 and I expect as good or better this year. Write for circulars."

—L. S. Fisher & Sons, Edgewood, Ia., have a few choice big-type Poland China gilts for sale. They are bred to F.'s Longfellow for March and April farrow and will be shipped on approval, express prepaid. The advertisement appears elsewhere in this issue.

—J. B. Heisel, Grinnell, Iowa, has a new advertisement in this issue for eggs from his fine flock of exclusive Rose Comb Rhode Island Reds. He has a number of prize winners heading these pens and you will receive your money's worth from him. Write him, mentioning The Homestead.

—Miss Jennie Rider, Farmington, Ia., has an advertisement in this department of The Homestead offering Indian Runner duck eggs for sale. She will guarantee them to be pure white in color. She reports that she had splendid luck in selling ducks and could have sold fifty more if she had had them.

—Grant Lynn, Spirit Lake, Ia., whose new advertisement appears elsewhere in this department, writes: "The eggs I am offering for sale are from nicely barred, large-boned Plymouth Rock stock of the Thompson Ringlet strain." For further information address Mr. Lynn, mentioning The Homestead.

—G. J. Pfeil, Central City, Iowa, a breeder of pure-bred Barred Plymouth Rocks for the past fifteen years, has an exceptionally fine lot this season, good layers and barred to the skin. The prices at which he will furnish cockerels and eggs will be found in his advertisement elsewhere in this issue.

—The Evergreen Poultry Yards, Waterloo, Iowa, write: "The Mottled Ancona cockerels we are offering for sale are extra choice birds and are from our heavy laying strain of large white eggs. They are closely related to our Chicago and Waterloo prize winners." See advertisement elsewhere in this department.

—Hal E. Rogers, Luverne, Iowa, in furnishing copy for his advertisement offering Rhode Island Red eggs for sale, found elsewhere in this department, writes: "At the head of pen No. 1 I have a fine cockerel from the Buschmann-Pierce Red Farms, mated with the best of my pullets, while at the head of pen No. 2 I have a large bird of my own raising."

—James H. Howorth, Moulton, Iowa, writes: "We have been breeding Barred Plymouth Rocks since 1880. Our flock is a fine one, of more than standard weight, with fine, narrow barring clear to the skin, and are good layers that will please anyone in practical utility. They are not only good lookers, but they pay in the egg basket." See advertisement elsewhere in this department.

—R. E. Colburn, Weyauwega, Wis., whose advertisement offering Single Comb Buff Leghorn eggs for sale appears elsewhere in this department, writes: "Our stock, scoring from 92 to 93¼, took first, second and third over all competition at the Waupaca County Fair. They are heavy layers of big, white eggs. Our May hatched pullets began laying in November and kept busy all winter."

—Mrs. Eva Girard, Schleswig, Ia., has forty big-boned Barred Plymouth Rock cockerels which she is closing out at low prices as per advertisement appearing elsewhere in this department. Mrs. Girard has bred Barred Plymouth Rocks for twenty years and has won prizes at Odebolt, Denison and Schleswig. Prices quoted on these cockerels she considers low in order to make room for her breeding pens. She will be able to furnish eggs in season.

—J. W. Robinson, Truro, Iowa, breeder of Single Comb White Leghorns, whose advertisement offering eggs for sale appears elsewhere in this department, writes: "My Leghorns have the run of the farm; they are healthy and are laying like slot machines. It is the quality of my birds and eggs that is high, not the price. If you want Leghorn eggs give me a trial order. I guarantee good, fertile eggs. Will be well packed and delivered to the express company in good shape. Write me your wants." When writing please mention The Homestead.

—F. Fortmann, Dyersville, Ia., whose advertisement offering Single Comb White Orpington eggs for sale appears elsewhere in this department, writes that he has a few good cockerels left; also that he has ten grand matings for the season's egg trade. Mr. Fortmann's winnings were first and special best-shaped cockerel at Aurora Fair and Poultry Show, and grand sweepstakes hen; also first on pen. At Epworth, Ia., he won first on cockerel, first on hen, first on pullet; also best pen and the handsome club ribbons of the American White Orpington Club and the beautiful club medal for best pen. At Dubuque he won first on display pen. All these winners are in his show matings. Mr. Fortmann wishes success to all his friends and customers.

—The advertisement of Ben Bradshaw, Truro, Iowa, offering Single Comb Buff Orpington eggs, appears elsewhere in this department. In furnishing copy Mr. Bradshaw writes: "My birds are farm raised and are free from disease. My Buffs are very even in color and are good egg machines. Pen No. 1 is headed by a ten-pound cockerel mated to twelve good hens and pullets; pen No. 2 is headed by a nine and one-half-pound cockerel that is a good one, mated to twelve hens and pullets that are good for the money that I ask for the eggs. My range flock is headed by cockerels running in weight from nine to ten pounds apiece. If you are looking for something good in the egg line I have them. Thanking all who got eggs and birds from me last season,

RHODE ISLAND REDS.

The Homestead is a good paper in which to advertise."

—Geo. Gaul, Tipton, Iowa, advertises Single Comb White Leghorn eggs from a well-established strain and one fancy imported pen in his advertisement appearing elsewhere in this issue.

—Buff Orpington eggs from prize-winning stock and some good cockerels are offered for sale by H. Cavell, Haverhill, Iowa, in his advertisement appearing elsewhere in this department.

—Eggs from prize-winning White Wyandottes of a good laying strain are advertised for sale in the advertisement of E. G. Pont, Atlantic, Iowa, that appears elsewhere in this department.

—Toulouse geese eggs from large-framed birds are offered for sale by Frank A. Gould, Rockwell City, Iowa, in his advertisement appearing elsewhere in this department. Under the Buff Wyandotte head Mr. Gould is also offering eggs for sale from good stock having farm range.

—J. M. Reeder, Earlville, Iowa, breeder of Barred Plymouth Rocks, in furnishing copy for advertisement found elsewhere in this department, writes: "I have an extra choice lot of Barred Rock hens and pullets this year, mated with the best cockerels I ever owned. They are all good in color, shape and size. Kindly get your order booked a few days before you wish eggs shipped. In so doing you will get eggs when wanted."

—Mrs. E. C. Turner, Griswold, Iowa, in furnishing copy for her new advertisement appearing elsewhere in this department, writes: "Our White Plymouth Rocks are in good condition; if any difference, they are better than heretofore, not any brass in plumage, pure white, bay eyes, yellow legs and feet, score 92½ to 95½. They are of the Fishel strain and this year's flocks are headed with cockerels from one of Fishel's $25 pens."

—Mrs. James Pedley, Britt, Iowa, writes that her White Plymouth Rocks are in good condition, hens weighing up to eight pounds, cockerels up to ten pounds and score from 92 to 95¼. Some are very fine birds and a great many of them prize winners, she having won first and second wherever shown. Mrs. Pedley has raised White Plymouth Rocks exclusively for the past fifteen years. Her advertisement appears elsewhere in this department.

—L. C. Crum, Red Oak, Iowa, in furnishing copy for his advertisement offering Buff Plymouth Rock eggs for sale, found elsewhere in this department, writes: "I feel that I am offering the public that which I can justly be proud of. We have been breeding Buff Plymouth Rocks for three years and have taken great pains to make them good. We had them scored this year by A. L. Houston and received some very encouraging compliments from him."

—Ben Bradshaw, Truro, Iowa, writes: "My Single Comb Buff Orpingtons are farm raised and free from disease; they are very even in coloring and are good egg producers. My pen No. 1 is headed by a ten-pound cockerel, mated to twelve hens and pullets; pen No. 2 is headed by a nine and one-half-pound cockerel also mated to twelve hens and pullets. My range flock is headed by cockerels weighing nine to ten pounds." Read advertisement found elsewhere in this department.

—Eli F. Hersey, Parkersburg, Iowa, a life member of the American Poultry Association, is making a very moderate price on eggs by the sitting or by the hundred, in his advertisement that appears elsewhere in this department. The varieties from which he can supply his customers are Single Comb Brown Leghorns, Rose Comb Brown Leghorns, Single Comb Rhode Island Reds, Barred Plymouth Rocks and Pekin ducks. Winners at Chicago, New York, Kansas City, St. Paul and Iowa shows are in his yards. Catalog will be sent for the asking.

—William Kerr, Winthrop, Iowa, is a breeder of Thompson Ringlets, Bradley and Latham strains of Barred Plymouth Rocks; he has both pullet and cockerel mating pens this season containing high-scoring stock. His range flock consists of Thompson Ringlets headed by pure Thompson cockerels scoring 90 to 91, a number of the hens in this flock scoring 90. His stock is closely related to Chicago, Boston and New York prize winners. Anyone wanting Barred Plymouth Rock eggs should read the advertisement naming prices that appears elsewhere in this department.

—Mrs. John E. Griffith, Washington, Iowa, whose advertisement offering Dark Cornish eggs for sale, appears elsewhere in this department, writes: "I have had more demand for Dark Cornish fowls this season than I could supply. My flock was never in better condition to furnish eggs for hatching than this spring. I have new birds to head all my pens and I expect the best of results. Egg inquiries are coming in most every mail and I have booked a number of orders. The best of care is taken to prepare the eggs for shipment and sittings are sent in Erie shipping cases."

Geo. S. Phillips, Tecumseh, Neb., is offering just now eggs for hatching from his noted flock of Single Comb White Leghorns at the very low prices of $1.50 for fifteen or $5 per 100. When one takes into consideration that Mr. Phillips has been breeding choice Leghorns for twenty-four years and that his fowls have always made good, either in the breeding pen or in the shows, and that the stock from which these eggs are now for sale are of the very purest white and that they are large, well-balanced birds, it will then be apparent that he is indeed offering a lot of real bargains at the prices asked for these eggs. Order today if you want something choice and that is true to type and name. Mention this paper

—The advertisement of Mrs. S. J. Philson, Harlan, Iowa, offering Single Comb White Leghorn eggs for sale, appears elsewhere in this department.

Ancona Cockerels $2 to $5. Chicks and eggs in season. Send stamp for folder. Order early. Geo. W. Harris, R. 3, Shelby, Ohio.

Baby Chicks 4 varieties, all pure bred stock. Price 8c to 11c each. Catalog free. 20th Century Hatchery, Dept. A, Chatfield, Ohio.

FOR SALE Toulouse goose eggs at 20 cents each. Good marked birds. Address A. B. Summerville, Monroe, Iowa

Interstate Farmers' and Breeders' Association.

THE farmers of the region of which Sioux City, Iowa, is the center have in the Interstate Farmers' and Breeders' Association one of the live organizations of the whole corn belt. In the eleventh annual meeting of the association held in the parlors of the new Martin hotel at Sioux City on February 27th and 28th this year, the attendance was about double that of a year ago, and this in spite of the fact that the session was held during a hard time of the year for many farmers to get away. The entire list of officers who worked up the program and the entertainment are entitled to much credit for their efforts. A new feature of the meetings is the women's section which holds sessions at the same time as the men. The new officers for the coming year are: President, B. F. Stoddard, of Sloan; vice-president, E. M. Casady, of Whiting; secretary, Joe Morton, of Sioux City, and John Thompson, of Sioux City, treasurer. Directors elected were: H. M. Corwin, of Rock Valley; C. H. Babcock, of Moville; E. B. Carter, of Sergeant Bluff; W. S. A. Smith, of Sioux City; C. W. Maynard, of Elk Point, S. D.; W. B. Whiting, of Whiting, Iowa; W. H. Benn, of Sioux City; Frank Drulley, of Yankton, S. D., and Daniel Hartnett, of Hubbard, Neb. Friday evening the meetings were closed with a banquet in the hotel banquet room which was attended by 300 people including the members of the associatically no more tillable land remaining of Sioux City.

"The farm tenant system in the United States has been a greater menace to the country than war, famine and pestilence," said Prof. W. J. Kennedy in discussing that subject. It encourages soil robbing, prevents good schools, good rural churches, the building of good roads and interferes with good home life. The production of the farms in the United States is fast becoming lower than the demand of the country's population and since there is practical no more tillable land remaining that is not already being farmed, this demand must be met not by farming more acres, but making each acre produce more. The tenant farmer cannot work as efficiently under the present system as he could under other conditions, because of the prevalence of the short-lease system. He loses 25 to 50 per cent of his efficiency because he lacks comfortable homes, has not sufficient live stock nor proper farm machinery, he cannot have the proper buildings, not one tenant farm in five is properly fenced and the tenant is not able to command sufficient credit or bank capital. The result is that instead of farming the land he mines the soil. Instead of continuing under the present short-time leases of a year or so, the long-term leases that prevail in England and Scotland were recommended as means of improvement. The following suggestions of methods to improve were given: First, long leases with renewal options, mentioning prominently the ten, fifteen and seventeen-year contracts of Great Britain; second, cash rentals as a means of taking farmers away from the grain farming idea; third, better equipment in buildings and fences; fourth, credit system enabling renters to borrow at as low rates of interest as owners; fifth, government aid similar to that of Ireland and Denmark, enabling farmers to buy land on long-term contracts at low rates of interest.

Fall wheat as a principal crop is fast attaining prominence in the region from which members of this association come. It has been successfully raised by Bert Stoddard, of Sloan, who in a paper "Why and How to Grow Winter Wheat" related his experiences with the crop as grown on a large scale. His principal reason why winter wheat should be grown was the profit to be obtained. Crops in Woodbury county have made from fifteen to forty bushels per acre and the returns from marketing have shown it to be profitable. There is more profit in this crop than other small grain crops sown in the rotation commonly followed; it aids more than these other crops in ridding the land of foul weeds, as it starts early, choking the weeds down and its early maturing and early harvest time gives a chance to plow the land early in the summer when the weeds are most easily killed. Mr. Stoddard told of a field badly infested with milkweeds that was cleared by the tillage necessary for this crop. It is far ahead of spring wheat as a crop in this section and has winter-killed but once in Mr. Stoddard's ten years of ex-

Shallow Men Believe in Luck—Deep Men Believe in Cause and Effect

THE CAUSE—

The Spalding Deep Tilling Machine is built especially for deep and thorough tilling of the soil. It is guaranteed to do the work exactly as represented in our catalog.

We told the editor of The Iowa Homestead that we wanted to advertise the Spalding Deep Tilling Machine to his readers and asked him how we could get the readers to take the most interest in the machine. "Why, that's easy," he said, "tell them what they want to know. Tell them what the Deep Tiller is doing for other farmers right here in the territory this paper covers. Show them what the machine has accomplished in the way of increased yields of such crops as our readers grow. If you can show them results worth while, they will sit right down and write to you."

Very well—we will do that. We print here extracts from a number of letters from farmers in this territory who have been using the Spalding Machine, tilling their soil 12 to 16 inches and harvesting the result of their labor in the shape of increased crops and enhanced land values. *What the Deep Tiller has done for these and others it will do for you.*

Tell us which crops you raise and what kind of soil you have and we will give you helpful information from our *Experience File,* including letters from farmers with conditions practically identical with yours.

THE EFFECT—

Martin City, Mo., Jan. 18, 1913.
I have plowed 150 acres in the Little Blue bottoms in Jackson county, Missouri, since the beginning of corn husking and I am plowing 14 to 18 inches deep and turning stalks under so completely and well that you would hardly know that it is a cornfield. In fact, this plow is doing the swellest job of plowing that I have ever seen. I bought a farm in this Little Blue bottoms, consisting of 283 acres, 200 acres of which was as level as a floor,and 100 acres of this farm is shown on the U. S. Survey map as being Wabash clay—(in plain words, the stickiest gumbo ever).This 100 acres had never been plowed since Columbus discovered America and was entirely covered with swamp willows.(I mean covered to.) I took this Spalding Machine and $5,000 worth of the biggest mules I could buy, put 5 head on this plow at a tim e,working 5-hour shifts, put them into this 100 acres and the work this plow did was a wonder to know and see. It put this wilderness into a seed bed, the best you ever saw. I planted this in corn and husked from 80 to 90 bushels per acre and am now finishing plowing this field for the second time. I have completely reclaimed this land and it is worth to cultivate $200 per acre any place in the U. S., and I feel that no other plow could do this work and I know that I am $10,000 better off for having known of this machine and having bought it. I consider this machine the most wonderful and valuable piece of farm machinery in existence and its invention will do more for future farming than all the agricultural colleges in the United States. I am now figuring on buying a tract of 680 acres of ground that can be made to raise large crops with this plow applied, which otherwise will remain wild blue stem for reason of expense of putting into condition.
J. H. Wallace.

Elsie, Neb., March 20, 1912.
Expect to keep my two Spaldings at work continually this spring and to be able to report later the exact results. My experience, so far as it has gone, has been very encouraging. Their work speaks for itself. Whenever deep plowing is needed, they solve the problem with a minimum of power needed, and no other machine that I have seen will mix in the same way the soil from top to bottom of furrow. A most important point in many soils.
Robt. Taylor.

Alliance, Neb., Nov. 16, 1912.
In answer to your letter in regard to the Deep Tiller as to the effect it had on my crop, would say that the corn made 60 bushels per acre, while that raised on the mould-board plowing made about 20. That on the deep tilled land would have yielded 75 bushels if it had not been so thick on the ground. There was very near double the stand that should have been. I don't consider that this last summer was as good a time to show the merits of the plow, as if it had been a dry season; we had double the rain we needed to make a crop.
We have done some fall plowing where we plowed with it last spring and it pulls considerably lighter than the first plowing did. I consider it the most profitable machine I have and would not take $500 if I could not get another one.
Yours truly,
(Signed) J. P. Barger,

Fulton, Mo., Nov. 30, 1912.
Until last spring I had never seen real plowing. One end of the field was so hard and stony that no mould-board plow could be held in the ground. The Spalding Machine cut its way through everything and left the surface in beautiful condition. It was so well pulverized that it was in much better condition undisced than was the shallow plowed portion after double discing. It was easy to pick out the deep tilled corn from a distance by the vigorous growth.
C. J. Smith, Mgr. Mo. State Hospital Farm.

Highmore, S. D., March 29, 1912.
I used the one they had at the Experiment Station here on two or three acres of my farm last year. I had corn on that land this year, and winter wheat was sown in the corn. I observed last fall that the winter wheat on the deep tilled land showed at least 50% better crop than the more shallow tilled land.
H. H. Stoner, Supt. Farmers' Institutes.

Fort Atkinson, Wis., Oct. 28, 1912.
I have your letter of the 16th inst., relative to my experience with one of your machines,which has been in use on my farm for nearly two years.
I can say frankly that the plowing it does is the only plowing that suited me in full. The way "it goes to the bottom of things," the results shown in the growing crops for two seasons (one of drought and the other of abundant moisture), convinced me that I have found another farm that the machine has disclosed to me.
My idea that one thorough breaking up of the soil twelve inches deep is enough for at least a term of years. Both logic and experience justify the use of this splendid tool.
W. D. Hoard.

Montevideo, Minn., May 25, 1912.
I have this day had a plowing demonstration on my farm with your Spalding Deep Tilling Machine on a piece of ground that I stalled with three other plows, even the late patterns of the ———which would not scour. We plowed it 13 to 14 inces deep,and it put the ground into garden condition, covering all cornstalks and stubs. I think as a plow it is the greatest machine I ever saw and will be anxious to see the results of a crop.
Paul J. Falkenhagen, Prop.,
Crystal Springs Dairy.

Brunswick, Neb., January 10, 1913.
My experience with the plow was very satisfactory. I had more than doubled my corn yield this year by tilling the soil 12 to 15 inches deep. I plowed 40 acres with the machine and the balance I farmed the old way, listed it in. The listed corn cultivated four times and harrowed once, made about 15 bushels of corn per acre. Where I used the tilling machine it made about 40 bushels. It was awful dry this season, the average corn was about 20 bushels to the acre.
E. G. Bauman.

Clarinda, Iowa, Jan. 20, 1913.
Replying to yours of January 2d in regard to the results of the use of the Spalding Deep Tilling Machine, will say that the field in which we used this machine was freer from weeds, worked easier and the soil was in a better physical condition than fields plowed in the ordinary way.
Marco B. Walker.

Plover, Wis., July 30, 1912.
We tried the Spalding Deep Tilling Machine on some marsh land and found the results to be much better than anything we could do with any other plow.
The ground contained many grubs and heavy grasses, but these did not prove to be obstacles to the plow.
Purviance & Robinson.

R. D. No. 2, Curtiss, Wis.,Nov. 5,1912.
I have received the plow. I like it fine. It works just the way I wanted it to. And now I am breaking sod 14 inches deep—goes right along with four small horses.
J. M. Johnson.

Lawson, Mo., Nov. 8, 1912.
Gentlemen:—
I recommend the Spalding Deep Tilling Machine to my neighbors and farmer friends. I bought your machine late in April. I plowed about ten acres on an average of 12 inches deep, contrary to advice of several friends and relatives. I had two good corn raisers on adjoining fields, one in the north and one in the east, across the fence, on practically the same land for production. One of these neighbors listed his corn, the other broke his ground as deep as he could plow with an ordinary walking plow.
We had a very dry season all through. Now for results.
My corn never seemed to want for moisture at any time and when the other fields were suffering for rain my corn had rich, dark color and was not affected by drouth. The stalk is larger, the ears are larger, better filled and superior in every respect.
I call it a success and have asked several that looked the field over; they all agree with me that my corn is the best they have seen in the neighborhood.
Respectfully,
(Signed) Clem L. Smith.

Thomas, Ill., Dec. 16, 1912.
My corn was one-third better when I used the Spalding Deep Tilling Machine.
Thos. A. Drayton.

Monmouth, Ill., Oct. 29, 1912.
The deep tilling caused a gain of 17 bushels per acre.
Henry F. Fair.

Wheaton, Ill., Sept. 12, 1912.
In reference to crops growing on land plowed with your Spalding Deep Tilling Machine will say, that on the deep tilled land we had a good catch of alfalfa and is now looking fine, while that on the ordinary plowing in the same field is so poor that we are plowing it up.
Also a small strip of corn sown on the deep tilled land is quite noticeable better than that on the ordinary plowing. In fact the stand of corn is immense, being from 13 to 15 feet high and on ground that in 1910 the crop was too poor to gather, the most of it being left standing in the field.
S. R. Bacon.

St. Paul, Minn., May 27, 1912.
We have had your Spalding Deep Tilling Machine in use for some two weeks. We are so pleased with it that we send you herewith another order for another one, which kindly forward at your earliest convenience to Gilfillan, Minn.
C. O. Gilfillan.

University Farm, St. Paul, Minn.,
July 23, 1912.
Some time ago I had the pleasure of seeing the Spalding Deep Tillage plow at work. I was very much pleased with the kind of work done. The plow seemed to have no difficulty in turning under standing cornstalks, completely covering all the stalks. I noted that the plow turned a perfect furrow to any depth from ten to sixteen inches, completely burrying all rubbish that might be on the surface of the land. I also noted that the draft of the plow was mush lighter where the land had been plowed with this deep tillage implement.
L. B. Bassett.
Asst. Prof. in Farm Mechanics.

Get Your Farm in the American Northwest

Locate in the Land of Prize Cattle and Crops Along the Northern Pacific Railway

Stay in your own home country—near to home markets and quick transportation—close to good neighbors and good schools. No isolated pioneering. More rapid development is going on along the Northern Pacific than you will find elsewhere in the Northwest.

The world's greatest prize for wheat—a $5000 tractor outfit was won by farmers in the Shields River Valley, Montana, on the Northern Pacific Ry., last fall.

The yield was 59⅓ bushels per acre from a 52-acre tract—farmed by the "dry farming" system of scientific agriculture.

An average man in Northern Pacific territory last year made a bountiful living for his family of eleven children and put $2,385 in the bank as the result of the season's yield from 40 acres of irrigated land.

There are 30 million acres of Government Homestead Land available to you for proving up under the revised and easy Homestead Law which requires only 3 years to acquire the land and allows 5 months leave of absence each year.

Tell us what state or section you are most interested in and let us send you free illustrated literature and particulars about low fares made especially so you can see these Great Prosperity States of America at small cost.

perience with it. Winter wheat was recommended for reclaiming wet lands and will do well on gumbo which doesn't heave as other soils. There are objections made by some to winter wheat because it must be grown on fall plowing upon which the average farmer likes to grow corn. To place corn in the rotation requires fall plowing for two successive years, which is considered an advantage because of the more thorough tillage that results. Early plowing, preferably in July immediately following removal of small grain was recommended with the additional requirement of deep plowing. Harrow every day, and after showers while waiting for the final preparation of the seed bed. Where tractors are used the harrow is attached directly to the plow. It is necessary to prepare the best of seed beds and to be careful to conserve the soil moisture. The condition of the seed bed has much to do with the amount of seed to use, as also has the time when sowing is done. Mr. Stoddard advocates sowing seed generously always, less being required for early sowing than in late, and using a drill. Early deep sowing stands hard winters best. Drilling in standing corn had too many disadvantages compared with the usual method. The seed used is the hard headed, white wheat which competes well with Kansas grown. The grain should be stacked and carefully threshed as often the waste would reseed the ground and more.

Ward Minor, of Whiting, Iowa, in his talk upon the subject of "The Production of High-Class Beef" urged first of all the selection of only those animals for both breeding and feeding that are of the highest beef type. No one should attempt to raise dual-purpose cattle for this section for this is an age of specialization. Beef cows that are good milkers should be selected, but the milking quality should not be given so much attention that the beef form is at all sacrificed. The selection of the best types of cows and a bull that is better than the cows, the building a silo and the production of baby beef are the requisites for the greatest success in beef growing in this state according to Mr. Minor. A silo makes the acres go farther in the production of beef, and is a matter of a great deal of convenience. Expensive barns are not necessary. For the winter a large, open shed and windbreak about the lots are about all that are needed. The most of the farmers of the corn belt will find it to their advantage financially to feed baby beef, getting the steers on the market at from fifteen to eighteen months of age. The calf must be well cared for from birth. At weaning time he must not only have been kept growing, but must also be fat. The calves should be on full feed from the time that they first learn to eat grain, and should be kept on full feed until they are put on the market some twelve months later. They will probably weigh 450 pounds by the first of December (April calves) and should for the next year make a gain of two pounds daily. The first winter they will eat about twenty pounds of silage, ten pounds of corn and one pound of oil cake if given all the alfalfa and clover hay they will take. This ration should be fed until grass comes, when the silage and oil meal should be reduced gradually, but continue feeding all the corn they will consume. Cattle on grass will eat the corn better if it is soaked for about twelve hours before feeding. In the fall let the silage gradually replace the grass and add oil meal to the ration again. This method should put the steers on the early winter market and make way for the following crop of calves.

That legumes are an important feature in the conservation of soil fertility was shown by Hugh Van Pelt in his talk upon the "Relation of Legumes to Farm Management." Farmers of the past have had no fear of exhausting the fertility of the soil and the present-day farmer is taking away plant food more rapidly than his forefathers with his greater crops and his improved methods of tillage. The most severe losses have been of nitrogen and it is this element that the legume crops are so well adapted to replace in the soil, giving them their great importance in the management of the farm. "The time will soon be here," said Mr. Van Pelt, "when the soil robber will be classed among the thieves and considered as much in disgrace as the man who cracks a safe or robs a postoffice. Unlike the farmer of forty years ago he has seen the direful results of extracting the fertility from the soil and he has been taught how to maintain and build up his land. Legumes are also important in the management of the farm because they furnish to the farmer the protein feeds which he must pay such high prices for when he buys them from a feed dealer. They are necessary to the proper feeding of the farm animals, and have a greater feeding value than is sometimes realized. In New York it was found that an acre of alfalfa produced one-half more digestible matter and six times as much protein as an acre of corn. The Kansas station showed that a ration of corn and cob meal with alfalfa hay produced $11.80 worth of meat where the same ration with sorghum substituted for the alfalfa produced $6.25 worth. Such examples of the worth of this class of plants are numerous, and show us that they ought to continue to be used even more than they have in the past."

In speaking of "The Relation of the American Farmer to the World's Beef Supply," J. J. Ferguson, of Chicago, said that there are three factors to be considered in the beef supply of the country and the prices which the finished product will bring. They are the producer, the distributor and the consumer, and of the three the one who exercises the most freedom in the entire problem is the consumer. The producer must ship when his steers or hogs are ready, the packer and the others who are aiding in the distribution of the meats must find some way to put the meats before the people, while the consumer may if he so chooses refuse to buy at all. In looking into the future of the business in this country the situation over the entire world must be studied. At home the increasing population and the decrease in the supply of meat cattle has shown that it is only a matter of a very few years until the home demand will take all the meats that we can produce. In fact, now the ex-

All veterinary inquiries should be addressed to this office.

SYMPTOMS AND TREATMENT.

ABORTION.

I have a bunch of twenty-five head of cows. About a year ago they began to abort, first just one losing her calf and then in two months another, until they averaged one a month. In September I shipped out all that had lost their calves and from then on I had no more trouble until ten days ago, since when two cows have lost their calves. I have been told that a cow seldom has more than one abortion and is generally immune after the first abortion. I have also heard that you can have an immune herd by keeping those that have aborted. Is there any truth to such a statement?

It is not true that a cow rarely aborts more than once, but there is some truth to the belief that a cow may become immune after she has aborted several times. Although a cow may become immune she remains infected with the germs of contagious abortion and may spread the disease to clean cows or young heifers. A cow should not be re-bred sooner than six months after she has aborted. The germs stay in an infected stable, so that getting rid of affected cows is not enough. The stable must be perfectly cleansed, disinfected and whitewashed, including the ceilings, and yards should be plowed, cropped and seeded down.

TUMOR.

One of my four-year-old cows has a hard bunch under the belly right by the navel, which seems to be sore to the touch. She is not in the best of condition, though she has good care and feed. She has never been sick, but always seems poor.

The enlargement may be a tumor, or an abcess may be forming, as the result of a bruise, and when soft will have to be opened for evacuation of pus. Meanwhile paint the lump once daily with tincture of iodine until skin is irritated; then stop for a few days and repeat. As the cow is thriftless she should be tested with tuberculin, as tuberculosis may be detected in that way.

ITCHING SKIN.

My sixteen-year-old horse has an itch on his neck and has rubbed all the hair off in scratching. We feed him on June grass, timothy and wild hay.

Make sure that chicken lice are not causing this irritation. Wash affected parts clean with a 1-50 solution of coal tar dip and then rub in a mixture of four ounces of sulphur and half an ounce of the dip shaken up in a pint of sweet oil. Repeat the latter application every three days until well.

RHEUMATISM.

I have a sixteen-months-old Holstein bull that I have always kept in a warm basement and standing on a plank floor. During the past week he seems to be getting stiff throughout the whole body, but especially in the hind part. He is turned out daily for about two hours.

It is a mistake to keep a bull confined in a warm stable. The stable should be so well ventilated that the temperature does not exceed fifty-five or thereabout. It may be that rheumatism has been contracted from going out of warm stable into cold. Give him half an ounce of salicylate of soda twice a day in feed. Keep the bowels active and do not feed heavily.

HOG CHOLERA.

Is there a sure preventive of hog cholera, and if so, what is it and where can it be obtained?

Hog cholera may be prevented in a majority of instances by the timely use of protective serum. Relative to obtaining a supply of serum, address a letter to the veterinarian of your state experiment station at Manhattan.

LAMENESS.

I have a bay mare four years old that has been lame for over two months. I examined her hind feet and found a hole on each side of her frog. What is the remedy for this?

Cleanse the foot and cut away all loose, rotten or underrun horn of sole and frog, then swab all exposed parts with a 1-500 solution of corrosive sublimate and at once cover with boric acid, cotton batting and a bandage. Renew the dressing once daily.

IRON DANGEROUS FOR SOWS.

Is sulphate of iron injurious to brood sow, providing it is fed from the time they are bred until they farrow? I have been feeding it in slack coal in the proportion of a shovelful of coal to a thin layer of salt and a thick layer of sulphate of iron ground.

As often stated here, sulphate of iron should not be fed to pregnant animals, as it is considered dangerous. You will find this advice given wherever we have prescribed this remedy for worms.

LUMP JAW.

One of my cows has the lump jaw. I would like to be advised as to whether this can be cured, and if so, how.

The disease may be cured if taken in time and if the bones of the part are not involved Treatment consists in cutting out the diseased mass, or causing it to slough out by the use of caustics. It will be best to have the case attended to by a veterinarian.

SPAVIN.

I have a fine, black mare, eight years old, weight 1,400 pounds. In driving her she became lame in her left hind leg at the hock joint and a small bunch appeared there and still remains. She seems to be lame at times and part of the time she is not lame.

You do not say whether the lump is at the back or low down on the front of the hock. If behind it is a curb, if in the other position it is a spavin. In either case it will have to be blistered after removal of hair, but for spavin it would be best to have the part fired and blistered and then give six weeks rest in stall.

EYE DISEASE.

I have a six-year-old coach mare

YOUR NEIGHBOR'S HOGS ARE DYING

YOURS MAY BE NEXT!

Nearly $50,000,000.00 of cold hard cash for hogs which should be in the pockets of the farmers, was lost last year, because hog owners would not take the simplest precautions to protect their stock.

Worms cause 90% of all hog losses. Even the dreaded cholera attacks herds only after worms have sapped their vitality and weakened their power to resist disease. All hogs have worms, from the time they are a few weeks old. **Yours have them.**

Columbian Stock Powders will positively destroy all worms and dispel them in twelve hours after feeding. They will stop your hog losses. The oldest stock powders on the market; the leader for 25 years. The only powders that never fail to expel all the worms.

COLUMBIAN STOCK POWDERS are strictly a medicine—not a food. They make your hogs thrifty, tone up the system, and prevent Cholera, Thumps, Scours, Coughing, Fevers, etc. They aid digestion and make feed go 25% farther. Endorsed by prominent stockmen everywhere.

ABSOLUTELY NECESSARY FOR BROOD SOWS. *Keeps them in good condition and insures strong, healthy litters.* Makes the milk flow more abundant and purer, and eliminates the feverished condition that results in unhealthy, runty pigs. You must put your sows in condition **right now** to get the most thrifty pigs.

Hog Cholera is unknown where Columbian Stock Powder is used.

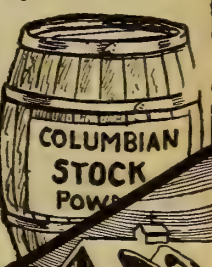
WE HAVE A SPECIAL FREE OFFER to make you at this time which we have never before made. You cannot afford to miss it as it means dollars to you if taken advantage of **at once.** *You can prove the value of* **Columbian Stock Powders 90 days before you pay a cent.**

Write us today for full information and tell us how many hogs you have.

COLUMBIAN HOG & CATTLE POWDER CO., 1450 Genesee Street, KANSAS CITY, MO.

AGENTS WANTED

We have an unusual money-making proposition to offer you if you are a man of good standing and good reputation in your community. The pay is large and sure and the work is not hard. *Write us for particulars giving references. It will pay you to write to-day.*



Horse Lameness Hog Cholera Poultry Distemper

Sloan's Liniment is a quick and safe remedy for any kind of lameness in horses, for cholera or distemper in hogs and chicken distemper or roup.

Good For High Lameness.

Mr. BAILY KIRBY, of Cassidy, Ky., writes:—"I used Sloan's Liniment on a mule for 'high lameness' with success. I am never without a bottle; have bought more of it than any other remedy for pains."

Chickens All Got Well.

Mrs. J. H. WHITE, 101 Cedar St., Montgomery, Ala., writes:—"In the fall my chickens were all sick. One had bumble-foot and one had the worst kind of a sore mouth and windpipe, her eyes were closed and her head turned around to the back. I used Sloan's Liniment on them and I am happy to say that every one of them got well."

SLOAN'S LINIMENT

A Remedy For Hog Cholera.

A. J. MCCARTHY, Idaville, Ind., writes:—"My hogs had hog cholera. I have used Sloan's Liniment now for three days and they are almost well. One hog died before I got the Liniment, but I have not lost any since."

At all Dealers—Price 50c. and $1.00. Sloan's book on horses, cattle, hogs and poultry sent free.

Address Dr. Earl S. Sloan, - - - Boston, Mass.

Contagious Abortion

Worse Than Tuberculosis in Cows

Fully a fourth of all the cows of the country are affected by it. There is loss of calf, loss of milk, damage to the cow, damage to the entire herd. Disease is highly contagious and spreads rapidly when started. Losses run into hundreds of millions every year.

Dr. David Roberts' Anti-Abortion Treatment Stamps Out the Disease

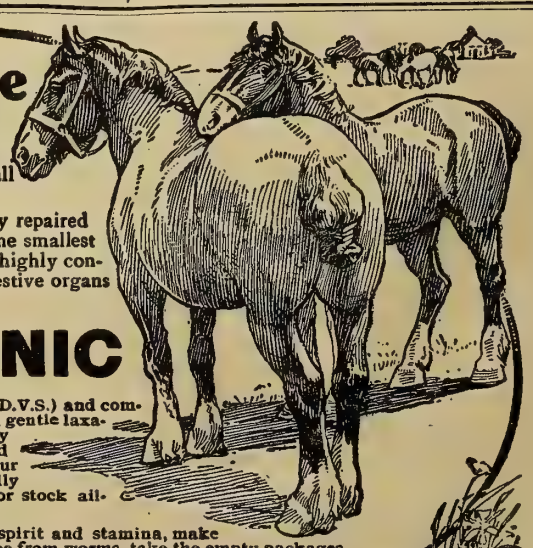
because it meets the germ at every turn.
ANTI-ABORTION medicine overcomes the germ in the mother's blood.
ANTISEPTO overcomes the germ in the genital organs.
DISINFECTALL overcomes the germs in the stables.
No one medicine can possibly overcome the disease.
Dr. Roberts' treatment, applied by yourself, makes it impossible for abortion to exist in your herd.

"Experiment is more costly than neglect" —Dr. Roberts.

The Practical Home Veterinarian, Dr. Roberts' great book, gives particulars on all animal diseases. 184 pages. Practical, plain, authoritative. Best book published for posting up on your animals. Distributed free at drug stores. If not at yours, send 25 cents and receive a copy direct, postpaid.

Dr. DAVID ROBERTS VETERINARY CO. 914 Broadway, Waukesha, Wis.

The Backbone of the Farm



The horse is the backbone and sinew of every farm—the call for horseflesh and muscle is continuous.

This everyday utilization of tissue and muscle must be constantly repaired and can only be repaired by *digested food*. But as the horse has the smallest stomach of any barnyard animal of its size and its feed much more highly concentrated, it is necessary to invigorate and tone up the horse's digestive organs to make sure of his getting the good out of his dinner.

DR. HESS STOCK TONIC

is a scientific preparation formulated by Dr. Hess (M.D., D.V.S.) and composed of bitter tonics that give tone to the general system, gentle laxatives that regulate the bowels and diuretics that act gently on the kidneys. It not only gives the workhorse spirit and stamina, but it will make your cows give more milk, your steers digest more food, and its results are especially marked when fed to hogs and pigs. It relieves the minor stock ailments and expels worms.

Dr. Hess Stock Tonic contains:
Nux Vomica. Digestive and Nerve Tonic.
Quassia. Digestive Tonic and Worm Expeller.
Sulphate of Iron. Blood Builder and General Tonic.
Sulphate of Soda. Laxative and Liver Tonic.
Common Salt. Appetizer, Cleanser.
Epsom Salts. Laxative.
Nitrate of Potash. Stimulates Kidneys.
Charcoal. Prevents Noxious Gases.
Fenugreek. Tonic and Aromatic.
The above is carefully compounded by Dr. Hess (M.D., D.V.S.), with just enough cereal meal to make a perfect mixture.

Our proposition: If it does not give your workhorse spirit and stamina, make all of your stock thrive better, free from disease and free from worms, take the empty packages back to our dealer and get your money back. Every pound sold on this guarantee. A 25-lb. pail $1.60; 100-lb. sack $5.00. Except in Canada and extreme West and South.

FREE. Dr. Hess (M.D., D.V.S.) will at any time prescribe for your ailing animals free of charge if you will send him full details. Mention this paper and send 2-cent stamp. 96-page Veterinary Book also free.

DR. HESS & CLARK, Ashland, Ohio.

DR. HESS POULTRY PAN-A-CE-A. Your hens that are now laying eggs for hatching should be in the pink of condition, so that the offspring may have an even chance to reach maturity. Just a penny's worth of Dr. Hess Poultry Pan-a-ce-a will feed thirty hens, which will insure red combs and plenty of hen music. It will make your hens lay, it will insure health in your poultry flock, excellent for little chicks, prevents those little bowel troubles and complications, also prevents and cures gapes, cholera, indigestion and the like. 1¼ lbs. 25c (mail or express 40c); 5 lbs. 60c; 12 lbs. $1.25; 25-lb. pail $2.50. Except in Canada and extreme West. If your dealer cannot supply you, we will. Send 2c for Dr. Hess 48-page Poultry Book, Free.

INSTANT LOUSE KILLER KILLS LICE

weighing about 1,100 pounds. She has been fed corn stover, oats, straw, clover hay, timothy and a quart of oats at night, with free access to salt and spring water. About six weeks ago her right eye watered profusely as if hurt by corn blades. I washed it with a solution of borax in hot rain water and apparently it healed up. About two weeks ago the eye began to cloud up and now seems to have a gray film over the eyeball. She is not blind yet.

The mare no doubt has periodic ophthalmia (moon blindness) which is incurable and results in blindness of one or both eyes, after successive attacks. An affected mare should not be used for breeding as tendency to the disease is considered hereditary. Wash the eye twice daily with a 10 per cent solution of boric acid.

Affairs of Corn-Belt Beef Producers' Association.

IN HIS address delivered at the recent annual meeting of the Corn-Belt Meat Producers' Association, the president of that association, Mr. A. Sykes, took up in detail the various lines of work that have been carried on by the association during the last year. At the time of the last annual meeting there were pending two very important cases which the association was handling in the interest of the farmers and stockmen. One was the proposed advance in rates of 33 1-3 per cent on stocker and feeder cattle and sheep, which was pending before the Interstate Commerce Commission; the other the advance in minimum weights on cars of live stock shipped within the state, pending before the Iowa Commission. The public hearings before the commission had been concluded and dates set for the submitting of printed briefs and for oral arguments at Washington, D. C. Accordingly, soon after the last annual meeting Judge Henderson, commerce counsel for the state, and the president and secretary set about preparing the brief, to be submitted by January 2d. Then followed the preparation for the arguments to be made before the entire commission at Washington on February 10th.

Aside from Judge Henderson and the president of the association, the live stock exchanges of Kansas City, Omaha, Sioux City and South St. Paul were represented before the commission and made arguments in favor of a continuance of the old rates and customs. On the other hand, the railroads were represented by their ablest counsel. On March 23d the commission handed down its decision refusing to allow the railroads to cut out the 75 per cent on stockers and feeders. This was a complete victory for the association and the live stock exchanges that assisted in the case. The winning of this case means a saving to the farmers and feeders of the state of from $200,000 to $300,000 annually in freight rates.

On the minimum live stock car case the commission rendered its decision last September. It provides that the standard minimum shall be 22,000 pounds on fat cattle, 20,000 on stocker and feeder cattle, 16,000 on hogs, 20,000 on sheep in double-deck cars, and 10,000 on sheep in single-deck cars; these minimums to apply regardless of the size of the car ordered. It is therefore not necessary to order small cars for shipment within the state in order to be protected on the low minimum.

The question of the rate on fat sheep when loaded for interstate shipment in single-deck cars, when double-deck cars had been ordered, has at last been settled, and the rate on such sheep shall be the double-deck rate; provided, however, that the shipper gives the railroad five days' notice when ordering double-deck cars. Shippers should therefore order their double-deck cars five days in advance in order to secure the double-deck rate when single-deck cars are furnished by the railroads.

During the fall of 1911 the railroads made application to the railroad commission for an advance of 12½ per cent in rates on all kinds of live stock shipped within the state. This case was never pushed, the railroads never requested a hearing on the application, and just recently they dismissed the case. This was certainly very courteous on their part, as it no doubt relieved the association of a very bitter and prolonged fight to prevent those advances. If the farmers had not been organized, and had there been no Corn-Belt Meat Producers' Association, those advances would not only have been requested, but they would have been put into effect, and the farmers would have been paying them for some time.

A word about the recent movement of the Chicago Live Stock Exchange to advance commission charges for selling live stock. Ever since the closing of the offices of the Co-operative Live Stock Commission Company it has been felt that it would only be a question of time until a demand would be made for advanced commissions; and the very light receipts during the past summer gave the agitators and the fellows who were just hanging by the skin of their teeth an excuse to make this demand.

Without the officers of the association having any knowledge of what was going on the following increases were made in commissions. On all straight car loads of live stock over the following minimums an extra charge of five cents per 100 is made:

Cattle, 23,000 pounds.
Hogs, 17,000 pounds.
Sheep in double-deck cars, 22,000
Sheep in single-deck cars, 12,000 pounds.

Up to these minimum weights the commissions remain the same as before.

Without doubt the past year has been one of the worst in regard to service and accommodations for the stockmen that has been experienced for years, and a flood of complaints and protests has been filed by the members. Had these complaints been confined to the winter months of 1912, when the snow and cold were so severe, we should not have wondered at them; but the facts are that the shippers have complained of the poor service and accommodations during the entire summer and fall. The shippers' reports filed by the members show that the service was slow and the accommodations for the stockmen very bad in many instances. Especially is this true as to overcrowding of way cars and their unsanitary conditions. It is a very common occurrence to crowd

Horse-Training and Colt-Breaking

Successfully Taught by Mail. Book Free!

Prof. Jesse Beery, King of Horse-Tamers and Trainers, Will Send Horse-Trainers' Prospectus FREE

If you love horses and are ambitious to make more money, you will be intensely interested in the remarkable Horse-Trainers' Prospectus, which tells all about it. After a wonderful career as a professional horse-trainer, which brought him fame and fortune, Prof. Jesse Beery, acknowledged to be the World's Master Horseman, is devoting his time to teaching his noble profession to a few carefully chosen pupils, entirely by correspondence.

PROF. JESSE BEERY
World's Master Horseman

$1,200 to $3,000 a Year at Home or Traveling

Hundreds of Beery's graduates are making all kinds of money training horses, breaking colts, teaching horses to drive without bridle or lines. Owners gladly pay $15 to $25 a head to have their horses tamed, trained, cured of bad habits, or to have green colts properly broken. A good trainer can always keep his stable full of horses.

Is Your Horse Vicious, Tricky, Balky?

You can cure any horse of bad habits and actually double its value by this wonderful system. Everywhere are unruly, tricky, balky, dangerous horses—"not worth the powder to blow them up." These horses, by the Beery Methods, can quickly be made safe, useful, valuable.

Ignorance of the simple principles discovered by Prof. Beery has cost the lives of thousands. He tells his pupils the priceless secrets of conquering the most vicious "man-killers"—enables them to actually **duplicate** his most marvelous feats.

The Beery System Making Money for Thousands

Prof. Beery's graduates in all parts of the world are making money training horses, breaking colts, giving exhibitions, buying up cast-off "tricksters" and "man-killers," taming and training them and **re-selling at high prices.** For example, take the case of Emmett White, Kalona, Iowa, now a prosperous professional Horse-Trainer. Mr. White says: "I wouldn't take $500 for what you have taught me. You may judge of my success when I tell you that I have been able to buy **a home and an automobile** solely through earnings from training horses as taught by your excellent methods." A. L. Dickinson, Friendship, N. Y., writes: "I am working a pair of horses that cleaned out several men. I got them for $110, gave them a few lessons and have been offered $400 for the pair."

CLIP THE COUPON, sign and mail at once for the Free Book, written by a man who won fame and fortune, thrilling vast audiences everywhere, by marvelous skill in training horses and man-killing stallions. Send the coupon today. Tell him about your horse. (44)

Save Your Hogs—

Anything that helps you keep disease from hogs is certain to increase profits at market time; and in helping you do this Lewis' Lye is therefore worth many times its cost.

In safeguarding your money investment in hogs—don't overlook the importance and value of lye. Lewis' Lye, because of its guaranteed purity, full strength—*its simplicity of feeding*—has long been recognized as the surest hog conditioner.

Lewis' Lye

The genuine has a Quaker label on every can.

The Standard for Half a Century

Saves its cost hundreds of times a year for *others*. When fed to your hogs consistently, according to our specific directions, *it will do the same for you*—and produce big, fat, healthy animals at market time.

On The Farm—

Lewis' Lye, as the pure lye it *is*, is especially recommended as a hog conditioner and preventive of disease. It is also valuable as a disinfectant and for spraying trees, vines, etc., etc.

In The Home—

For soap making, softening water, destroying vermin cleaning pots, pans, dairy utensils, cream separators, woodwork, windows, etc. Lewis' Lye is supreme because it cleans without scouring.

When you order lye see that the purest and best is delivered to you. Get Lewis' Lye—the only lye made and sold by manufacturing chemists, 98% purity and full strength guaranteed.

Our booklet suggests many uses for Lewis' Lye on the farm and in the home that *you* should know about. Mailed free on request. Address:

from twenty to thirty men into one of these way cars. This is certainly overcrowding humanity, from a humanitarian standpoint the railroads should furnish at least decent accommodations for the shippers, so that they might ride with as much ease and comfort as the animals they are shipping.

Also many complaints come from shippers that their stock has been unloaded at some small town where there is neither feed nor water, and but a few miles from the Union Stock Yards, because the conductor claimed the thirty-six hour limit had expired. It is found that stock is often unloaded within twenty-five to fifty miles from Chicago and allowed to remain in those little two-by-four yards for from eight to twelve hours; when at the pleasure of the railroads they are picked up and taken into the stock yards, arriving too late for the market, and of necessity must be held over until the next day. This is certainly a gross injustice on the part of the railroads by taking undue advantage of the thirty-six-hour law. The intention of the law was to give the railroad ample time to deliver the stock from the farthest point in Iowa inside of the thirty-six-hour limit. It is well remembered that their plea was for an extension of the twenty-eight-hour law in order to enable them to reach the market without the necessity of unloading the stock, which they claimed they could not do under the law as it was then enforced. At that time the stockmen believed that the railroads were acting in good faith, and took them at their word and consented to the extension of time to thirty-six hours; but since then they have learned the railroads were only playing for more time to get stock to market, and that the speed on stock trains had been reduced in proportion to the extension of time, and that the percentage of live stock now unloaded on account of the expiration of the time limit is practically as large as it was under the twenty-eight-hour law. This should not be the case, however, and it does seem that any Iowa-Chicago line of railroad ought to be ashamed to confess that it cannot deliver a car or cars of live stock from the farthest Iowa point to Chicago inside of thirty-six hours, when they formerly did it almost every day in the week inside of twenty-eight hours.

Then there is the question of a five-day-per-week Chicago market instead of three, which is being agitated again by the commission men of the the Chicago Live Stock Exchange. Some time ago a meeting was held in Chicago at which representatives of the exchange, the packers and the railroads decided to try to further the plan for a five-day-per-week market, and if possible distribute the receipts more evenly over the five-day period. They are now asking the feeders and shippers to join with them in making this plan a success. This is certainly a commendable undertaking and one in which our members should most heartily join.

THE POSSIBILITY OF GROWING SUGAR BEETS.

To the Editor of The Homestead:

When interest in the manufacture of sugar from beets was first aroused in this country, seventy-five or eighty years ago, Michigan was honored with the distinction of being the first state in which the new project met with success. While the sugar industry did not develop as rapidly in Michigan at first, as it did in some of the western states, it's growth during the past thirty year leaves little room for doubt as to whether or not sugar beets can be grown with profit in that section of the country. In spite of the rapid development of the industry in some of the western states, where natural conditions are far more favorable, Michigan still stands well at the top of the list of beet sugar producing states. It is rather remarkable, therefore, that the industry has spread so slowly to the surrounding states, where natural conditions are about the same, if not better. The cause, however, may be found in an observation of the general trend of development in these states during the past.

The general practice in the development of a new section of the country is to grow the one crop that brief experience has shown to be best adapted to existing conditions. This particular crop is usually exploited on as an extensive scale as possible, to the exclusion of all others. Thus in the development of the north central states, west of the Mississippi river, wheat was the chosen crop and in North Dakota and northern Minnesota wheat will doubtless continue to be the predominating crop for many years to come. In the eastern part of South Dakota, southern Minnesota and northern Iowa, however, wheat has been gradually replaced by other crops; principally corn, and other cereals.

While beet culture has spread to some extent to Wisconsin, it has played only a very minor part in the cropping system in northern Iowa, or southern Minnesota. This dilatory progress in the industry cannot be attributed to the lack of interest on the part of capital, but rather to the attitude taken by the farmers themselves.

As has been previously stated, such crops as wheat, corn, and other cereals may be produced by extensive methods of agriculture. The development of modern agricultural machinery has made it possible for one man to care for a considerable area of one of these crops with comparative ease, and at but small expense.

Sugar beets, on the other hand, are a crop that is particularly adapted to intensive methods of farming, requiring a large amount of time and hard labor.

There are several reasons, however, why beets can be grown with profit in the section in question. In the first place, it has been adequately shown, both by experimentation and by practice, that conditions are favorable for the production of good quality beets. To be sure they cannot compete with beets from some of the western states on the matter of quality, but they can be produced with a percentage of sugar high to give the factory a fair working margin.

Then too, beets are a money crop, producing returns largely in proportion to the time and labor expended. It has been shown by experimentation that not only the yield per acre, but the percentage of sugar which the beets contain, is influenced to a marked degree by the amount of cultivation which they receive.

With good care under normal conditions, a farmer should be able to

DEPARTMENT OF ANIMAL INDUSTRY
DETROIT, - - MICHIGAN

Built by One of the Largest Concerns in the World

for American Roads Especially

The J. I. Case T. M. Company, Inc., maker of the famous Case Forty, is a $40,000,000 concern. For seventy years it has manufactured the finest machinery in its lines. You know, and your friends know, the quality.

The Case Company has thousands of customers in every part of the United States. Our machinery goes to all parts of the world.

We are making the Case Forty for our old customers as well as for hundreds of people who will drive cars in the cities.

The Case reputation is staked in each car. Our methods of building, our grade of materials, must be better than usually go into Forties to maintain our 70-year-old standards.

Savings We Do Not Make

We could make large savings on the cost of our motors by using cheaper materials. Also on clutches, transmissions, drive shafts, wheels, axles and other vital parts. We could cut our assembling cost in two, and this cost is one of the largest.

We put into the Case—in every car—hundreds of dollars of extra value that does not appear on the surface. But that insures Case Service. No other Forty at $2,200 ever gave equal value.

What Permits It

We can do what other makers can't. We created no new business when we started making automobiles. We had 10,000 dealers and 65 Branches before a car was sold. We saved that selling expense. We saved officers', sales manager's and advertising department salaries, rent and other overhead charges.

Makers of other cars must include such costs in the price.

We put all these savings into the car without charging buyers an extra penny.

Have the Catalog

Write for the Case Catalog, or send the coupon for it. See what sort of car *can* be made for $2,200. Note the Case Thirty also at $1,500.

Case Cars are built for American roads after 70 years of building machinery to travel those roads. You need such a car.

This Emblem on an automobile has the same significance as the Sterling mark on silver.

produce from twelve to fifteen tons of beets to the acre. With the prevailing price of $5 per ton, this would give him a gross return of $60 to $75 per acre. According to an estimate made by the department of agriculture, it requires about seven tons of beets to pay for the production of the crop, which would leave a net income of from $25 to $40 per acre, returns as large as can reasonably be expected from any crop. Large yields of twenty to twenty-five tons to the acre are not at all uncommon, and will, in all probability, be more common as intensive methods of cultivation become more generally practiced.

Another factor in favor of the sugar beet on the small farm, is the important place which it can profitably fill in the crop rotation. It is a plant that requires care and skill in its production, and the large amount of cultivation which it must receive cannot help but leave the mark of its beneficial effect upon succeeding crops. Its deep-rooting character makes it especially valuable in loosening up the sub-soil, providing better aeration and drainage, and in other ways making the lower soils a better feeding ground for the roots of other crops. It has often been objected that beets are hard on the soil, and it is true that they do remove considerable amounts of the mineral elements, phosphorus and potash.

The exhaustive effects of the sugar beet crop is well shown by results obtained at the Michigan Experiment Station in a comparison of results obtained from fertilized and unfertilized plats. The decrease of yield on the unfertilized plats as compared with plats receiving annually a normal application of fertilizers was 1.25 per cent the first year, 11.25 per cent the second, and 13.85 per cent the third.

In view of what has been said as a general guide to the proper use of fertilizers on the sugar beet, when a complete fertilizer is deemed necessary, we would suggest a mixture having about the following composition, nitrogen 4 per cent, available phosphoric acid 6 per cent and potash 9 per cent.

The time is near at hand when commercial fertilizers will have to be used to retain the productive power of the soil, regardless of the crop grown, at any rate, the return from the beet will readily warrant the expenditure. On the other hand, a large part of mineral elements removed from the soil are stored in the leaves and crowns which are left on the farm, and may either be turned back into the soil, or fed to farm animals, forming a very valuable succulent feed, especially in a dairy ration.

The great drawback to the production of the sugar beet in the north central states, is the labor problem. The farmer of that section who is accustomed to the handling of his farm with machinery, is particularly averse to the drudgery of the hard labor involved. By co-operation between the factory and the farmer, Michigan has solved this problem by importing cheap labor to do the hand work in the beet fields and the same solution is equally applicable to the other states as well.

The United States, at the present time, is producing only a comparatively small percentage of the sugar consumed within its borders, so that there is ample room for a much larger development of the industry, and capital has shown itself to be ever ready to provide means of extraction, provided enough of the raw product could be supplied to warrant the erection of a factory. It is a field which indeed holds out bright prospects for the farmer of that section, and one whose returns both directly and indirectly have too often been underestimated. There are large areas admirably adapted to the production of this crop, and the farmers, when they are ready to take up the work in earnest, will reap ample rewards.

George Wright.

SALT SUPPLY OF KANSAS.

Kansas has enough salt to last the world 10,000,000 years. That is the substance of a report made public by Prof. Erasmus Haworth of the University of Kansas, state geologist. Professor Haworth made a survey of the salt resources of Kansas and has prepared a map showing in detail the quality and amount of the known salt beds of the state. So vast is the area of saline deposits that Professor Haworth is confident that the world need fear no salt shortage for countless ages.

"There are at least 10,000 square miles of salt beds in Kansas," said Professor Haworth. "I have no doubt but that there are 20,000 or 30,000 square miles, but I based my report only on proven territory. The average thickness of the salt bed is 300 feet all practically pure salt. "The salt may be obtained by mining or by using an evaporation process. By the latter method, most of the commercial product is obtained. Rice, Reno, Ellsworth and Kingman counties are underlaid by salt beds."

Danish eggs bring fancy prices because they are always fresh, well sorted, well packed and guaranteed. Each egg must be stamped with the date on which it is laid, with its own number and that of the group to which it belongs, so that it is possible to ascertain exactly who supplied each egg. The farmer who sends in a bad egg is fined by the society.

SAVE-THE-HORSE

(Trade Mark Registered.)

THE LAME HORSE is never cured whose owner reads and doubts,---BUT FAILS TO ACT---Here is a case in Point,---And what Happened to this Subscriber is Taking Place with Thousands.

Letter No. 1 Orleans, Vermont, April 26th, 1912.
Troy Chemical Co., Binghamton, N. Y.—Your adv has given me courage to try again. I have a valuable pacer. Two years ago he went lame. I tried every remedy and Doctors have blistered three times for spavin and twice hip. The symptoms are—etc., etc. I determined to see what you think. HALE MASON.

Letter No. 2
Orleans, Vt., May 2nd, 1912.—I received your letter and book yesterday and believe you are right about its being a bone spavin. I was so encouraged I drove eight miles and bought a bottle of Fred D. Pierce, druggist at Barton, and will closely follow your special instructions. Thanking you for your quick reply to my first letter, I remain,

Letter No. 3 HALE MASON.
Orleans, Vt., Oct. 2, 1912.—Perhaps you expected to hear from me before, but I have been waiting to see if any trouble would return after stopping the treatment. I am pleased to say the horse is well. I cannot thank you enough for your interest and the advice you gave. If I had known about it two years ago it would have saved me a lot of money. Yours respectfully, HALE MASON.

Save-The-Horse has stood alone and unique among veterinary remedies for over seventeen years.

Every bottle of Save-the-Horse is sold with an iron-clad contract that has $60,000 paid-up capital back of it, guaranteeing to permanently cure or refund the money; no matter whether it is Bone or Bog Spavin, Tendon disease or Puffs—nor how aged, serious or complicated the lameness or blemish may be.

But write, describing your case, and we will send our—BOOK—sample contract, letters from Breeders and business men the world over, on every kind of case, and advice—all free (to horse owners and managers).

Write! **AND STOP THE LOSS.**

TROY CHEMICAL CO. 3 Commerce Ave., Binghamton, N. Y.

Druggists everywhere sell Save-the-Horse WITH CONTRACT or sent by us Express Prepaid.

Can your horse use his full strength?

Horses with sore shoulders or galls can not do their best work unless they have a comfortable, non-irritating collar. Besides being comfortable, the Lankford Horse Collar will cure galls and sore shoulders.

The Lankford
HUMANE HORSE COLLAR

$1.25 is made with the idea of enabling a horse that has sore shoulders to put his full strength into his work without hurting him. It does this because it can be adjusted to fit any shape neck. It is stuffed with pure medicated cotton, which absorbs sweat and impurities thrown off by the sores and effects a speedy cure. Lasts three or more seasons. Acts as collar and pad combined.

Get our Memorandum Account Book. It's FREE

Keep a record of your sales, orders, business deals, appointments, etc., in the book we will send you. It won't cost you a cent. Send for it now—before you forget it. If your dealer hasn't the Lankford Collar, write us. Prices, $1.25 up.

"Baby beef" is bringing Ozark farmers $50 per head profit in one year

IF there is one thing that emphasizes the special advantages in the Ozarks for stock raising, it is the unusual success and big profits which farmers there are making with baby beef. Good stock, after one year's feed, is bringing them $50 per head profit!

Here is the plan that the Ozark farmer is following to get such profits. He buys up good grade calves at $15 to $20 a head (providing he dosn't raise them himself). Then, instead of letting them "mosey along" until the second year with just enough rations to keep them in good trim, he starts feeding them for quick flesh gains *right away*. The calves are put on flesh-producing field grasses until after corn is harvested; then the shocks, with a little extra now and then, keep them going until January. That leaves only three months of winter feeding (for pasture is green again by April 1st).

By that time the beef will weigh around a thousand to twelve hundred pounds easily, and will top the market at $8 a thousand or more. The feeding, on account of the short winter and other advantages in the Ozarks, doesn't cost more than $25 per head, all told—that's a clean profit of around $50 from every baby beef.

It's a mighty profitable business, and Ozark farmers are not slow to take it up.

Baby beef is just *one* way of making money in the Ozarks. It is *just one* example going to show why all kinds of stock raising is so profitable in the Ozarks. Hogs, for example, bring Ozark farmers around 5 cents a pound profit, because they cost so little to produce per pound—only 2½ cents, or less. Sheep make $12 per ewe easily, and Ozark dairymen are getting $8 to $10 per cow per month, regularly.

The reasons for these profits are easy to understand. The Ozarks have very mild, short winters—good pasture from April 1st to January 1st—only three months of winter feeding. Right there is a mighty big cut in costs.

The soils of the Ozarks will grow practically every variety of grass, and forage crops—alfalfa, peanuts, cowpeas, corn—all the quick-fattening products.

The Ozarks have an unlimited supply of pure water, splendid drainage and a healthful climate that keeps stock sickness down to the minimum.

The Ozarks are *right at the doors* of St. Louis, Kansas City and Memphis—big markets offering the very highest quotations for all kinds of stock and farm products.

But all these advantages mean more when it is realized that good land can be bought now in the Ozarks at $12 to $15 per acre. It's a proposition that deserves any man's serious thought and investigation right *now!*

A free book for you!

It's not the kind you can pick up anywhere. Double sized pages, 75 actual photo pictures of farms—some in full color. Written by a man who knows farming. Takes up the Ozark sections, county by county, and describes the farming conditions there. Also tells actual experiences of Ozark farmers. I haven't many copies of this book on hand; please drop me a postal to-day for your free copy.

JOHN D'ARCY CO., Dept. 75 St. Louis, Mo.

UNCLE SAM AS A ROAD BUILDER.

Scarcely any public work is more permanent in its character when once undertaken than that of highway improvement. When a road is once located it is difficult to change its location. When once a foundation has been laid for a permanent highway the laying of a new foundation necessitates reconstruction of the entire surface.

It is, therefore, important that, before entering upon a plan of national participation in highway construction, we should adopt a definite and comprehensive plan based upon anticipation of needs and operations for many years to come, in order that we may be certain the money expended and the work done in one year will co-ordinate with the expenditures and constructive work of the next year, and for many years to come. Care in planning a system and methods of procedure may save us millions of dollars of waste or bring vastly greater results than would be attained under an ill-considered and haphazard action.

In the last postoffice appropriation bill, the house inserted a provision, after the bill had been reported from the committee and while it was under discussion on the floor of the house, providing the classification of roads used for the carrying of United States mails and for the payment by the government of an annual sum as rental, in consideration of the fact that the government uses these highways.

Such payments were to be either $15, $20 or $25 a mile—according to the character of the road over which the mails were transported.

This provision was rejected by the senate for several reasons: First, it did not provide that the federal appropriations should be expended in highway improvements; second, it established the policy of obligating the government to pay to local communities compensation for the use of highways in conducting the rural free delivery service—a service that is conducted at a great loss to the government and for the special benefit of the communities served; third, it was the beginning of a system of compensation that had not been carefully considered, but which when once adopted would certainly grow to immense proportions.

It is estimated that in the beginning the appropriations under the provision proposed by the house of representatives would be approximately $18,000,000 annually. It is beyond question that this amount would be very rapidly increased under the pressure of constituents upon their several members of congress, until the highway appropriations would be recognized as the grossest abuse of the pork barrel feature of national legislation. From every section of the United States would come the protest that the compensation provided is inadequate for any practical purpose, and that the government must very materially increase its allowance; thus resulting in expenditures far beyond present calculation and without any assurance of permanent results.

Believing that the government should not enter upon any policy of participation in highway construction without first giving careful attention to every phase of the subject, the senate rejected this provision and inserted a substitute, directing the appointment of a joint committee of the two houses for the study of the entire question and the drafting of such legislation as may meet the approval of the committee.

In legislating upon the subject of national participation in road improvement four different problems must be solved:

First—To devise a plan that shall insure an equitable distribution of the funds of the different sections of the United States.

Second—To determine whether the money should be expended in the construction of main arteries for interstate commerce, or to be expended upon local branch lines that will serve merely as feeders for railroads.

Third—to devise a plan of co-operation with the different states that will be acceptable to them and insure the co-operation of all with the federal government.

Fourth—To throw round the national funds such safeguards as will insure their proper expenditure and guard against waste.

I think it will be generally felt that a plan should be adopted which will guarantee an expenditure of national road funds in the several states approximately in proportion to the amount each state contributes to the fund. I say "approximately," for I apprehend that circumstances may show the need of expenditure of a somewhat larger portion in the undeveloped and thinly settled regions of the United States than is expended in the thickly settled region.—[Senator Bourne in The Saturday Evening Post.

COST OF RUNNING THE AUTO.

To the Editor of The Homestead:

My car is a 1912 model five passenger car weighing 3,200 pounds and was bought May 18th last. Up to the present time it has covered a distance of 4,658.6 miles and I have gotten fifteen miles to each gallon of gasoline which costs fifteen to seventeen cents per gallon. I have used two and one-half pounds of hard oil at fifteen cents per pound and eighteen gallons

of cylinder oil at sixty-five cents per gallon. Cylinder oil is used in the transmission. The crank case and oil reservoir are drained and cleaned each 500 miles.

I use the Prest-o-lite gas and so far have used five tanks at a cost of $2 each, also recharging storage battery three times, $1.50. It is used for side and tail lamps, horn and starting.

The car is equipped with 36x4-inch tires and have had no tire trouble and only one puncture. Have had no kind of repair work done to the car yet. My boys take care of it and we have ground the valves twice ourselves. We think this is cheap riding as the car goes through all kinds of weather.

Atchison county, Mo. B. J. Jones.

CORN SHOWS OUT OF DATE.

To the Editor of The Homestead:

During the past few years much has been written on the subject, corn. The farm journals have filled their columns with reports of corn shows coming and gone, the winners have had their "pictures taken" beside the winning ears. Farmers everywhere have been urged to emulate the example of so-and-so of such-a-place, who won a silver cup with ten pretty ears of corn.

By inference farmers have been told to go and do likewise, that is, get some seed of the prize-winning strain. Surely, if it won a prize it must be better seed. All of which is all right in a way. I haven't any great fault to find with the corn shows, or the corn that wins at them. They were a necessary evil in their day.

Corn shows were all right when it was necessary to do something more or less sensational in order to awaken even passive interest in corn improvement. But after interest is awakened the corn show has fulfilled its mission, and should be abolished. Its awards are misleading, and throw men off the right track rather than leading them into better knowledge.

We are ready for a great forward step in corn improvement work. I dare any sincere corn improver to refute what I shall state in the following paragraph.

Because in the ordinary corn show judging the standard of comparison is beauty of form and utility from the market standpoint, solely, false ideals and false values are created by premium awards. I have seen sweepstake ribbons tied to ears which would have tested 50 per cent weak sprouts, and were unfit in every respect to be called seed ears. I have tried out show ears in my test plats, and found, even when vitality was good and a good stand obtained, that the yield was low, a large percentage of the stalks were barren of ears, the stalks were weak, and broke easily, and the general returns from the winning ears far below those from less favorable ears which possessed more real utility.

The seed tester has obviated the need of planting weak vitality ears, because their appearance was good. It remains for seed corn improvers to weed out low yielding ears, which are inherently low yielding as I have proved in my tests time and again, and really begin improving corn by paying less attention to type and more attention to utility, which is measured accurately by most bushels of sound corn per acre.

If corn contests are to be held, let it be for the highest yield from a given acerage, instead of the ten prettiest ears the grower was lucky enough to find. Then and then only will the awards stimulate growers to dig for real utility. More can be done in one year, by individual ear testing for yield, to improve the corn yield of the corn-belt states, than has been accomplished in ten years of shows, accompanied by a hullabaloo about uniform type, color of grain, dimple or pinched dent, etc. C. Ray Moore.

Ringgold Co., Iowa.

In the future our beef supply must come from our farms. The ranches are being cut up and sold for small farms. Why not raise a few beef cattle each year to consume the surplus hay and grain crops?

Pigs and peanuts make a good combination and they are adapted to most farms in this country. Give them a trial this year.

LAND AND HOMES FOR SALE

FOR SALE
DIRECT FROM OWNER

194 ACRES. One of the best and most highly improved and productive up-to-date farms in Indiana. Eleven-room house, cellar, hot and cold water, bath and acetylene lighting plant. Large new barn, cribs, granary, and one of the best and most sanitary hog houses that can be built. All cleared and in high state of cultivation but 20 acres and that is a fine woods pasture. Three good wells, cement tanks and water pumped with engine and one windmill. No stumps, no waste land. Three miles to two good towns, 1½ miles to traction stop. On macadamized road, rural route and telephone. Can raise 100 bu. corn per acre, good seasons, and anything else grown. Have cut alfalfa four times per season. Reason for selling, health. Price $125 per acre. Easy terms. Reference, H. E. Browning of The Homestead, as he has been on this farm and has seen corn that made 100 bushel per acre. Address

Geo. W. Bolds - Bryant, Indiana.

SOUTHERN MINNESOTA LAND BARGAINS.

I HAVE a finely improved farm of 280 acres, tw miles from good town, only 18 miles north of Iowa line, at $85.00 per acre. $2,500 cash will handle this fine farm—and it certainly is a fine one. Also have a fine farm of 320 acres at $70 per acre, and one of 400 acres at $75.00 per acre. Any one of these are worthy of your consideration.

11 sections of selected prairie land in Lincoln county, Colorado, at $9.50 per acre. This tract will make a fine colonization proposition.

18 sections in Billings county, North Dakota, in a very fine stock ranch with good buildings. Northern Pacific Railroad runs through the land. Will sell at $5.00 per acre. Small cash payment. Balance to suit at 6%. The coal alone on this land is worth many times more than the sale price of ranch.

In Wisconsin I have some very fine cut-over lands that are suitable for dairying. Finest water in the world. Greatest tame grass country in the United States. Lands are near markets and will sell at $7.50 to $10.00 per acre, upon your own terms. A small cash payment will secure you one of these tracts. Write for information concerning any locality you may be interested in. **Geo. R. Slocum, 601 Pioneer Building, St. Paul, Minnesota.**

CLARK COUNTY, WISCONSIN

VIRGIN land, easily cleared, good soil, healthful, climate, adequate rainfall; roads, churches and schools, creameries and markets; all conveniences of a well-settled, prosperous community.

$18 PER ACRE

On terms to suit you. Monthly payments of $12.50 if desired. Special bargains for those who buy before spring. Write for full particulars to

WEST-CANNON-BISSELL COMPANY, 97 Wisconsin St., Dept. H, Milwaukee Wis.

WE WANT YOU to know about the greatest section in the irrigated West. Richer soil cannot be found anywhere; climatic conditions, railroads, churches and educational facilities are the best; in fact this is a section possessing all the advantages of a populated community and none of the hardships of recently reclaimed districts. Here is opportunity for the farmer, dairyman, orchardist and investor. Write for literature that will open your eyes to a great and growing country. Mountain Home Co-operative Irrigation Co., Mountain Home, Idaho.

COME SOUTH

200 ACRES convenient to Birmingham and Gadsden; 90 in level, fertile fields; five-room dwelling, barn and tenant house; pike, R. F. D. and telephone service; ¾ mile to station; 800 twelve-year-old apple trees, bearing; grape, pear, fig, E. walnuts. Price only $4,000. For full particulars of this, as well as many others, address

SID L. BEASON
"The Land Man." Whitney, Alabama.

OWN A FARM IN TAYLOR COUNTY, WIS.

GREAT dairy county. Prices $10.00 up; 10 yrs. to pay. We are OWNERS. Improved and unimproved. Values rising steadily. Safe, sure, large returns. Get table of crop yields from gov't. records Sample bargain—120 a., well located on main traveled road, 15 a. clear, some good timber on bal., frame house and barn. Price $22.50 per acre. We sometimes take in desirable property in pt. pyt. of a farm. **Loeb-Hammel Realty Co., Box B, Medford, Wis.**

LOCATE near the great markets. 190-acre farm in fertile Mohawk valley. Surface rolling; gravelly; clay loam; well watered; good buildings, sheltered; summer and winter silos. Usually keeps from 25 to 30 milch cows besides horses and young stock and sells hay. Some alfalfa, enough woodland. $40 per acre. Price about enough to replace buildings. Poor health. P. H. Elwood, R. 3, Fort Plain, New York.

POSITIVE EVIDENCE For U. S. Census figures of yields in Wisconsin's cheap land districts write us. We have no lands to sell, but will tell you what lands are available, what they produce and, if you desire, will tell you the owners. Wisconsin Advancement Association, 331 Caswell Block, Milwaukee, Wisconsin.

FOR SALE

200 ACRES of good, level land; 150 acres tillable, balance wood and pasture; good buildings; 3 miles to good town. Price $6,000. Send for list of Cayuga county farm bargains. **J. H. Vanden Bosch, 53 Genesee St., Auburn, New York.**

AUCTIONEERS

LET us sell your farm and other real estate at auction. We are making successful sales for others. CAREY M. JONES & CO., Auctioneers, 2856 Washington Blvd., Chicago, Illinois.

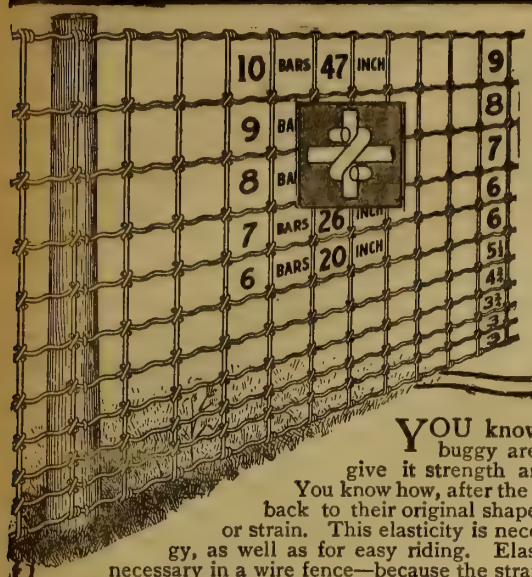
FOR SALE Good 200-acre, level, rich soil, imp. farm in Wisconsin; ¾ mile to high school, 2 railroads and creamery. Gold mine for the right man. Address L. B. 5, Necedah, Wis.

Elastic Tension



How It Adds Years to the Life of Farm Fences

YOU know why the springs on a buggy are bowed—don't you? To give it strength and elasticity—springiness. You know how, after the strain is released, they fly back to their original shape, ready for the next load or strain. This elasticity is necessary to the life of a buggy, as well as for easy riding. Elastic Tension is even more necessary in a wire fence—because the strains are more sudden; heat and cold contract and expand the wires, and if the fence does not give and take it soon becomes baggy, saggy, and goes down. That's why you see so much wire fencing sagged—it lacks the proper elastic tension. In

SQUARE DEAL FENCE

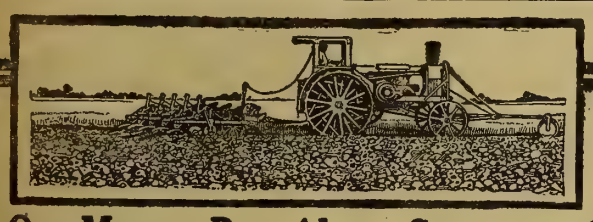
(The Kind That's ALWAYS Trim and Tight)

we have solved this important problem on the same principle as the buggy spring. Note the Wavy Strand Wires which form the "springs" in SQUARE DEAL Fence. These furnish the give and take caused by sudden strains, heat or cold. They are further strengthened, stiffened and supported by the one-piece Stay-Wires which go from top to bottom—making a fence that is unusually rigid, yet **elastic** enough to relieve the undue strains and thus **prolong** its life many years, at the same time keeping it **always** tight and trim. That's why SQUARE DEAL Fence lasts longer, is cheaper, looks better and gives such universal satisfaction.

Write for Catalog, Prices and Free Folding 2-ft. Rule

A postal brings all, postpaid, by return mail—also our nearest dealer's name. Send today, and get posted on the fence that ALWAYS STAYS tight and trim.

THE KEYSTONE STEEL & WIRE CO., 417 Industrial St., PEORIA, ILL.



One Man or Boy, Alone, Can Run This Avery Plow Outfit

You don't need any plowman with an Avery "self-lift" Engine Gang. The plows are handled **entirely by power taken from the plow wheels.** Pull a cord at the ends of the furrows and the plows lift out of the ground—turn around, pull the cord again and they drop back in.

This wonderful Avery "Self-Lift" Engine Gang puts all the Hand Lever Plows all out of date. **Saves** you the wages and board of a plowman. **Saves** you all the **hard, back-breaking work** of lifting and lowering the plows by hand levers at the end of each furrow.

And with an Avery "Self-Guide" attachment you don't even have to touch the tractor steering wheel from one end to the other. Just sit there and watch the outfit run. **Plowing is certainly play with an Avery "Self-Guide" Tractor and "Self-Lift" Plow.**

AVERY "Light-Weight" Tractor and "Self-Lift" Plow

Make More Money By Power Farming Like Others Are Doing

Power Farming with an Avery Outfit is a Proven Money Maker. Definite cost records kept by owners prove a saving of **half and more** of the expense of horse plowing, also a big saving in harrowing, discing, seeding, harvesting, hauling, grading and other work. You can raise **bigger crops** by tractor farming—**plow deeper** and do **all your work better** and at **just the right time.** Also save hard work for yourself and make farming more interesting for your boys.

You can get an Avery Outfit to fit **any size farm**—12–25 H. P. Tractor pulling 3 to 4 plows and plowing 10 to 12 acres per day, for small farms—20-35 H. P. pulling 5 to 6 plows and plowing 15 to 18 acres per day, for medium size farms—40-80 H. P. pulling 8 to 10 plows and plowing 25 to 30 acres per day, for large farms.

Get Tractor Farming Facts, Free

Learn the facts about **Tractor Farming.** The Avery Tractor and Plow Book tells you about them. Also tells about the wonderful **"Light-Weight"** of Avery Tractors—the 12-25 H. P. weighs less than 7,500 pounds, the 20-35 H. P. less than 11,500 pounds, and the 40-80 H. P. only 20,000 pounds. Shows why they are the **simplest Tractors built.** Explains all about the **Avery Mutual Benefit Selling Plan** of **Sold on Approval Terms, Strong Guarantees** and **Low Prices.** Write—get all the facts—ask for Avery 1913 Complete Tractor Book with Power Farming Facts, full information about Avery "Light-Weight" Tractors and "Self-Lift" Plows and the Avery Mutual Benefit Selling Plan. Address

AVERY COMPANY, 1265 Iowa Street, PEORIA, ILLINOIS

Also manufacturers of Avery Steam Traction Engines, "Yellow Fellow" Grain Threshers and Gasoline Farm Trucks.

"Can't Sag" Gates Save You BIG MONEY

Cost only one-third as much as ordinary iron, wire or gas pipe gates, but last twice as long. Neat in appearance—best and strongest gate made—light, easy to handle, opens both ways. Boards are double *bolted* between eight angle steel uprights and double truss braces. *guaranteed never to sag.*

Cost Less Than All Wood Gates—Last 5 Times as Long

Can't Sag Gates are furnished complete, ready to hang, or just the Gate Steels which include everything except the boards. Patent self-locking hinge feature—reinforced two piece malleable hinges. Six Triangular Truss Braces make gates extra strong.

Improved Elevating Attachment permits the gate to be raised full length from 5 to 30 inches, so small stock can pass under, and to swing over snow.

Alvin V. Rowe, Pres.

30 Days Free Trial and 5 Year Guarantee

Catalog shows both complete Gates and just the Steels, at prices you can't afford to miss. Send for my new catalog with free 30 days' trial and *freight prepaid offer.*

"Can't Sag" Gates & Steels

Live Stock Insurance.

By James H. Murphy.

THE loss of a single well-bred and registered animal may mean the loss of hundreds, or in some cases of thousands of dollars, and to farmers in moderate circumstances such a loss is almost irretrievable. Such an animal is hard to replace without a big cash outlay, and in the case of a breeding animal, its death removes the source of a considerable income upon which the farmer is depending. Farmers in this country have been accustomed to certain very limited lines of live stock insurance, but the subject has not been thoroughly covered, and it still remains for some enterprising company to advance a live stock insurance schedule, which, while reliable, will be cheap enough to appeal to any breeder of fairly good stock.

We have never attacked the live stock insurance problem with anything like European completeness. In these older countries, live stock insurance has been developed to a degree that amazes the average American. A large percentage of their farmers are so near the margin, that the loss of an uninsured pig is a serious matter. To a man who has only a few acres and a horse and a cow or two—a loss of one of these large animals, it has been claimed, may mean life-long financial embarrassment. He cannot easily recover from such a disaster, but which to meet his American brother need only to apply a little industry. Under the spur of such conditions Europe has tried almost everything from the local mutual life insurance company to the great state-aided ventures. Their experience may afford us untold aid in devising a plan of live stock insurance which will be equitable and reliable.

In the Union Stock Yards at Chicago a premium of ten cents per car load is charged to provide fire insurance. This sum is turned over to a large eastern insurance company, which becomes liable to owners for loss or damage by fire to cattle, hogs, sheep and goats, while in the yards. Important as this project may be to the man who markets directly in Chicago, it is of no use to the average breeder or stockman, and at best covers but a brief period in the life of the insured animal. In Indiana live stock insurance has been developed to a point of greater utility than in many sections of this country. Policies of the company operating in this state cover death losses from any causes, and the premium rate is moderate, based upon the age and value of the animal. An average age limit of twelve years on horses, and eight years on cows is fixed in order to protect the companies from losses due to death of animals from natural causes accompanying old age. As yet, however, the idea of live stock insurance has not been as universally adopted as it deserves. Only the breeders and owners of exceptionally valuable stock have taken advantage of it, and until it becomes general among breeders and stockmen it cannot be sold nearly as cheaply as its popularity would require.

In the dairy sections of our country where high production greatly increases an animal's value for breeding purposes, live stock insurance would be a great boon to those men who desire to breed good animals, but due to the chances of loss they are very reticent about investing in good foundation stock. If they could purchase and then insure one or two good animals, it would be a big incentive toward starting right and building up a high-class herd, instead of the scrub pure breds now too often seen. Young men would more willingly invest in pure-bred mares, if insurance could be obtained to prevent them from loss in case of accident or death of the animals.

Live stock insurance in this country is in its very infancy and while it is a new subject, it is a very vital one, intimately connected with the raising of better stock, and of their universal dissemination among the farmers. Action in the matter, however, must be taken by some reliable company or the state, in order to make the venture a success, and there should be a big future for such a venture.

Soy beans will become one of the most important legumes when its advantages are better understood. Try soy beans.

Factors in the Cost of Living.

THE average price of commodities has risen steadily since the latter part of 1896. During this period the prices of nearly all commodities, especially food products, have steadily advanced. A few articles have fluctuated, but have had little influence in changing the general trend upward. In the ten-year period immediately preceding this there was a steady fall in prices which reached their minimum in 1896. During this period the standard of living has constantly increased making an additional burden upon people, whose incomes are fixed, or who have been unable to increase their income in proportion to the cost of living.

The high cost of living has been caused by the attempt to meet the demands of a high standard and the constantly advancing prices. The latter is the chief cause.

It is necessary to discriminate between the cost of living arising from a higher standard and that arising from high prices. The former is sometimes called "the cost of high living" and the latter "the high cost of living." The former means that we have a better and more varied life for which we pay correspondingly. We have better schools, school equipment, better churches, better homes and better furniture and better clothing. We have telephones, automobiles, electric lights, paved streets, rural mail delivery, conveniences of shop, home and market and a hundred other things that we must pay for if we live the ordinary life of civilization. It is all very well if the income keeps up with the demand. On the other hand advancing prices of nearly everything have caused humanity to hustle to keep the pace. Prices have increased about fifty points in the last ten years and are still going up. There is no immediate relief in sight, especially in food products.

The causes are many and complex. They should be divided into world causes and local causes. Chief among the former is the expansion of currency caused by the production of gold and the lessening of the purchasing power of gold. Our unit of value measure, the gold dollar, is growing smaller and it takes more of them to measure the value of a given article than formerly. Moreover, this makes an expansion of business somewhat fictitious in nature. But it causes great activity, and a dollar travels faster now than formerly—which intensifies the power of the volume of money to raise prices. Add to this the effect of credit shown by the large bank deposits half of which, in this country, are checking deposits and we have another factor in the inflation of prices.

The second great world cause is the shifting of the population from the group of producers of raw material to the group engaged in transforming, transporting and distributing products, and to the group who are attempting to satisfy the demand for multitudes of desires old and new. Add to this the increase of population in cities the relative decrease in agricultural products to feed them and we have the chief causes for the advance of world prices.

Local causes in the United States have been influenced by the relative scarcity of food products. The number of acres in agriculture has not increased as rapidly as the demand for food products. This condition is intensified by the depletion of the soil and the decline in the yield per acre. The prices of food products have been so high as to effect prices of other commodities by sympathetic action.

The imperfect and expensive machinery of getting the product to the consumer has added greatly to the cost. The difference between the price of the product at the farm and at the door of the consumer is too great. Simpler methods of distribution are needed.

The tariff has had something to do with the advance of local prices although its influence has been greatly overestimated.

Trusts, combinations, produce associations, cold storage and other business organizations that have had power to restrict production, control the output or fix prices within certain limits have helped to raise prices.

The cost of living has been advanced by extravagance, waste and the lack of economy of consumption. Waste of energy and money brings want of energy and money. High prices are not necessarily an evil in themselves. A level of high prices is as safe and sound as a level of low prices and in some respects much better. Only the income must correspond to the price. Suddenly shifting prices are detrimental to all classes and ruinous to many. If the necessary cost of living advances 50 per cent and wages and salaries but 25 in the same time distress must follow.

It is difficult to suggest positive remedies that are scientific and can be made practical, but the following are given:

1. Let the government check the decline in the purchasing power of gold by taking automatically seigniorage of the bullion that is behind the dollar, thus leaving the value of the dollar stable and allowing the weight to rise or fall in correspondence with the rise and fall of average prices.

2. Induce if possible more people to engage in the production of raw material.

3. Introduce scientific intensive agriculture in order to double the production per acre.

4. Revise the tariff by a scientific treatment which will eliminate present evils.

5. Prevent as far as is possible organizations from advancing prices arbitrarily. Place a maximum limit to prices if necessary.

6. Introduce simpler and less expensive methods of bringing the commodity to the consumer.

7. Finally, educate people in the principles and habit of true economy, thus doing away with extravagance and waste.—[Prof. F. W. Blackman before Kansas Board of Agriculture.

Keep the salt in a sheltered box in the sheep pasture. Spasmodic salting is very dangerous.

INSERSTATE FARMERS' AND BREEDERS' ASSOCIATION.

(Continued from page 28.)

portations are practically negligible, and in a few years we will be importing ourselves, unless something is done to increase the supply. This country differs from those abroad for where the laboring man there seldom eats meat, in America he has it often on his table. There is a bright future for the meat grower. The natural conditions here are the best in the world, and we have not begun to reach the possibilities of the land. As to the sections where the meats will be grown most people are beginning to look to the middle West, where the best foods can be grown on the farms where the feeding will be done. It will mean better farming and the use of much that is now being wasted, but the market will always be good if not perhaps always as high as now. The farmers are urged to remember the viewpoint of the consumer when thinking of the prices they expect.

In his investigation concerning beef production, Prof. H. R. Smith, of the Minnesota Agricultural College, has been testing rations for many years, but finds that the profits depend about equally upon the animal itself and the ration. It was found that the most profitable and cheapest producing ration was a combination of the corn plant and some legume. Experiments are not yet conclusive as the comparative merits of silage and corn fodder, though recent ones indicate the economy of the silo. In all the feeding experiments there was so much difference between individuals that Professor Smith decided to investigate the "Relation of Conformation to Gains in Beef Cattle." In a series of lantern slides the various types were thrown on the creen and the audience given an opportunity to select from the groups the steers they considered the best feeders. Later the steers in finished condition were shown in the same manner and figures showing which had been the most profitable given. In stating his conclusions Professor Smith said that often a rough steer with great capacity was a more profitable one than a more fancy one with more quality, because of the difference in cost at the beginning of the feeding period. Of the various measurements taken the size of the middle girth seemed most indicative of feeding capacity and profitable feeding qualities. In selecting steers attention should be given to depth and width of body and to a short, wide head because it is so closely associated with depth and width in the steer. These qualities go with the most profitable feeding steer.

PROVES THAT DAIRYING IS PROFITABLE.

(Continued from page 3.)

condition. During the past year he has laid five miles of four-inch soil drain under his pastures and crop fields, and now has twelve miles of drain pipes under his farm. He now owns 440 acres, but the last purchase of nearly 100 acres has not been cleared or under-drained and that work will be done during the coming season. Before he started to farming, the manure disposal proposition in Carthage was an expense to the owners of cows and horses, but as soon as enough of the farm was cleared of rocks so a wagon could operate on the ground, Colonel Phelps purchased three manure spreaders and offered to haul free of cost all the manure he could obtain in Carthage. He has kept the three wagons busy hauling manure and during the last two years has spread 8,000 loads of animal-made fertilizer on his farm, raising some of his land almost six inches above the former level. During the past season his wheat crop averaged forty bushels to the acre, and some of his alfalfa cut nine tons per acre in four cuttings. The farmers in that neighborhood have seen the value of using fertilizer, and now they are bidding against each other for the manure from the larger barns in Carthage. With his large dairy herd and the pigs he feeds, Colonel Phelps can now raise on his own farm nearly all the fertilizer he will need and he is letting the other farmers get a share of the fertilizer in town.

The dairy business in the community has also shown remarkable growth. The creamery started on June 1, 1912, and during the first month made less than 2,000 pounds of butter. At present the creamery is making 500 pounds of butter a day, with a maximum capacity of 1,200 pounds of butter per day and they are beginning to plan for enlarging the plant as several wealthy men in town are planning to establish dairy farms in the vicinity. The creamery owns an automobile truck which travels thirty miles a day, making collections of cream on a regular schedule. At present the creamery is paying twenty-seven cents per pound for butter fat. A large distributing dairy in St. Louis recently offered Colonel Phelps five cents a pound premium over the market price for his cream, to be shipped to St. Louis, knowing that the additional cost could be made up in the quality of cream they would obtain and in the advertising they could get out of handling the product of his dairy, but he is loyal to his home town and its industries and would not consider the offer.

The Kansas senate committee on live stock has introduced the bills to regulate the Kansas City Stock Yards. The bills are practically the same as those introduced in the Missouri legislature. They apply to all stock yards of the state. One bill provides for the appointment of a stock yards inspector and the necessary deputies. The inspector is to have a salary of $2,000, and his deputies are to be paid $1,800. The other bill provides that the inspector is to have charge of the weighing and inspection of all the hay, grain and other feeds sold to stockmen by the stock yards companies.

Where Do *You* Stand On This Sugar Tariff Question?

DO YOU want the American beet sugar industry **destroyed?** Do you want to wipe out a growing industry—one of the very few that are of direct benefit to American **farmers?** Do you want sugar prices **controlled by a trust?** Do you want the price of sugar **raised?** Do you want to enrich a few sugar importers and support foreign laborers at the expense of American farmers, workingmen and manufacturers? Or—do you prefer a FAIR DEAL TO ALL—fair prices, regulated by supply and demand only—the building up and encouragement of a rapidly growing industry that benefits thousands of American farmers.

Removal of Tariff Will Benefit Only the Trust

Importers of foreign sugar, dominated by the **Sugar Trust,** seek to have the tariff on sugar **lowered or removed,** which if put into effect means that the American beet sugar industry will be completely **crushed** and the revenue-stealing trust will absolutely control the sugar situation. They will lower the price of sugar temporarily until the beet sugar industry is **annihilated,** absolutely wiped off the map—then watch the price of sugar soar—up! up!! up!!!

Read this brief paragraph from U. S. Senate Document No. 890, which tells the story in a nutshell:—

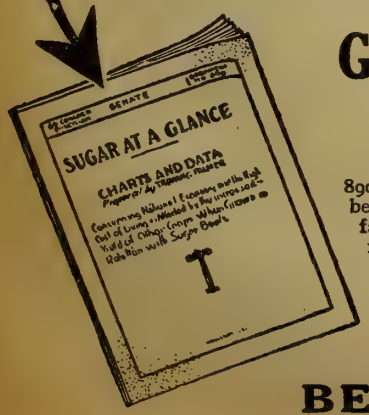
"Knowing that with the prevailing high wage rate of the United States, sugar produced in this country could not compete with the raw sugars they purchase from low wage rate countries, unless a reasonable duty were imposed upon such sugars, the American refiners of foreign raw sugar are expending large sums of money in an effort to obtain free raw sugar from foreign countries, which would destroy their only competitor, **after which they could raise the price of sugar at will.**"

This Is Important to You—Act Promptly

It is up to you to take a positive stand on this sugar tariff question—and **at once.** By prompt, energetic action **you** can help hold this great American industry for the American people. By **delay** or **neglect,** you will assist sugar monopolists to **crush** the great beet sugar industry of America, their only competition. You will enable the Trust to gain absolute control of the sugar supply, and exact heavy toll on every pound of sugar sold to **you** and to the millions of other Americans.

Do **you** stand for any such tyranny? If you **don't,** then **enter your most vigorous protest against the lowering of tariff on sugar**—and do so **at once!** Write your congressman today, explaining that you are opposed to any reduction of the tariff on sugar. Don't delay—do it now.

We appeal to you on behalf of the thousands of American farmers who grow sugar beets, the manufacturers who make beet sugar, and the thousands of American workingmen employed in sugar factories. Don't put this matter off—it's too important.



Get This Valuable Free Book —Mail Coupon Now

We want to send you, **free,** a copy of U. S. Senate Document No. 890, entitled "Sugar at a Glance." Just fill out and mail the coupon below and the book will be sent you free. This book gives you all the facts about the sugar industry; it also tells how you can increase the fertility of your land by growing sugar beets. Get the book now—you can then judge the case clearly and help build up the beet sugar industry of the United States by following the plan outlined to you. Fill out and mail the coupon **now,** before it gets lost.

Folks Who Know the Facts Never Hesitate to Pay the Price for Clean, Reliable Flour

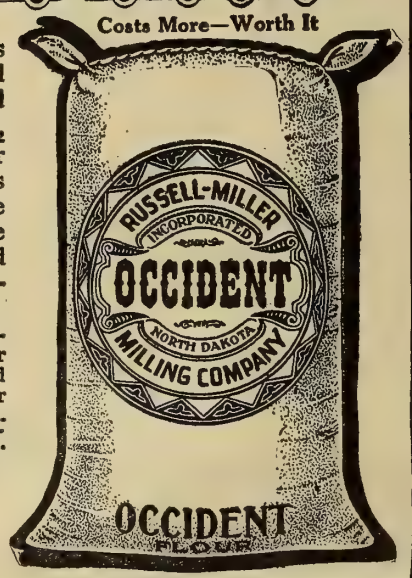
Every housewife knows it requires more time to keep the house strictly clean than partly clean. It requires more time, more people and more scientific machinery to make OCCIDENT Flour the cleanest flour you can buy. In the crease of every wheat kernel dirt lodges. Unless this dirt is washed out it goes into the flour and into your bread. We wash and scour every wheat kernel used in OCCIDENT Flour. The entire OCCIDENT milling process is the most thorough and costly in use. Yet you pay only a few cents more for this extra cleanliness.

The Guaranteed Flour

OCCIDENT

Costs More—Worth It

will give you bread which stays fresh and retains its good flavor much longer than bread made from partly clean flour, because the cleaner the flour the longer the bread keeps fresh and sweet. Thus the housewife can bake a double batch and save the work and fuel expense of several regular baking days each month.



Every sack sells on a Binding Guarantee to give you better results for all baking—bread, biscuit, cake and pastry—than any other flour, or your money refunded without question. Try Occident on our Guarantee.

Send for our Free Booklet, "Better Baking."

A Mighty Worker for Farmers.

Here's the strongest, most reliable and lowest-priced "farm-hand" known—a French Dry Battery. Ever ready to work at the pressure of a button or a twist of the wrist, this mighty worker saves hours of time, miles of steps and lots of money for every farmer using it. With a few French Dry Batteries the power, convenience and luxury of electricity is at the hand of the *whole* family *all* the time.

FRENCH DRY CELLS

Think of having the wonder-working power of electricity "on tap" all the time! Father instead of fussing with a dangerous kerosene lantern in the dark barn now simply presses the button of an electric flasher. Mother doesn't stumble down the dark cellar stairs risking life and limb any longer. She "switches on" a light at the head of the steps and goes her way in safety.

A telephone between the house and the barn is a great convenience. Try it *once* and you'll never be without it.

The mail-carrier can press a button on the mail-box way out in the road which rings a bell in the house telling the folks that there's some mail in the box. These and dozens of other helps are yours with French Dry Batteries.

Special Purpose Batteries

French Dry Batteries are *special* purpose batteries, built for a *special* job. Thousands of auto owners insist on the French "Auto Special"—the dry-cell battery with the *blue* label. The *green* labeled French Telephone cells are for all household uses.

'Ware of Imitations

All good things are copied. Insist on the *genuine* French Battery—the dry cell with an army of satisfied users. Poor-quality batteries give small, weak sparks for a short time and then "peter out" entirely. Don't take chances! Your dealer will tell you the particular French Battery you need. If you want to know more about these wonderful French Dry Batteries and how they can help you do your farm work, send your name and address on a postal. (4)

WITH THE EDITOR.

(Continued from last week.)

Constance Baines had been Constance Povey for several years, commonplace, humdrum years they were as pictured by historian Bennett, when the horizon of life was unexpectedly enlarged for the Poveys by the advent of a baby. This baby pushed everything else on to another plane and brought a new element into the relations of the hitherto entirely united Constance and Samuel.

Samuel Povey was as utterly devoted to his child as was his mother whose thoughts were busy with her babe every waking moment of her life. Cyril was the pivot of the house, every desire of both Samuel and Constance ended somewhere in Cyril, but while the parents were agreed in desiring the best things for their child they were not always of one mind as to what the best things were.

When Cyril was still but a few months old there came a conflict of their wills. They were agreed that the child must be taught self-control from the beginning, but Constance could not bear to hear the wailing of her baby crying for his mother after he had been tucked away for the night, and Samuel would not permit the child to be pampered. A more serious situation was precipitated by the boy's naughtiness at a party when he was not yet five years old. His father decided on that occasion that it was time for him to discipline his son. "That night Constance could not sleep. As she lay darkly awake by her husband, her secret being seemed to be a-quiver with emotion. She said that Samuel was right, quite right. And then she said that the poor thing was not yet five years old. The two had to be reconciled. And they never could be reconciled. Always she would be between them to reconcile them, only to be crushed by the impact. Always she would have to bear the burden of both of them. She could not change Samuel; besides, he was right. And though Cyril was not yet five, she felt that she could not change him either."

As the years passed there were other such times; and always the mother heart in an attitude of defending her child; always the father heart feeling it must be stern for the boy's own good. No one but a close observer of boys and their development could sketch Cyril Povey as he is presented in "The Old Wives' Tale," no one but a parent could so tell the story of the marked coin which proved that Cyril had stolen money from his father's till. The morning of the discovery of this fact was one never to be forgotten. How the father and mother lived through it and how, gradually, it faded into the background of memory and their son once more became their pride and their darling one must read the story to understand.

There came a day when the lad carried off some special school honors, honors which seemed to indicate that the boy was possessed of unusual abilities. On the evening of that day husband and wife had a long talk. "The face of Constance said to her husband: 'I've always stuck up for that boy in spite of your severities and you see how right I was.' And the face of Mr. Povey said: 'You see now the brilliant success of my system. You see how my educational theories have justified themselves.'"

Not the least illuminating chapters of the story are those dealing with the relations of mother and son after the death of the father, which occurred when Cyril was about thirteen. One feels that these relations as reported are typical. A single incident will serve to illustrate.

Cyril had expressed a wish to go to the school of art after the holidays, but his father had decided against the project. The boy had apparently yielded, but shortly after his father's funeral he calmly announced that after Christmas he intended to enter the school of art. His mother

reminded him of what his father had said and added that he must give up the idea. The boy at once began to pout and sulk; he would not listen to reason; he accused her of harshness; he gave up drawing entirely. It was war between them. After several weeks of unhappiness the mother yielded. The war was over. The boy was charming again. And the mother said to herself: "If we can be happy together only when I give way to him I must give way to him. After all perhaps it is very important that he should go to the school of art."

Children are quick to discern. Before three months Cyril Povey, not his mother, was head of the house. Fortunately the lad did not become dissipated—his tastes did not incline that way—he did become thoroughly selfish and careless of his mother's comfort and happiness. As the years passed Constance Povey was compelled to admit to herself that Cyril was not a good son. It does not seem to have occurred to Mrs. Povey that her training was in any way responsible for Cyril's defects of character, neither does the author suggest it, except it be by holding a mirror up to the family life which formed the lad's environment.

The eye sees what it brings with it the power to see, although the canvas is painted in dull browns and depressing grays. The "Old Wives' Tale" should prove a profitable study to parents.

AMONG OURSELVES.

Warm as is our welcome here "Among Ourselves" to newcomers we give an even more hearty greeting to old friends like Mrs. O. E. Osborn, who has first place upon this program:

I have been one of the silent, though appreciative, readers most of the time, though have occasionally sent a letter to the Home Department. When I first started reading this department a lady from Wisconsin, I think her name was Velma Caldwell, was editress. Some of the names of those times I remember and enjoyed reading were Mrs. Vanderhoef, Mrs. Alice Aul, Margaret Flindt, Mrs. Bertha Engle and Flora Wood. Some of these, I know, have since passed

"The City Man Has No Monopoly on My Light"

Says ***BILLY BULB***

"Electric Light is just as applicable to the isolated farm as to the city home—and there's no light that's so safe, dependable and convenient. **You** can get the benefit of my light on **your** farm, no matter where it is, by installing an Individual Electric Lighting Plant. These plants are simple and inexpensive. They consist of a small gas engine, a dynamo, a simple switchboard and the famous storage battery called the

"Chloride Accumulator"

This battery makes your light ready on the instant, any hour of the night or day, without the necessity of running your engine. By simply using your engine and dynamo in connection with it for a few hours (whenever most convenient) it stores up and retains—puts on tap, so to speak—the electricity. All the rest of the time you can use your engine for other farm work, safe in the knowledge that your electric light is ready for use, only waiting the touch of your hand on the switch to send it flashing to any desired part of the grounds or buildings.

Learn more about the desirability of Electric Light for farm purposess. Write our nearest office for the book called Farm Lighting" and convince yourself Better write at once

over. There are a number of names whose writings I enjoy at present. Ninette Lowater, Eugene Secor, Mrs. Hulsers, whose picture we had recently, and a number whose names are not quite so familiar. I am glad that in these days woman's only sphere is not in the kitchen. Not that we should neglect our making of homes, and I would not go to the extreme of thinking there is any higher calling, but why not break the monotony by writing for some Home Department, working up a neighborhood club or of making your Sunday school class the very best in the school. These things are all worth while. By the way, we have a new country church that a town ought not to be ashamed to own, which we hope soon to have ready to dedicate. The women of our church not long since met to pull nails from old lath. Ten women and girls, armed with hammers, met. At noon a bonfire was made, coffee warmed and lunch served. By 3:30 o'clock the large pile had all been gone over and piled neatly for use, and we had enjoyed the day, besides doing what the men and boys were too busy to do.

Mrs. Osborn's reminiscent mood kindles pleasant memories in the hearts of other old-timers, while her interest in the new church and her plea for larger activities for women commend her to the younger women—in other words, we have all enjoyed her visit and all hope she will make another before long.

Our friend Mrs. Ferguson, of Nashua, Iowa, comes to talk to us about their water system, a subject which should be of interest to many of our circle:

We installed a waterworks system in our house which we built six years ago, and if less elaborate than in many homes we find it very convenient. The first cost has been our only expense so far, as we have not, as yet, paid out one cent for repairs. We built in one corner of our basement, which is 34x40, a cistern 8x16, using the outside wall of the basement for two sides of the cistern; the two inside walls are the same thickness as the outside, which is eighteen inches, but not as high as the outside walls, being left open about twenty inches from the ceiling, having also a window in one end to admit light when cleaning cistern. Near the top of the cistern we have an overflow pipe which discharges into the drain and about a foot from the bottom we have a faucet to draw cold water from and conveniently near is a hot water tank attached to the furnace, which makes it handy for laundry purposes. The water in winter is always boiling and supplies the first floor with hot water and the bath room on the second floor as well. Now, I hear someone say, "I should prefer to have the hot water tank heated by the kitchen stove," which, of course, has some things in favor of heating that way, as well as other things not preferable. One thing against it is the constant boiling of the water, besides its making the kitchen many degrees warmer in summer. However, we will leave it for each to do his or her own planning. Our supply tank, being in the attic, keeps water sufficiently warm for bathing, as all who have an attic know that there is no known place here below that is warmer in summer nor colder in winter. The supply tank is filled by forcing the water with a force pump. There are other ways perhaps easier, for instance, a gasoline engine or a ram, which should be installed when putting in the waterworks. We have open plumbing; that is, instead of running inside of walls they pass straight through and converge in a small toilet room off the kitchen, so that in case of accident the walls will not have to be torn up. The pipes, centering as they do in this little room, which has a seat and lavatory, but no bath, are out of sight as far as the rest of the house is concerned and are so situated that frost does not affect them in the least. The chimney, which is built from the bottom of the basement to the top of the chimney, may have something to do with the pipes never freezing, as it runs through the bath room and on one side, or directly against the chimney, is the pipe which supplied the cold water tank, while on the opposite side, similarly situated, is the pipe that feeds the hot water tank. Our bath room is in the chamber conveniently near the sleeping rooms which, I think, is as it should be, and yet, for one reason, I should prefer to have it downstairs. Then one could have the supply tank in the chamber and when raining it could be filled directly from eaves troughs and, by having an overflow trough running into the cistern, both are filled at the same time without labor. In having the tank in the attic it is above the eaves troughs and, as water has never yet been coaxed to rise above its source without assistance, that is the only reason why it is preferable to have the bath on the first floor. The drainage pool consists of an old stone well about 100 feet from the house and which is only partially covered to allow the escape of sewer gas. The four-inch iron sewer gaspipe attached to the drain instead of passing up through the roof, as in many houses, runs up by the side of the chimney to about two-thirds the height of the bath rooms, then goes into the chimney like a stovepipe. You all remember, perhaps, the old adage, "Anticipation is greater than participation." I have found by experience that there are four well-defined exceptions to that rule, which are the following: A baby, a telephone, a screened porch and a waterworks system. Try them and be convinced.

Going into detail as she does, Mrs. Ferguson makes her talk one of practical interest to those who may be considering building or putting water in the old house. A water system with sink and bath means so much to the family in both comfort and cleanliness that I wish we might hear from others and so stimulate interest and desire that the next few months would see an increased number of homes equipped with this modern luxury which is almost a necessity.

A friend who wishes to be known "Among Ourselves" as "Incognito," has some questions to propound:

I want to ask the Home Department contributors a few questions, because I

Spring Is Coming

You will soon be making more butter. Are you going to get top-notch prices for it?

High-priced butter is possible only with good cream and *good salt.*

It's the salt that brings out the flavor—and it's the flavor that regulates the price.

To get the *best* flavor, use Worcester Salt.

Worcester is pure, clean, sweet—has *not a trace of bitterness.*

Worcester is the perfect dairy salt. It will help you get top-notch prices

WORCESTER SALT

The Salt with the Savor

Worcester Salt is also best for hot cooking and table use. Its grain is fine and even.

For farm and dairy, Worcester Salt is put up in 14-pound cotton bags and 28- and 56-pound Irish linen bags. Get a bag from your grocer.

Send us your dealer's name and address and we will mail you free of charge, our booklet "Butter making on the Farm." Contains many valuable hints for dairymen

Free To Boys

I Have a Glove, Mitt, Mask, Ball, Bat, Cap and Belt for Every Boy Who Will Write to Me.

There are seven splendid pieces in this great outfit. The ash bat is a good one. The mask is made of heavy wire, full size. The catcher's mitt is thickly padded, very heavy and has patented fastener. The glove is of tanned leather and has patent clasp. The ball is strongly stitched and will last. A neat, adjustable belt and a dandy cap complete this great outfit. Remember you get the whole outfit of seven pieces for a little easy work. Write me today and I will tell you just how to get it.

A. M. PIPER, 304 Popular Bldg., Des Moines, Iowa.

When writing to advertisers please mention The Homestead.

do not know whom else to ask. Is it right for a man, a farmer in good circumstances, to hold the family purse and compel each and every member of the family to come to him for every cent? Is it right to keep several growing sons right under his thumb day and night, with never a holiday, never a vacation (even on Sundays, one might almost say), never a penny to spend except it comes out of "dad's" pocket; never a horse of their own to drive, always having to "foot it" or ride behind a clumsy pair of spavined draft horses, or else stay at home? Is it right that the daughters, grown women, must go to father and beg a nickel or a dime every time they want to buy so much as a packet of hair pins, or post a letter, or put a few cents in the Sunday collection? Or for these daughters, though doing their full share of house work, not to mention their unending labors in the family garden, the dairy barn or even the meadow at times—is it right that they can never at one time possess enough stockings, underwear and night clothes to feel that they are decently clothed, to wear hats (cheap ones, too) three years, and coats five and six, not because the family is poor, but because they do not care to beg for every penny and would rather do without? Is it fair that these young folks, living under the very shadow of the opera house, must be unable to say that they have never seen so much as one play on its stage, or one motion picture show? Or, when it happens that they have brushed up and mended their wardrobes, braved the inclemencies of the weather and the frightful state of the country roads, to the extent of walking a couple of miles to a neighboring party—is it right for father to go about the next day with a frown and an eternal lecture against the waste of time, the useless waste of energy and the fact that "them parties ain't goin' to put a cent of money in your pockets;" preferring, forsooth, that his young folks vegetate behind the kitchen stove the winter long, as he has done! Is it fair that the mother, like her children, can never have a cent of money to call her own—not even woman's portion, the "egg money"—but that John should carry the eggs to the store himself weekly and bring sugar, flour and coffee in return. Is it fair to compel Mary to ask even though she may always get it, to make her so dependent that she must perforce ask for a quarter to buy a set of cake tins or a tin dipper, when John, in his prosperity, need never think twice before marching to the store for a new ax, strap, shovel, halter, pitchfork and so on up to harness or manure spreader? Doesn't Mary earn her pin money as well as John does? Do not Mary, Jr., and John, Jr., and the rest of the boys and girls earn a right to a little spending money, a few good times, good clothes and driving horses? Then why does not Mary receive her pin money freely, without having to listen to John's kicks against her "extravagance, always beggin' for money" before she can wheedle out enough to buy herself a pair of cotton gloves? And why are not Mary, Jr., and John, Jr., and the rest allowed to live and have reasonable pleasures the same as are the children of their less prosperous neighbors?

These questions "Incognito" asks suggest a distressing state of family affairs. The washing of soiled linen in public is always an unpleasant proceeding, but sometimes public health is served thereby. With this hope "Incognito" was given place on our program. Will those who try to answer the questions make their replies as practical as possible. There must surely be some way out in a situation such as that suggested. Let us hear what it is.

It gives me real pleasure to give our old friend, Mr. A. L. Foote, place immediately following "Incognito:"

As I have been a reader of the Home Department for several years, and also a writer in several capacities, I was interested in Cousin Clara's thoughts on a wife having to beg for money from her husband, or even have him take her chicken money to buy tobacco and cigars, and I will add beer and whisky. You may call me a lawyer or a preacher or a common farmer, but I am glad I can plead "not guilty." Myself and wife have been married a little over one-third of a century, we are alone this winter the first time for thirty-two years, and I ask her every time I go to town if there is another thing she wants. And I write it down so I won't forget it. I have been asked many times who my partner was, when I have said, "We have certain things," and I have to say "my wife and children." I have many times wondered how a Christian man could keep himself steeped in tobacco, for when I promised God that I would be a radical Christian He made me give up the use of tobacco, and that was before my wife knew me. I have thought and said many times in the past year that the hardest job there is to do at the present time is to get people to do as well as they know. The best and easiest way for husband and wife to live is to be one, as God intended, for how can two walk together unless they are agreed. I think that the only right way for a family to live, whether they are rich or poor, is to all work together for the best interest of all the family and use the money as it is most needed for all the family. Also to pay for a good home. Myself and wife started poor enough, but we have raised a good-sized family and have a good farm home paid for. I worked in a good many homes as a builder of buildings for many years, and I believe it is generally the little foolish things and carelessness on the part of one or both that make the unpleasantness in homes.

It will be seen that Mr. Foote without referring to "Incognito" answers his questions indirectly, by stating underlying principles. After all, perhaps that is as good a way as any. At the same time let us hear from others.

Two of the friends come with requests both of which are made with view to summer needs rather than immediate necessities. Mrs. Emmetsbury asks me to ask where water glass is to be obtained and the method of its use in preserving eggs; "Inquirer" will speak for herself:

I enjoy the Home page very much and frequently find helpful suggestions. I would like to ask a few questions. I have been casting about in my mind to find something by which I could help out in the way of earning a little more cash than we usually get from chickens, early tomatoes and melons. We usually have a quantity of apples (early or summer ones that go to waste), also tomatoes after the early ones are sold. Would it be feasible to get a small canning outfit that one person could operate and use some of the farm products that would otherwise go to waste and make a little money at it? The fuel in this case is not in the reckoning. Can we not hear from someone who has tried something of the kind? Is the work hard to manage Of course, we have used the glass jars for our own use, but suppose we would use tin cans and hermetically seal them. If anyone has had any experience we would like to hear it, that we may know what to depend on doing.

"Inquirer's" query opens up what should prove a fruitful subject of discussion. The market for canned goods, both fruit and vegetables, is a growing one. Those who claim to know state that it pays better to can fruit and vegetables than to sell them fresh—except in the case of choice varieties which command high prices. If this be so canning ought to be a regular part of the farm industries. Is it? Do many of the friends own and operate small canneries? What does an outfit cost? How is the product disposed of? These are but a few of many points upon which we hope to receive information. And, as "Inquirer" asks, let answers come soon.

HOME AND HOMEMAKING.

LITTLE HELPS BY THE WAY.

But though fierce blow the winds through forests shrouded,
Where snows, for leafy verdure, cheerless cling,
Though seas moan wild, and skies are darkly clouded,
Within the heart that loves 'tis always spring!
There memories and hopes, fresh budding, throng,
And faith forgets that winter lingers long.

—Florence Earle Coates.

THE DIFFERENCE.

Have you ever noticed how small a disorder, how slight a dust or misplacement it takes to make a room look untidy and slovenly? If not, think about it now. Reflect upon the impression it gives you when you go into your kitchen and find the soiled spoon, the unwashed dish left there after the work of the day is done, and the place should be spotless. Don't you have an instant sensation of irritation and disappointment? The woman who has done this or who has left her stove littered with crumbs or spotted with grease, who has not brushed up the flour that has fallen beside the bag, undoubtedly thought that it made no difference, since she was going to give the room a good "ridding-up" the next day. Yet the disorder made all the difference between good and "sloppy" housekeeping. Apply the principle to the manner in which you conduct the care of your own room, your own clothing, your own sewing equipment, and see if, after all, the same truth of the advantage of keeping clean, rather than of making clean, does not run all through your homemaking.

THE WIFE.

He sees the wife, from slim, young comeliness,
With bearing of his children and their care
Grow stooped and withered, and the shining hair,
That was his pride, grow thin and lusterless.
Day after day, with wordless, pained distress,
He strives to ease the load her shoulders bear,
Lifting a burden here, a burden there;
Or offering some clumsy rare caress.
But, ah! her girl face never was so fair,
And eyes and lips that answered his desire
Are dimmed with sacred meaning to him now.
To his rapt sight an angel might aspire
To claim the stature of her soul, or wear
The halo that surrounds her mother brow.

—Anna Spencer Twitchell in Delineator.

A SMILE.

One day the children in a New York school were given a lesson about the cow. The next day a cocoanut was brought in for their inspection.

When the big nut came to Rosie Gold-

Electric Light For Farm Homes

At last the perfect electric light system!

A system which turns night into day! A system which lights your house, grounds and out buildings. Electric lights in any room; any place about a farm. Just the turn of the fingers and a brilliant light leaps out at any time of the night.

The Wonderful Universal System

The electric lighting plant which brings the same lighting comforts to the country home as are found in the city. Brilliant electric light cheaper than kerosene.

This plant runs only when you want it to run. You have electric light at any hour. You have as many or as few lights as you choose. No matter how many lights you burn.

GENUINE EDISON EQUIPMENT

The Universal Electric Lighting System is equipped with a genuine Edison equipment throughout—genuine Edison bulbs and other features approved by the great inventor. Absolutely no danger of fire. Don't delay, write for particulars. Think of what it means to have electric lights in your barn. No dangerous lanterns or lamps or matches. You can have electric light in your hay-mow absolutely without danger.

Write NOW—Today

You owe it to yourself to investigate at once the splendid Universal Electric Lighting System. If you did not want the system for any other purpose than to LIGHT YOUR BARN, it would be worth more than it cost. Write for catalog.

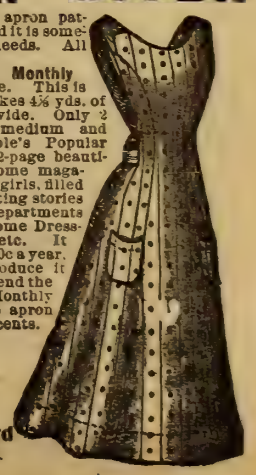
People's Popular Monthly is a fine, 32-page beautifully illustrated home magazine for women and girls, filled with bright, interesting stories and well edited departments on Fancy Work, Home Dressmaking, Cooking, etc. It would be cheap at 50c a year, but in order to introduce it to new readers we send the People's Popular Monthly a full year and the apron pattern for only 25 cents. Address,



PEOPLE'S POPULAR MONTHLY,
211 Grand & 3rd
Des Moines, Ia.

berg she happened to shake it and heard something lapping inside.

"What's that?" she asked.

"That's milk."

Rosie took another look at the nut and asked:

"Did the cow lay it?"

FOR THE COOK.

Beef Loaf.—This can be sliced and sold as it is sold at the delicatessen. This is excellent and economical, as this recipe makes a large loaf. One and one-half pounds of round steak (ground), one-half pound of pork steak (ground), one-half teaspoonful of salt, one-half teaspoonful of sage, one-half saltspoonful of pepper, one tablespoonful of onion juice. Beat one egg; add one-half cupful of sweet milk and one cupful of bread crumbs. To this add the meat and seasoning. Knead and make into one loaf. Butter the pan and pour one-half of a cupful of milk in the pan; press the loaf down firmly and bake one and one-quarter hours in a medium oven.

Parsnip Balls.—Boil in salted water till very tender; mash and season with butter, pepper and salt; add a little flour and two well-beaten eggs. Form into small balls and fry in hot lard.

Peppermints.—Put a pound of white sugar and one and one-half teaspoonfuls of cream of tartar in a teacupful of cold water. Stir until dissolved, then boil until a little of it, cooled in water, can be rolled into a ball with the fingers. Remove from the fire, allow it to cool a little, and beat with a spoon until it turns white. Add three drops of oil of peppermint, and mix well. If it hardens too quickly while beaten, set the bowl in a tin of boiling water. Make it into balls with the hands.

Corn with Poached Eggs.—Open a tin of corn and strain off the liquid, and then simmer the corn until tender in three tablespoonfuls of milk, one-half ounce of butter, pepper and salt. It will take about ten minutes. Then spread it on a hot fire-proof dish, arrange as many poached eggs as are required neatly on it, and serve very hot.

THE YOUNG FOLKS

Letters and Articles for this Department Should be Addressed to Aunt Mary, Hawley, Minnesota.

To do to others as I would
That they should do to me
Will make me honest, kind and good,
As children ought to be.
—Selected by Fairy Love.

TO LITTLE BOY BLUE.

Dear little Boy Blue,
I'm writing to you
From my home way out on the farm.
The school bells are ringing,
The peewees are singing,
And the sun's shining brightly and warm.

Have comfort, dear lad,
In your sorrow so sad.
Father has gone to his dear home above;
For his dear blessed life
Was finished on earth;
Now his memory will guide you with love.

Dear little Boy Blue,
Be brave and be true;
Father's precepts remember alway.
Then in that home there
He has gone to prepare,
You will surely go see him some day.
—R. S., Ill.

ROLL OF HONOR.

Adelheid, Betty Elizabeth, Blonde, Burdick, Carol, Chickapee, Columbine, Dagmar, Dalben, Elithe, Fairy Queen, Farmer's Son, Fink, Flora, Francesca, Franklin, Gabriella, Geda, Gem, Giggles, Golden Sunlight, Happy Farmer Girl, Hayseed, Honey Girl, Inacha, Indiana Lass, Iowa Beauty, Irish Vera, Jewel, Job Lot, Just Freddie, Katheryn, Lady Kate, Lazy Joe, Little Beauty, Little Missy, Lotus Blossom, Loza, Lucille, Moonflower, Mother's Helper, Nedevo, Queen Eleanor, Red, White and Blue, R. E. G., Retha, Rosetta, School Girl, Sharlot, Silvery Wings, Sissy, Sly Fox, Smiles, Spit Fire, Sunflower, Susan, Thalia, Verno, Watcher, Wee Lou, Wisconsin Girl.

Milkmaid, Rosy Plum and Ted get their pansy badges, and Wilna her silver badge this week. If Wilna will send her photo we will be glad to publish it, as she is the fourth "silver badger."

The following do not get on the Roll of Honor: Charmion, Mishy, Red Ruby, Tilda Engen, who sent recipes. Jessie, Junebug, Rosebud, who gave no address. (By the way, we get a letter from a new "Rosebud" every other day. Try to choose a name you haven't heard or seen in this department.) Ellenora Hoene, Henrietta, Old Owl, Trixie, riddles (not original). Badger Boy, Evangeline, Leona Evans, Wave, selections. Leona Evans also wrote on both sides of her paper. Now, young folks, try to avoid these errors if you wish to be put on the Roll of Honor.

To join us, simply write a good letter. Verses, original puzzles, stories or handiwork of any kind, if it is your own work, will be accepted. Everyone under twenty-one is welcome.

THE INTERESTING PUZZLES.

(Published January 30th.)

There were two answers so nearly alike, and both so good, that Aunt Mary has decided to give two prizes instead of one. These are the winners:

"Ayfa," Chatfield, Minn., and Ethel Heard, Melvin, Iowa.

There were in all 112 solvers. Quite a number fell down on Reykjavik, but very many sent perfect and excellent lists. The number of vegetables found, and the correct spelling of every word, counted in making the prize awards. Following are the names of the other solvers:

Agnes Koep, Alice Draye, Alice Kilmer, Alta Shetler, Amelia Jensen, Ann, Anna Metzger, Arthur, Attie Johnson, Bernice Brown, Bertha Schryver, Bessie Hartling, Bessie Snider, Betsey Bouncer, Blue-eyed Darling, Buckeye Girl, Catharine Fetler, Cecil Deutsch, Cecile, Charlotte Kennig, Clara Dawson, Clark Gossich, Cleda Rayburn, Daddy's Girl, Edna Cape, Edwin Drescher, Elithe, Eliza Reynolds, Elna Rosenken, Elsie Schauper, Emma Eilers, Ernest Sanders, Ethel Heacock, Fern Boettner, Ferne Matney, Fernwood, Florence Van Horn, Flotis, Frieda Lorfeld, Frizzle-top, George Montgomery, George Willey, Georgia Cox, Gertrude Driscoll, Gothenburg Neb, Grace Barber, Helen Finney, Henrika, Ida Birky, Ida Yoder, Irene Bekemeier, Irene Rehberg, James Searle, Jennie Buffenbarger, Joe Kreisel, John Pekarske, Josephine Omnink, Joseph McMahon, Lazy Joe, Leah Johnson, Lee L. Lenth, Lena Johnson, Leona Boeke, Leon Truxaw, Lily, Lizzie Schneider, Lola Kessler, Lola Pharaoh, Loza, Luella Morris, Lula, Mabel Thompson, Mabel Westbrook, Malta Ohio, Manasses Bontregor, Marie Eckerman, Maude, Maybell Groth, Meadow Lark, Mildred Coder, Myron Greene, Naomi Bradshaw, Napoleon, Nebraska Boy, Negah, Nellie Gray, Nina Kincheloe, Oscar Swanson, Otto Marek, Pauline Thomas, Pearl Chase, Phyllis Johnson, Prairie Gal, Queen Inez, Rebecca, Red Red Rose, Sadie Estes, Samuel Goodsell, Sea Foam, Signa, Mitts, Theodore Smeby, Tom Rosson, Vera Robinson, Verneal, Victoria Ill, Virginia Kirchner, Willamette, Winifred Hughes, Woodland Maidie, Zerlina.

ANSWERS TO THREE GOOD PUZZLES.

(Published February 20th.)

1. Nellie, Mary, Milicent, Dorothy, Rosalie, Evangeline, Ida, Marjorie; the letters taken out spell Nathalia.

2. St. Paul, Pierre, Jefferson City, Little Rock, Columbus, Jackson, Bismarck, Concord, Raleigh, Lincoln.

3. Genoa, Eliot, Orange, Reynard, Ganges, Egypt, Wales, Austin, Seward, Hale, Indiana, New Orleans, Ginger, Transvaal, Ottawa, Norway; initials spell George Washington; numbered letters spell surveyor, general, president, writer, hero.

CHILDREN IN THE FIELDS.

There were six children in the Brown family. The oldest of them was Margaret; then came Robert, Esther, Ruby, Charlie and Roslyn. It was early in the summer, the flowers were in bloom, and the trees in blossom, when one sunshiny morning the children went out in the fields to spend the day. They took their lunch with them and some baskets to gather flowers in. They went near a pond. They left their lunch by a tree until they should be ready to eat it. They went to the field barefooted. They went wading in the pond. After lunch they gathered some flowers. They got a great many spring beauties, violets and buttercups and other wild flowers. They found some wild moss and covered a stump with moss and wild ferns and flowers. Each one of the children had to get up on this stump and make a speech. They called themselves "The Stump Speakers' Association." Little Roslyn made the first speech:

Bid peepo, il peepo,
An peepo of all tide:
We dad a tee oo he' aday.
Weco ow eccatide.

This sounds like a foreign language to you, but Roslyn was only two and a half and this is what he meant:

Big people, little people,
And people of all sizes:
We're glad to see you here today.
Welcome to our exercises.

Charlie was five, and he felt ever so much older than baby Roslyn, so he stood up and spoke in a very manly voice:

Here I 'tand, all wagged and dirty;
If anyone kitheth me, I'll wun like a turkey.

Of course, after this challege, Margaret and Esther chased him and tried to "kith" him, and he did "wrun like a turkey." Next came Ruby, age 8. She had been going to school, and at school they learned to "speak pieces." This was hers:

By the shores of Gitche Gumee,
By the shining Big Sea Water,
Stood the wigwam of Nokomis—
I can't remember the rest.

They all clapped their hands, after each "speech," so that all felt satisfied they had done well. Esther tried next:

A friend in need
Is a friend indeed.

But the others told her that was too short, so she tried again:

True happiness, if understood,
Consists alone in doing good.

This was as bad as before, and as no applause was forthcoming she rattled off:

Jack and Jill
Went up the hill
To fetch a pail of water;
Jack fell down
And broke his crown,
And Jill came tumbling after.

To emphasize her remarks, Esther fell off the stump and they certainly clapped then. Now Master Robert, aged 13, took the stump: "Ladies and gentlemen, we are gathered here today for a day of pleasure and profit. When we look at the lovely flowers, and the—er—lovely trees, and—er—when we eat by the gurgling brook (only it's a pond, you see, but that doesn't sound so well)—when we eat—hm—(I said that before). Guess I'll quit." This was quite satisfactory, and the orator wiped the sweat from his brow proudly. "I can't make up a speech like Robert," said Margaret, as she scrambled to the post of honor, "but I will recite a little poem I made up the other day when I was churning:"

Splash! Splash! Splutter!
Hear me making butter!

How funny it would seem
If butter looked like cream!

Round and round I turn
The handle of this churn

Sputter! Splutter! Splash!
Don't I cut a dash?

Butter's good to eat,
So is bread and meat.

If we had no cow,
I'd not be churning now.

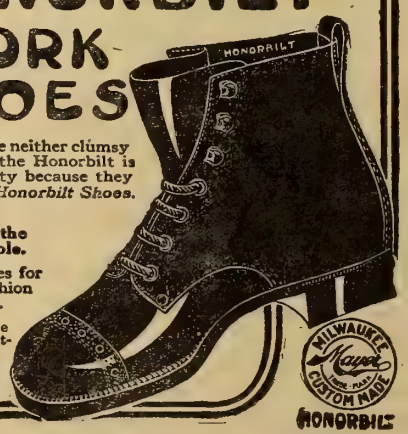
Splash! Splash! Splutter!
See me making butter!

This brought down the house, so to speak, and ended the program for the day. The sun was getting low, so they started home, having enjoyed every minute of this happy day in the fields.—By Ceda and Cara.

WORK SHOES THAT WEAR

Mayer Honorbilt Work Shoes are made for hard knocks and rough wear. The stock used is selected for its strength and durability. Seasoned upper leather, heavy oak tanned soles, solid counters, double leather toes and double rows of stitching make Honorbilt Work Shoes extra serviceable.

Mayer HONORBILT WORK SHOES



While they are built for hard service, they are neither clumsy nor ill-fitting. For comfort, looks and service the Honorbilt is first among work shoes. They have the quality because they are "built on honor." *Ask your dealer for Honorbilt Shoes. If not obtainable, write to us.*

WARNING—Be sure and look for the Mayer name and trade mark on the sole.

We make Mayer Honorbilt Shoes in all styles for men, women and children; Drysox, Yerma Cushion Shoes, and Martha Washington Comfort Shoes.

FREE—Send name of dealer who does not handle Mayer Honorbilt Shoes and we will send you free, postpaid, handsome 15x20 picture of George Washington.

The International Sunday School Lesson

FIRST QUARTER LESSON X GEN XVIV 12-17 23-29. March 9, 1913

THE DESTRUCTIION OF SODOM: TEMPERANCE LESSON—THE STORY.

While Abraham, with courtly hospitality and grace, was going a pace with his department guests, the Lord revealed the curse to him. Excess of joy over the blessing was tempered by grief over the impending curse, and vice versa. It was natural God should tell Abraham of what would befall Sodom. Proximity would suggest it. Then, too, the patriarch had fought for the Sodomites, and his nephew dwelt among them. But this vitally important information would never have been given to any human being of less exalted character than the patriarch possessed. This is the plain inference from the words with which the revelation is prefaced. The very fact that he was worthy to be chosen the progenitor of the favored race signified that he was worthy to be the Lord's confidant. The greater included the less. "Why, indeed, should the thing be hidden?" By this very act of confidence the Lord lifted Abraham, as he intended to, from the plane of servitude to that of friendship. The servant knoweth not what his lord doeth, but the friend does. As the Lord had assumed a human form, so he also accommodated himself to the fashion of human speech,

and described himself as on the way to make a personal investigation of the wickedness of Sodom—to see whether the reality of it was as great as the fame of it—and thus qualify himself to pass judicial sentence; all of which was of the nature of anthropomorphism. As the angel trio started on their dread mission, Abraham's generous, compassionate heart prompted him to throw himself between the Lord and the doomed cities. All unconsciously he makes himself a striking type of the great Intercessor of the race. He prays for sinners. Their awful fate touched his heart to pity. He had once gone to battle for them; now he goes to his knees in their behalf. He is a daysman, a mediator. With consummate skill he handles their desperate case. "Shall this be a wholesale slaughter? Will there not be a discrimination between the good and the bad? Might not the sparing of the bad on account of the presence of the good among them have a striking, exemplary influence? If so, what shall be the ratio between the good and the bad? Might it not be as fifty to the whole population? Or (with extreme deprecation of himself as an intercessor) forty-five, or forty, or thirty, or twenty, or ten?" Abraham displayed no bargaining temper, striving only to get the best possible terms, but was climbing the ladder of hope and faith, with each promise taking courage to ask for more. When he felt that he had reached the uttermost verge of Divine forbearance, then only he rested his case, and returned unto his place with mingled emotions—joy at the blessing that should soon be his; grief at the curse that should next day fall upon the cities of the Plain.

The Teacher's Lantern.

The value to the world of the good people who are in it here has a conspicuous illustration. They are the salt that saves it. There are things that God might do to the world which he does not do because of the presence of his saints. These are ever increasing in number, so the world grows proportionately safer. Never again will the poverty of the world in righteous men be so as in the case of Sodom. But Sodom and its awful doom will obtrude itself. The physical means of destruction were as natural as those of Pompeii. The traveler who has stuck his staff into a fissure of Vesuvius and taken it out aflame, has no trouble about that fiery eruption that destroyed the cities of the Plain. The region was volcanic, bituminous, saline. Even Lot's wife suddenly converted into a pillar of salt does not trouble one who has laid his hand on those human pillars—the petrified remains of the unfortunate victims of the Vesuvian eruption of A. D. 70. No connection can be traced, however, between the form of their wickedness and the form of their punishment. The cities were not depopulated by internecine strife, were not enervated by vice so as to become the easy prey to enemies; they were not consumed by the hideous diseases that would naturally follow their nameless sins. This may serve as a stand-off to the iterated affirmation of our day that the only punishment is the physical suffering naturally entailed. God burned the Sodomites with literal fire. Just and merciful was he, too, when he did it. "They were not unadmonished," Bishop Hall says. "If they had been warned by the sword, they had escaped the fire." Their cup was full. Their destruction was only an acceleration of the inevitable. While it shortened their own remediless misery, it was a startling object lesson to the race. Its exemplary power is incalculable. Millions may have been saved by the destruction of hundreds who had no further claim upon the Lord's forbearance. The modern fascination for city life in a city, even if it is only Zoar! That Banquo's ghost, the city problem, will "up" in this lesson. Within the lifetime of some readers the population of the cities of this country will equal its entire present population, and De Tocqueville affirmed that the cities are a real danger threatening the republic.

OUR FASHION DEPARTMENT.

ALL PATTERNS, 10 Cents Each.

THIS department is prepared especially for The Iowa Homestead. We can supply our readers with high-grade, perfect-fitting, seam-allowing patterns at 10 cents each, postage prepaid. Full directions for making, as well as the amount of material required, accompany each pattern. When ordering, all you have to do is to write your name and address plainly, tell us the correct number and size of each pattern you want and enclose 10 cents for each number. We agree to fill all orders promptly and guarantee safe delivery. Address all orders to The Iowa Homestead, Des Moines, Iowa.

5957 Lady's Waist.—For the woman who desires a plain, practical skirt model the one here given is especially appealing. The design is a two-piece one with the closing at the left side. It can be made with Empire or regulation waist line and has plaits at the bottom at each side which make for grace and convenience in walking.

The pattern, No. 5957, is cut in sizes 22 to 30 inches waist measure. Medium size will require 2⅝ yards of 4-inch material. Price of pattern, ten cents.

5997 Lady's Dress.—Here is a nice dress that is quite easy to make and is stylish and serviceable as well. The garment closes at the back and can be made with long or short sleeves. There is an applied yoke, which is the chief feature, and the skirt is a six-gored design. Serge or linen can be used to make the dress.

The pattern,, No. 5997, is cut in sizes 32 to 42 inches bust measure. Medium size will require 5¼ yards of 44-inch material. Price of pattern, ten cents.

6015 Lady's Skirt.—This skirt is made with three-piece upper part and is an excellent design for costume development. Any of the popular costume or suiting fabrics may be employed in following the design.

The pattern, No. 6015, is cut in sizes 22 to 30 inches waist measure. Medium size will require 3¼ yards of 36-inch material or 3 yards of goods 44 inches wide. Width of lower edge is 2⅜ yards. Price of pattern, ten cents.

6094 Boy's Russian Suit.—A clever little Russian suit for the small boy is offered in this design. The blouse has removable shield and a pretty sailor collar which extends well down at the front. This is fashioned of contrasting material. Linen, pique, madras or serge may be used to develop this design.

The pattern, No. C094, is cut in sizes 2, 4 and 6 years. Medium size will require 2⅜ yards of 36-inch material and ½ yard of 27-inch contrasting goods. Price of pattern, ten cents.

6029 Lady's Waist.—This waist has the fastening at the back and a feature of the garment is that the back peplum and collar are in one. The collar is in one. The collar is trimmed with contrasting material. The neck has a frill of edging and the bottom of the long sleeves is likewise finished with a trimming of edging. Linen, madras or silk can be used for this waist.

The pattern, No. 6029, is cut in sizes 34 to 42 inches bust measure. Medium size will require 2⅜ yards of 36-inch material and ½ yard of 27-inch contrasting goods. Price of pattern, ten cents.

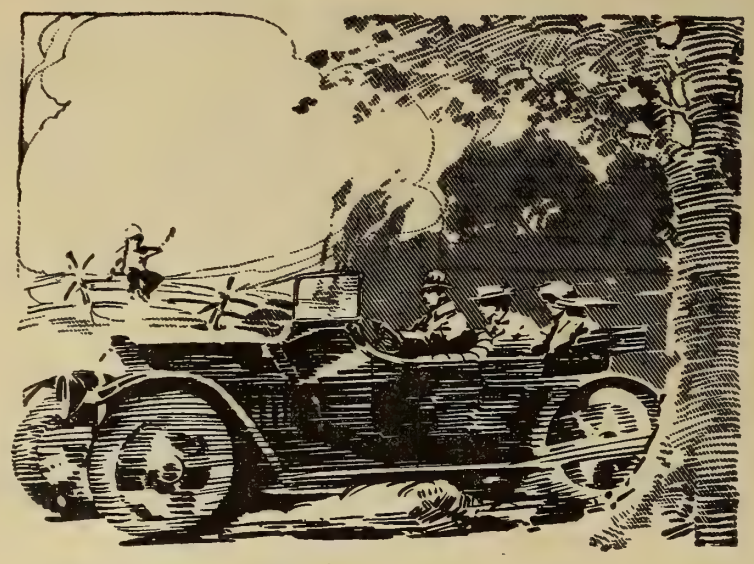
Mitchell



THE 1913 Mitchell makes three strong, favorable impressions on the man who wants to buy a car; the first by the way it looks; the second by the way it is made—the details of its construction and equipment; the third by the way it runs when he is taken out for a demonstration.

All exaggerations and sensational effects are eliminated in the design of the Mitchell; its lines are those of simple elegance and utility, developed by our engineers along the lines of the best foreign cars.

The man who examines the 1913 Mitchell carefully will soon satisfy himself that no other car at anywhere near the price offers so complete a combination of the newest improvements developed in the motor industry. All the essentials of the highest-priced automobile are in this car—the things that assure power, speed, comfort and convenience.

In the case of the Mitchell, moderate price does not mean "moderate" workmanship or materials; only the best available of both have been utilized—built according to the same standards that have made Mitchell vehicles famous for the past 78 years.

All 1913 Mitchell cars have left drive and center control; Bosch ignition; Rayfield carburetor; Firestone demountable rims; rain-vision windshield; Jones speedometer; silk mohair top with dust cover; Turkish upholstered cushions; Timken front axle bearings; gauges on the dash to show air pressure and oil pressure; gauge in gasoline tank showing amount of gasoline it contains; and a portable electric lamp which also illuminates the instruments on the dash.

All with T-head motor, electric self-starter, electric lighting system, and 36-inch wheels

An Advanced Registry for Swine.

By J. H. Murphy.

AS YET the various swine breed associations have made no attempt to establish an advanced registry system for their breed, but the time will doubtless come when these organizations will add to their herd book a special department for the recognition of meritorious animals. The success which the advanced registry has gained among the dairy breeds leads one to predict that its success would be assured among the swine breeds if carried on along the same lines.

What an advanced registry might be for any breed of live stock, can best be understood by a brief review of the essentials of the advanced registry system of the dairy breeds. This system is entirely an American idea and was first introduced by the Holstein-Friesian Association in 1885. Although established at this early date it did not progress, and become prominent for more than ten years because of the fact that no simple rules for admission to this department of the herd book could be made. However, after the Babcock test came into general use, butter fat production was made the basis for admission to advanced registry, and although the amounts of fat required, and the length of test varies among the different associations, yet in all breeds admission to advanced registry is on the basis of butter fat production. Before any animal can be tested for admission to advanced registry, however, it must be recorded in the herd book of that breed, that is, it must be a pure-bred, pedigreed animal. Admission to the advanced registry of the Holstein-Friesian Association is as follows: A cow two years old must make an official record of not less than 7.2 pounds of butter fat in seven consecutive days, one three years of age must make 8.8 pounds of butter fat, at four years of age 10.4 pounds of butter fat, and at five years or maturity twelve pounds of butter fat. Bulls are admitted as soon as four of their daughters have been admitted to advanced registry. The other dairy breeds require semi-official yearly records of from 250 to 360 pounds of butter fat. Based on these essentials the advanced registry department of the herd book of the various breeds has increased in prominence and importance until today it is the best advertising medium possible for the animals in it. By this method the meritorious animals are separated from the scrub pure bred and a purchaser knows immediately whether or not he is buying a producer, if he is aware of her ability to enter the advanced registry.

The scheme followed in connection with the advanced registry of dairy cattle offers many valuable suggestions for the application of a like plan in improving swine breeding. In the case of swine, however, instead of basing the requirements on performance entirely, which is more difficult to determine than in the case of dairy cattle, as much if not more importance should be placed on individuality. The breeds of lard hogs must fulfil the same market requirements, therefore, the standard of excellence for each breed should differ only in the minor points of breed detail, while the performance requirements for each might be the same. It would be necessary for each breed association to take up the matter at their annual meeting, and to formulate requirements which in their judgment will do the breed the greatest good. After the requirements of performance and individuality had been standardized it would certainly be necessary to have a competent and impartial man, who was a recognized judge of the breed to inspect and pass on all the candidates for advanced registry. Reproduction being an important factor in successful swine raising, prolificacy should be one of the prime requisites of performance. The requirements should also be such as to encourage to the greatest extent the production of strong, vigorous, disease-resisting animals.

Prof. J. G. Fuller, head of the swine department of the University of Wisconsin, was the first advocate of an Advanced Registry for hogs, and is responsible for the present agitation to standardize performance and individuality of the various breeds. Recently in discussing the matter Professor Fuller suggested the following requirements as a standard on which the various breed associations of lard hogs might establish an advanced registry for pure-bred animals.

1. Sows must be from a litter of six living pigs and have farrowed and raised to weaning a litter of eight.
2. Males must be from litters of six living pigs and have sired eight or more living pigs in 70 per cent of the litters in herds of ten or more farrowing sows.
3. All animals must fulfil the weight requirements of the score card, including breed characteristics, and score not less than 93 per cent.

First Among Comfortable Cars—And Why

You've made up your mind that you want comfort in your car this year.

And you know the Jackson has always been a comfortable car.

In view of this reputation, and the experience back of it, we believe we are justified in saying that this year—more than ever before—the Jackson stands first among easy riding cars.

This experience goes back eleven years in the automobile industry; and twenty years farther in the carriage building business.

There we learned the value of full elliptic springs; so we use four on every Jackson model.

There we learned that high seat backs and soft thick cushions are easiest riding; so we build Jackson seat backs to shoulder height, make the cushions 10 inches thick and tilt them a trifle toward the rear.

Long wheelbases and large wheels and tires help make the car ride easier. All Jacksons have long wheelbases and large wheels and tires.

Our engineers do their share toward comfort by determining the right weight and balancing it correctly; by providing enough power, and a reserve; by designing a mechanism that is silent, faithful and durable.

Comfort has been a hobby with us for years; and we give you the maximum result of our experience and study and experiments in these Jacksons.

Write today for his name and the handsome new catalog.

Have the Jackson dealer give you a ride over your own roads.

JACKSON AUTOMOBILE COMPANY, 1420 E. Main St., JACKSON, MICH.

Now is the time to paint your roofs—and the paint for the job is Sherwin-Williams Roof and Bridge Paint

All through the year in every kind of weather a roof needs the protection of a good, durable paint as much as in winter.

Sherwin-Williams' Roof and Bridge Paint is made for the painting of barns, metal and tin roofs, bridges, iron work and unplaned lumber. It covers well, works freely under the brush—and lasts. It is sold by dealers everywhere. Ask for color cards. This paint is but one of the many Sherwin-Williams Paints and Varnishes for protecting and beautifying your buildings and other property.

Write for our booklet,

"Paints and Varnishes for the Farm"

You will find it well worth your reading. It is free.

The establishment of an advanced registry based on conformation, prolificacy, health and vigor could best be carried out, and perfected by the breed registry associations of the breeds working in co-operation with the various agricultural colleges. Qualified representatives could be sent out by the colleges to inspect the candidates and report their findings to the breed association officers where they could be compiled for publication. This is the plan which has proven so successful for years with the dairy cattle association, and which has given entire satisfaction. It has been suggested that the advanced registry be published in connection with the annual herd book, and would be of great value both to the breed, and to the breeders. Illustrations and descriptions of the more noted animals could also be entered, and a part of the publication might profitably be devoted to records of state fair, and national show yard winners.

Many advantages would be derived from the operation of the system described. Our breeds of lard hogs have not yet attained their highest perfection, and there is still much more room for improvement on which our breeders might exert their ingenuity. There is still much opportunity for perfecting the type and raising the standards of excellence. At the present time the Poland China as a breed, it is thought, show too much refinement, and would be much benefited by more scale and strength of bone. The type of head needs to be perfected, for a well-shaped head on a pure-bred Poland China is seldom seen at the present time. The prolificacy of this breed also needs much improvement, and its popularity would be assured if breeders were certain of good-sized litters. The Duroc Jersey would be improved by greater uniformity of conformation and color.

The quality of this breed, which means clean, strong bones, mellow skin, and fine coat of hair could also be improved upon. The Chester White would be benefited if bred for better hams, a smoother finish, and elimination of the curly coat so often seen in this breed. Many of the Berkshires are high on the legs, narrow in body and light in the rear. Irregularity in color markings among Berkshires is also very common.

The advanced registry, however, should do more than perfect the type and fix the most desirable features in a breed. It should assure the permanency and transmission of the most important characteristics—prolificacy, type, disease resistance and vigor. Breeders who followed these ideals would be stimulated to make a more careful selection of breeding stock and thus eliminate the scrub pure bred from service. An animal to sell well as a breeder would have to be more than a pure bred, it would have to be a descendant of advanced registry stock and if not already in advanced registry, it would have to possess such other attributes as would enable the purchaser in time to enter it in advanced registry.

SOLUTION FOR TANNING.

To the Editor of The Homestead:

Dissolve together two pounds of chaponica, one-half pound of alum and one-half pound of salt using water enough to cover the hide. If hide has been folded to get it into the vat put sticks between so that it does not come together. It requires about six weeks to tan a cowhide and one week to ten days to tan a sheep or dog hide. When the color has penetrated the hide, which may be determined by cutting the edge, it is ready to dress. Rinse thoroughly in clear water, wringing as dry as possible after which it should be stretched well and given a thin coat of neat's-foot oil on the flesh side of the hide. After hanging in the shade until dry the hide is ready for use.

To make a good fleshing bench secure a log ten or twelve inches in diameter, split it and use one half. Bore two holes with one and one half or two inch auger almost through the log, about twelve inches from big end. Into these should be inserted the legs and the other end will rest on the ground. The round side should be up and the top end should come to the waist band. Cut the heads off of about six eightpenny nails and drive them into the log about one inch apart and one inch below the surface leaving the end exposed for about one-quarter of an inch. File these so that they will hold the hide, but not sharp enough to cut it. These nails will hold the hide while you are fleshing and taking the hair off. Use an apron and let a little of the hide hang over the end of bench, push your body against it and work your knife down.

To make a fleshing knife take an old spokeshave and straighten the handles out, or take a thick-back corn knife and make a handle on the other end. Use the back to take off hair and the sharp side to take off the flesh, but the knife should not be very sharp.

George I. Phillips.

Appanoose county, Iowa.

The Missouri house engrossed bills creating two new state departments. One bill establishes a state board of veterinarians of three members to examine all veterinarians in the state and issue licenses. The governor is given appointment of two members of the board and the state veterinarian is the third. The other bill creates the state reclamation department, in charge of a commission who is to receive a salary of $3,000 a year. He is to take charge of the flood protection, swamp land and reclamation work in the state.

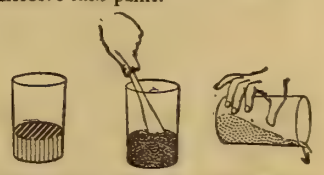
A Paint Lesson

TO a paste made of white lead and water, add linseed oil and stir.

Watch the oil drive out the water! Presto! an *oil* paste instead of water paste.

Dutch Boy White Lead and Dutch Boy Linseed Oil rush together and cling together just that way on the house *painted* with them.

What chance has rain or snow to dissolve *such* paint?



White lead and water, with layer of linseed oil. Mixture of white lead, linseed oil and water. Water poured off, leaving white lead and linseed oil.

Dutch Boy White Lead—white in the keg—any color you want to make it on the house.

Dutch Boy White Lead in steel kegs, 12½, 25, 50 and 100 lbs. Dutch Boy Linseed Oil, 1 and 5 gallon sealed cans. Ask your paint dealer.

Let us send you "Painting Packet 52" full of facts every house owner should know about painting. Also "Handy Book on Painting," full of information for the man on the farm. We will include our catalogue of 100 beautiful stencils for walls.

THE ACME OF SIMPLICITY
THE LAMBERT PATENTED FRICTION TRANSMISSION

$375,000 LOST DAILY

According to Motor Age Statistics
Will you help pay this loss or use a

LAMBERT

Patented Friction Drive Car and escape it?

More than half the troubles, accidents, break-downs and expensive delays and repair bills in the operation of motor cars result from the use of gear transmissions.

The Lambert Friction Drive frees you from this tremendous burden. It is of the simplest construction, employs but one-third as many parts as are used on gear drive cars and is practially fool-proof. No mechanical skill is required in its operation and it delivers 20 per cent more of the power generated by the motor directly to the rear wheels than is possible with bevel gears.

Climbs the steepest hills and travels through snow, mud and sand where no gear drive car can attempt to go.

Our "Automobile Catechism" and "Motor Car Anatomy" explains these facts in an interesting way and enables the intending buyer to select his car with intelligent care. Send for them right now.

NEWS OF THE SALE RING

McCray's Hereford Sale.

One of the most successful sales of cattle of any of the beef breeds that has ever been held in the United States was conducted at Kentland, Ind., February 28th, by Warren T. McCray, when seventy-six head of Herefords sold for $40,000, an average of $525, a record, numbers considered. It was a success in every way deserved by the gentleman making the sale. Buyers were on hand from every section of the country and from the Canadian Northwest, and they showed their appreciation of the high-class offering by prompt and liberal bidding. Mr. McCray has achieved an enviable reputation in the cattle industry. He has brought to bear upon that business the same high talents that have made him a success in the business world, and has built up at Orchard Lake Farm what is one of the best herds of Herefords in the country. The seventy-six head that he selected for the sale were an outstanding lot, bred along the most attractive lines, and Manager McHendry placed them in the ring fit to the minute. The result of the sale was a striking demonstration of the urgent demand for good cattle, and a remarkable exhibition of the value of a great sire. Perfection Fairfax, the bull at the head of Mr. McCray's herd, has not only won championship honors in all the big shows, but he has easily demonstrated himself to be the greatest present-day sire of the breed, his sons and daughters having been winners and champions all down the line for the past few years. The blood of this bull was in demand and the fact that it predominated in the majority of the offering was a great factor in the success of the sale. Ten of his cows sold for $10,105, an average of $1,010, and six of his daughters averaged $492, or an average of $817 on sixteen of his get, while the cows bred to him were in strong demand. The top of the sale was $2,500, which figure was reached twice. J. P. Cudahy, Kansas City, Mo., paid that price for the two-year-old son of Perfection Fairfax, Crusader Fairfax. This bull was not cataloged, but several of those present asked that he be offered, and he fell to the bid of Mr. Cudahy. Thompson Bros., West Point, Neb., paid $2,500 for the yearling bull, Duke Real by Beau Real, dam Lady Fairfax 9th by Perfection Fairfax. This youngster is little short of sensational. He was a winner all along the line last fall and both Mr. McCray and Manager McHendry consider him one of the greatest prospects ever bred at Orchard Lake Farm. Cyrus A. Tow, the progressive Hereford breeder at Norway, Iowa, secured one of the best bulls that ever went through a sale ring in Byron Fairfax, a three year old by Perfection Fairfax, and a show and breeding proposition of the highest class. Mr. Tow paid $2,450 and secured his bull at a conservative figure. The two year old, Russell Fairfax by Perfection Fairfax, went to Dr. J. E. Logan, Kansas City, Mo., at $1,650, and James J. Moffat, Carroll, Manitoba, paid $1,575, for the three year old, Perfect Fairfax by Perfection Fairfax, out of a dam by the champion, Dale, making him a double-bred Dale. The bull demand was the strongest seen at a sale in the middle West for years, twenty-seven head selling for the excellent average of $740, with the demand unsupplied. The top for females was $1,100, paid by J. A. Chapman, Brandon, Manitoba, for the four-year-old show and breeding cow, Gay Lass 5th by Prime Lad 16th, and at $1,025 Simon Downie & Son, Carstairs, Alberta, secured the two-year-old heifer, Sally, first at the 1912 International and bred to Perfection Fairfax. The result of this sale should be an inspiration not only to the Hereford breeders, but to all the beef cattle adherents, as it certainly shows that the demand is here, and is an acute one, and that the proper kind of cattle can safely be submitted to the appraisal of the public. Mr. McCray is to be congratulated upon the success of the sale, but it was a success to which he is justly entitled. The Hereford has had no more loyal adherent than Mr. McCray and none that has shown his faith by his works any more than he has. Much credit for the success of the sale is due to Manager James McHendry. The cattle were in prime condition and showed evidence of the work of Mr. McHendry's master hand. Every detail was carefully looked after and there was no hitch from start to finish. Col. Fred Reppert sold the cattle and did a most excellent day's work, the entire offering being disposed of in about three hours. He was assisted in the ring by Colonels Huxley and Igleheart. The following is a list of the sales in detail:

FEMALES.

Gay Lass 5th, calved 1909; J. A. Chapman, Brandon, Manitoba	$1,100

White's Holstein Sale.

Frank White, Hampton, Iowa, held his sale of Holstein cattle as previously announced. Cattle were contributed

from other herds and altogether over 100 head were sold at a very handsome average, as the following list would indicate. The demand for Holsteins, especially good ones, is very strong and the buyers undoubtedly will make plenty of money on their purchases. Those selling at $100 and above are listed:

FEMALES.

Lauretta Burke, calved April, 1917; A. J. Podendorf, Logan, Iowa.....$155
Eva Rubina 3d, calved September, 1910; J. F. Sagehorn, Kensett, Ia. 300
Meadow Brook Marble Princess, calved January, 1912; Carl O. Wamstad, Tracy, Minn..... 170
Affra Ottey De Kol, calved June, 1911; W. B. Loveland, Janesville, Iowa 245
Paxton Affra Emma 3d, calved April, 1911; J. V. Blackford, Hampton, Iowa 295
Anchoria, calved March, 1911; Carl O. Wamstad 230
Flush's Emma De Kol 2d's De Kol, calved May, 1903; Frank Dockery, Hampton, Iowa 230

Storm's Successful Sale.

On Thursday, February 20, 1913, J. W. Storm held a most successful sale at his farm near Seville, Ohio. It was a good offering and some twenty sows were bred to Volunteer and averaged $110 per head. The top of the sale was a Defender sow bred to Volunteer, she selling at $500. Below is a list of buyers and prices:

1. F. A. Ott.....$ 97
2. H. E. Browning, Hersman, Ill... 500
3. L. H. Scott, Alexandria, Ohio... 105
4. Jno. Truax & Son, Sycamore, O. 130
5. Mahan Bros., Osborn, Ohio..... 80
6. Smith & Rodgers, Springfield, O. 105
7. C. G. Ballou, Toledo, Ohio..... 95
8. C. B. Ream, Lima, Ohio..... 72
9. H. J. Long & Son, Ashland, O... 59
10. F. A. Moore, Van Wert, Ohio... 53
11. F. A. Moore..... 52
12. Chas. Settles, Fulton, Mo..... 55
13. Chas. Settles 54
14. C. J. Rice, Seville, Ohio..... 56
15. Bert Bilheimer, Sterling, Ohio... 55
16. Everett Stone, Creston, Ohio... 50
17. W. P. Penry, Radnor, Ohio..... 98
18. E. S. Mayes, Jr., Springfield, Ky. 55
19. E. S. Barker, Canton, Ohio..... 53
20. J. F. Myers, Marion, Ohio..... 72
21. J. R. Graham, Jeromeville, Ohio 65
22. J. R. Graham..... 45
23. J. D. Brown, Massillon, Ohio... 49
24. F. A. Ott..... 39
25. N. M. Cutting, Medina, Ohio..... 42
26. E. W. Beamer, Ashland, Ohio... 54
27. H. K. Ray, Kewanee, Ill..... 58
29. N. A. Linn, Creston, Ohio..... 40
30. A. Workman, Orville, Ohio..... 140
31. F. J. Rupert, Spencerville, Ohio 75
32. John Keefe, Piper City, Ill.... 67
33. J. W. Chapman, Woodburn, Ind.. 100
34. Smith & Rodgers 157
35. Jno. Truax & Son 220
36. Jno. Obrecht, Loudenville, Ohio 58
37. H. J. Long & Son, Ashland, O... 48
38. Byron King, Perrysville, Ohio... 59
39. Byron King 47
40. E. C. Fomer, Jeromesville, Ohio 44
41. Walter Geltgey 47
42. Smith & Rodgers..... 45
43. I. D. Brown, Creston, Ohio..... 49
44. E. Stout, Creston, Ohio..... 55
45. H. Myers, Wooster, Ohio..... 45
46. W. A. Little, Kenton, Ohio..... 44
47. H. G. Bernard, Creston, Ohio... 45
48. Guy Stafford, Loudenville, Ohio 47
49. H. J. Long & Son..... 57

Three unborn pigs out of Browning's Duchess, sired by Volunteer, were sold. They brought $100, $100 and $95, respectively. The average on the entire sale was $73.82 on fifty-two head.

Stemen & Sons' Duroc Sale.

Stemen & Sons had a good sale, as is their custom, although the prices did not range quite so high as usual, but this was owing to the lateness the sows were bred. Below is a list of buyers and prices:

1. Samuel Harrod, Wapakoneta, O...$47
2. Arthur Hyser, Sheldon, Ind..... 45
3. John Keefe, Piper City, Ill..... 80
4. C. F. Perry, Spalding, Ohio..... 46
5. J. W. Chapman, Woodburn, Ind... 93
6. Pttsburgh-Buffalo Co., Johnetta, Pa. 49
7. L. E. Huffine, Van Wert, Ohio... 43

ANNIVERSARY

Don't Buy a Car On Appearance Only

"Handsome is as handsome does."

Many automobile buyers overlook power, endurance and economy and choose a car mostly on appearance. Of course you want an attractive car. But even more important is the question "How long will it stay attractive?" A more beautiful car than the

Apperson "Jack Rabbit"

The Car With the Powerful Engine

—no man can ask. In design, in finish, in comfort, in equipment, it leaves nothing to be desired. Apperson cars are especially clean.

Back of its beauty is the strongest frame and longest record of satisfaction.

The "Jack Rabbit" is the direct descendant of the first American Automobile—built by the Apperson Brothers in 1893.

It is proved by 20 years of service. It is the refined successor of cars 17, 18 and 19 years old that are still doing duty

Of the 17,000 Appersons now in use, the average age is 8 years.

Take no chances with unproven cars. The "Jack Rabbit" will last you a lifetime—it is most economical in upkeep. It has dozens of exclusive points of advantage over all other cars.

Write for booklet today and get posted on all these points.

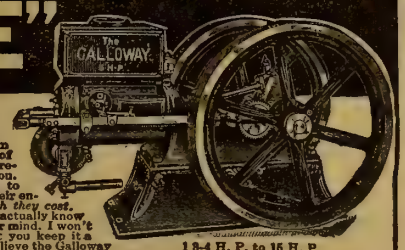
Bill Galloway Says: "I'll Give You 3 Months Power FREE"



I'll let you take any engine I've got and use it on your own farm for thirty, sixty or even ninety days *absolutely free.* How's *that* for an offer? I'm going to give every man in the country who has been thinking of getting an engine a chance to try the Galloway absolutely, entirely at my risk. I want you to take a Galloway and let it work for you. Put it up against the *hardest tests you can think of.* Go around to your neighbors; ask them about *their* engines. Find out what their engines are doing, how much trouble they are giving *and how much they cost.* Then go home and compare what they've told you with what you actually know about your Galloway. Take all the time you want to make up your mind. I won't hurry you. If a month isn't enough, let me know and I'll let you keep it a month or two longer. Then if you can't honestly say that you believe the Galloway is the best engine in the world at any price just send it right back to me, *I'll pay the freight both ways.* You won't be out a cent.

1 3-4 H. P. to 15 H. P.

Keep the $50 to $300 You Save If you want to keep the Galloway I'll make you a price that not one manufacturer or dealer in America would even think of meeting. You keep the $50 to $300 that I save you right in your own pocket. I'll sell you a Galloway *for just what it costs to make* with only one small factory profit added. No wholesaler's, jobber's, dealer's, salesman's or any middleman's profit of any kind.

Free Service Bureau! The services of my staff of engine experts are always at your command *free.* They will tell you how to judge an engine, how to select the one best type for your purposes, how to handle and use it to your best advantage—in fact, they'll help you solve *all* your engine troubles without any cost or obligation whatever.

Get My 1913 Proposition The very best offer I have ever made is waiting for you. I want to tell you how you may get a genuine Galloway engine *partly or entirely without cost.* No canvassing—no soliciting—just the fairest and most liberal co-operative offer anybody ever made.

FREE Engine Book Now don't wait—just send me a postal or letter now. I'll mail you my big Engine Book and full particulars of my wonderful 1913 Special Proposition FREE. Write me RIGHT NOW.

Wm. Galloway, President WM. GALLOWAY COMPANY, 105 **Galloway Station, Waterloo, Iowa**

We carry Engines in stock at Chicago, Kansas City, Council Bluffs, Minneapolis and Winnipeg. (185)

A Wonderful Plow

A really UNIVERSAL Plow at last! It "walks" right through *tame sod, old cornfields, stubble, meadow, sandy loam, mixed soil, heavy clay, gumbo,* etc. Turns the slice clear over, *flat* and *smooth.* All trash buried. Dirt thoroughly pulverized. Leaves top flat against *subsoil.* No air spaces to cut off moisture from below. In dry weather, moisture comes up to the plant roots—just like kerosene comes up your lamp wick. *No other plow gives you this drought protection.* No other plow ever produced such perfect plowing.

Its perfect work and absolute satisfaction has made the "C.T.X." the greatest selling and most popular plow ever produced.

You can't afford to buy or use just "any old" plow. Investigate this sensational plow first. Look into this proposition. Send a postal now and get the Rock Island Plow story in *complete form.* And we will tell you nearest place you can see this plow and price it. Then you can judge for yourself. You will like it. Don't wait till you need a plow. Investigate *now.* Address

Lost $100.00 by Not Buying Champion Silos

That's what Wisdom and Taylor of Bowling Green, Mo., write. They bought two wooden door frame silos several years ago. Since then they bought two Champion steel door frame silos and consider them worth $100 more than any others. That's more proof of our claims that the Champion is the best.

Don't Make the Same Mistake—Investigate

Don't be satisfied with any kind of silo. Get the best. That means the Champion, the kind that's on thousands of farms, the silo with interlocking steel door frame, malleable lugs, combination latch and ladder, steel anchors and inside hoops.

Write for Full Particulars

Find out all about the Champion. One proof will convince you that the Champion is the best, also biggest profit maker.

Don't Have a Blind One

"VISIO"

An Absolute Cure for Moon Blindness

(Opthalmia), Cataract and Conjunctivitis

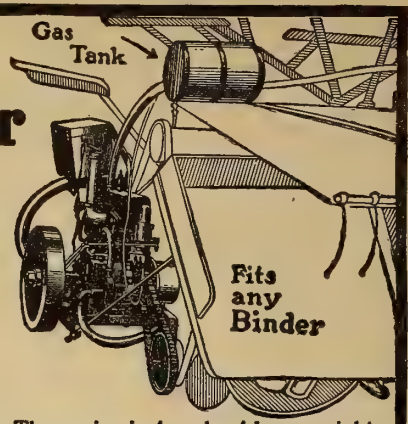
Shying horses all suffer from diseased eyes.

"Visio" will convince any horse owner that it will absolutely cure defects of the eye, irrespective of the length of time the animal has been afflicted. No matter how many doctors have tried and failed, use "VISIO" under our GUARANTEE to refund money if it does not cure.

$2.00 per bottle, postpaid on receipt of price.

VISIO Remedy Ass'n, 2459 Calumet Ave., Chicago, Ill.

Operate Your Binder with a Cushman Engine



THE Farm Cushman Engine saves a team and makes grain cutting easy. All the horses do is draw the machine. The engine does all the work of operating.

Steady power is supplied. The sickle never stops when the bull wheel skids.

It is a great advantage in low, wet ground. More work and more satisfactory work can be done in all conditions of weather and grain.

Hundreds of these engines are now in use—on grain binders everywhere—on rice binders in the South and on corn binders.

Operating cost is low—30c to 50c a day. That's actual experience of users.

The Farm Cushman is the original binder engine. It is the first engine ever adapted to binders and the only one in successful use.

The engine is 4 cycle, 4 h.p., weight under 200 lbs. It speeds to 5 h.p. easily. Built on the automobile engine plan—high efficiency and great power in light weight.

It is fitted with high grade Schebler carburetor. Its automatic throttle governor measures out just enough fuel to do its work at any required speed and no more.

The Farm Cushman fits any binder. It can be detached and used separately to run any other farm machine.

We build 6-8 h. p. and 20 h. p. specialty engines for heavier farm duties. Power for all purposes. Tell us your needs.

You should know this binder engine. Read the story of advantages told by its users. Send for free book.

CUSHMAN MOTOR WORKS, 2029 N St., Lincoln, Neb.

Costs Less Per Year

That's the Record of Great Western Spreaders for the Past 12 Years

Less Expense—Less Labor—Less Repairs—Longer Service

The cost of a manure spreader must be figured by the *years* of service it gives you and the *kind* of service you get out of it. The first cost of a **Great Western** may be a little more than the price of some shoddy, poorly-made, heavy-draft spreader, but it costs more to make a **Great Western**, and that extra cost is made up to you many times in the kind and length of service it gives. Based on the *cost per year*, the **Great Western** is the cheapest spreader you can buy. The extra dollars you pay at the start are paid for *quality*, and you'll get them all back, with many more.

Great Western—Low Down

embraces all the great features that have kept it ahead of all others for over twelve years. More than 100,000 farmers testify to the superiority of this machine. There's but one opinion regarding this spreader, and that is that it is the *one perfect* spreader.

Features that Count

Wheels under the load—roller bearings—rear wheels track with the front—lightest draft — no neckweight — simplest direct drive—no hidden parts, no enclosed gears—individual rollers—strong, rigid oak beater rails — these are some of the points that put the **Great Western** in first place years ago, and have *held* it there ever since.

Trussed Steel Frame

The Great Western frame is built for great strength—of best trussed steel, firmly braced. All weight of load and beater, and force of operation, rests on 4-inch steel sills.

Simplest Drive Possible

Nothing to get out of order. No enclosed gears. Simple shifting device—no parts in motion when driving to or from field.

Fewest parts on any spreader. Simplicity, strength, service and durability are its crowning features. *Write today* for Free Spreader Book.

The average was about $40 on the entire lot sold.

The Arney Angus Sale.

The J. V. Arney Aberdeen Angus sale at Leon, Iowa, on February 27th, encountered the severest storm of the year, but he came out all right and made an average of $105.30 on everything, including a lot of young calves. The top of the sale was Queen of Leon 2d, a three-year-old cow, that went to Bert Woodard, Leon, Iowa, at $202.50. Col. Silas Igo cried the sale. Below we list those selling for $100 and above:

COWS.

Blackbird Missie 2d, calved December, 1907; W. H. Colter, Decatur City, Iowa----------$137.50
Arndale Black Princess 4th, calved May, 1910; Art Scott, Decatur City, Iowa---------- 160.00
Arndale Black Princess 2d, calved May, 1909; Art Scott---------- 175.00
Arndale Prunella, calved September, 1904; Art Scott---------- 125.00
Poetess of Arndale, calved March, 1908; Brann & Moore, Memphis, Mo. ---------- 117.50
Poetess of Arndale 2d, calved April, 1910; T. R. Sanders, Memphis, Mo. ---------- 137.50
Elluna 2d, calved July, 1909; Brown & Walker, Clarinda, Ia.- 130.00
Erica of Paramount, calved May, 1909; E. O. Lovett, Garden Grove, Iowa ---------- 130.00
Katrine of A., calved September, 1910; Brown & Moore---------- 162.50
Queen of Leon 3d, calved April, 1910; Euritt Bros., Decatur City, Iowa ---------- 105.00
Queen of Leon 2d, three years; Bert Woodard, Leon, Iowa---- 202.50

McCarty's Hereford Sale.

T. E. McCarty, Princeville, Ill., dispersed his herd of Hereford cattle at public sale at Peoria, Ill., on February 27th. The attendance was large, many breeders who had attended the McCray sale at Kentland, Ind., the day previous being on hand, while there was a liberal attendance of local buyers, so that the entire offering was quickly absorbed. Mr. McCarty has been breeding Herefords for some twenty years and has always found them one of the most profitable things on his farm, but desiring to make a change in his farming operations he was compelled to sell his cattle. The top of the sale was $355, paid by J. C. Robinson & Son, Evansville, Wis., for the six-year-old cow, Lady Belle, sired by Disturber. J. L. Priddy & Son, Warren, Ind., paid $250 for the cow, Galatea, calved in 1909, sired by Beau Donald 68th and out of a March On dam. Priddy & Son were liberal bidders and buyers all through the sale, as were also Michael Jacobs, Sparland, Ill.; R. B. Ross, of Virginia, and J. H. & J. W. Van Natta, La Fayette, Ind. Mr. McCarty conducted the sale in a highly satisfactory manner and the selling was done by Col. Fred Reppert. The following is a list of all sales amounting to $100 or over:

COWS AND HEIFERS.

Acasia, calved 1911; R. B. Ross, Virginia ----------$100
Florence Perfection, calved 1910; L. Ba, LeRoy, Ill---------- 135
Miss Donald, calved 1907; J. L. Priddy & Son, Warren, Ind------- 200
Hazel Perfection, calved 1911; R. B. Ross ---------- 100
Belle Donald 2d, calved 1908; J. H. & J. W. Van Natta, La Fayette, Ind. ---------- 200
Perfection Belle, calved 1910; J. Hildebrand, Glasford, Ill------- 135
Jessaline Donald, calved 1909; F. W. Sheehy, Durant, Iowa---------- 125
Linda Donald, calved 1906; Michael Jacobs, Sparland, Ill---------- 110
Linda Perfection, calved 1909; Michael Jacobs ---------- 125
Belle Disturber, calved 1911; Michael Jacobs ---------- 160
Sophia, calved 1911; J. C. McKown, Glasford, Ill. ---------- 105

Power Saves Feed Bills

Don't waste the feed. Get the full value from the grain you feed your stock—grind it—get all the beef and pork out of every bushel. Get a feed mill outfit. Here's a good one—

A 4½ Rumely-Olds Engine and a Rumely Feed Mill

We don't have to tell you about this engine. It's proved its worth. Thirty-five years of experience goes into every engine. It's built right—every part of the best material. You'll find a hundred uses for this engine. It will make money for you every day. Inquire about this engine—you can't go wrong on it. It's built for service and will save money for you every day that you own one.

The Rumely Feed Mill is the right mill to grind feed—made of the best materials—least number of parts—easily adjusted.

Send for Data-Book No. 344, on the Rumely-Olds Engine and information about this feed mill. Ask the name of our nearest dealer.

When writing to advertisers please mention The Homestead.

There's a long string of middlemen between you and the mill and every one adds **his** *profits to the price of* **your** *lumber.* The retail dealer in your town is only *one* of them. You can't see the others but they're all there, adding to the *cost* of your lumber without adding to its *quality* or quantity—making you pay *more for low grade stock.*

STOP this loss. **Go over the middlemen's heads**—buy direct from our mills and **get all that you pay for.**

And remember—Quality is as important to you as price. A house built with poor stock is labor and money wasted. Every piece of lumber you buy from us is clean, new, high-grade stock. *Guaranteed* to be up to standard of specifications or better. It is not picked-over lumber. No local Line Yard can give you our quality of lumber at our price, because their stock is limited and they do not get it at first hands.

Our enormous supply—the biggest in the middle west—enables us to give you exactly what you want, in size and quality. **No substitutions** which make your lumber **cost you more in cash and labor.**

THESE ARE POINTS TO REMEMBER

You'll be surprised how much money we save you even on the smallest orders. **YOU TAKE NO RISK.** We guarantee every item of every shipment to be satisfactory, or it may be returned at our expense and your money refunded.

If you buy as much as a car load **WE'LL REFUND YOUR RAILROAD FARE BOTH WAYS.** Come and pick out what you want in our big yards.

Lumber is advancing. Buy now before the advance, for all your spring, summer and fall building. Send us list of what you need and let us quote you.

DUX-BAK ROOFING *A ready roofing of the highest grade, at an underselling price. Note these prices and long guarantee periods:*

1 ply, 35 lbs. to sq. only $1.15 a sq. *Guaranteed 5 Years.*
2 ply, 45 lbs. to sq. only $1 40 a sq. *Guaranteed 10 Years.*
3 ply, 55 lbs. to square only $1.70 a square. *Guaranteed 15 Years.*

"Farmers' Pride"

A General Purpose Saddle That Fills Every Need. **Special Price for March and April** **$9.67**

Seldom is an opportunity offered to buy a good saddle at a low price, and never has so fine a saddle as our "Farmers' Pride" been offered at anywhere near the price we are quoting. Just another example of Sears, Roebuck and Co.'s policy of distributing dependable merchandise at prices based on production cost plus **one** profit.

This is the way we make it:

TREE—13½-inch, Morgan style, steel fork and horn; sheepskin covered bars, making the saddle easy on the horse's back.
SKIRTS—21 inches long.
RIGGING—Double cinch rigged, with 1-inch tie straps to tie; 4-inch soft hair cinches.
SEAT—Half leather covered, roll cantle.
STIRRUP STRAPS—1½ inches wide, full length, to buckle; fenders, 6½ inches wide, 13½ inches long, attached; 3-inch Texas bolt stirrups.
Weight of saddle, about 13 pounds; packed for shipment, about 20 pounds.

No. 10W3513021/4 Price.....$9.67

Send us an order for either or both of these items and we will ship promptly. Your money back if you are not pleased. Take advantage of these low prices now, as hides are scarce and leather is steadily advancing in price. This is an opportunity that will not be presented again. Our complete line of exceptional values in harness, saddlery and accessories is shown in our beautifully illustrated 80-page Special Harness Catalog. Write "Harness" on a postal card, sign your name and address and we will mail you this catalog postpaid. Act now and send us an order and save money.

Our "Mansfield" Farm Harness

is still another money-saving bargain in a strong, serviceable double farm harness worth almost twice the price we ask for it. Following are the specifications:

BRIDLES—⅞-inch short cheeks, round side reins, sensible blinds, nickel spots.
LINES—1⅛ inches wide, 18 feet long.
HAMES—Wood, iron bound, square staple; Moeller hame tugs, jointed Concord clip attachments; 1½-inch breast straps and martingales, with collar straps.
TRACES—1¾ inches wide, Moeller clip cockeyes.
TRIMMINGS—XC buckles.
Weight, packed for shipment, about 80 pounds.
No. 10W35567¼ Price, without collars..... **$32.79**

PADS—Flat harness leather, felt lined; drop hooks and terrets; nickel spots; folded bellybands; 1⅛-inch hip and back straps; scalloped safes, cruppers buckled on; Cooper's trace carriers, nickel spotted on outside.

A BARGAIN ONLY **$32.79**

We guarantee this saddle or harness to give you satisfactory service.

The Pfander & Sons Poland China Sale.

Another great sale is to be recorded for J. W. Pfander & Sons, Clarinda, Ia. On February 26th they sold forty-one head of their big-type Poland China sows at an average of $110.69, making it one of the best sales of the season. They put up a most excellent offering and those who attended the sale were well pleased and went after them as though they wanted them. The top of the sale was Pawnee Belle, No. 2 of the catalog, and she was bought by U. S. Burn, Saxon, Mo., at $330. She was certainly one of the greatest sows that has gone through any sale ring this winter. She was in pig to old A Wonder. Col. H. S. Duncan cried the sale. We list herewith the entire offering:

1.	Archie Davis, Tremont, Ill	$120.00
2.	U. S. Burn, Saxon, Mo	330.00
3.	H. C. Sprague, Sabina, Ohio	150.00
4.	John Kiely, Toledo, Iowa	112.50
5.	Perry Pollard, Humboldt, Neb.	80.00
6.	J. F. Foley, Oronoque, Kan.	102.50
7.	G. A. Kissinger, Milford, Neb.	195.00
8.	Henry Fesenmeyer, Clarinda, Iowa	150.00
9.	Will Forbes, Clarinda, Iowa	100.00
11.	Perry Pollard	150.00
12.	Harry Nelson, Miami, Texas	157.50
13.	Geo. Griffith, Pleasanton, Ia.	128.50
14.	C. E. Sapp, Sharpsburg, Iowa	75.00
16.	John Kiely	115.00
18.	T. E. Miller, Clarinda, Iowa	70.00
20.	Ernest Beery, Shambaugh, Ia.	107.50
21.	W. D. Carwin, Essex, Iowa	120.00
22.	W. D. Carwin	77.50
24.	Clyde Pfander, Clarinda, Ia.	59.00
25.	Everett Johnson, Clarinda, Iowa	200.00
26.	H. F. Adams, Castleton, Ill.	155.00
27.	Thos. O'Hara, Ohio, Ill	117.50
30.	Miller Parrish, Eureka, Kan.	120.00
31.	Everett Johnson	79.00
32.	A. L. Bedell, Diagonal, Iowa	102.50
37.	Ralph McCoy, Hepburn, Iowa	102.50
38.	H. C. Sprague	97.50
40.	H. P. Mayne, Sharpsburg, Pa.	67.50
42.	W. D. Carwin	65.00
43.	George Griffin, Pleasanton, Ia.	71.00
44.	W. C. Galloway, King Hill, Idaho	60.00
45.	John Doyle, Bloomingsburg, Ohio	80.00
46.	Howard Phelps, Carthage, Mo.	87.50

55.	A. L. Bedell	68.00

Evans' Chester White Sale.

On February 28th, C. C. Evans, North English, Iowa, closed out his herd of Chester Whites, which was necessitated by the sale of his farm, upon short notice. Mr. Evans expects to buy another farm and engage in the business again. This sale made the highest average ever made on Chester Whites. The high standing of th herd made this possible. R. E. Brown topped the sale on No. 1 at $276. J. L. Barber secured a great sow in No. 14 at $165. J. B. Tracy, Alden Anderson, J. H. Mahannah and G. H. Hess all secured good sows at right prices. H. N. Donhowe, Story City, Ia., sold the offering and has to his credit the best sale in Chester White history. Those selling at $50 and above are listed below:

Chief Keokuk; Frank Sherer, Joy, Ill.		$130
1.	R. E. Brown, Dunlap, Iowa	276
2.	G. H. Hess, Leaf River, Ill	154
3.	A. M. Gustafson, Trade Lake, Wis.	100
4.	W. H. Hall, Harper, Iowa	93
5.	Wm. Meyer, Hedrick, Iowa	62
6.	J. B. Tracy, Greene, Iowa	105
7.	Otis Coffman, South English, Iowa	85
9.	J. H. Mahannah, North English, Iowa	125
10.	C. Zimmerman, North English, Iowa	70
12.	A. J. Campbell, North English, Iowa	60

The average on the entire offering of sixty head was $59.90. The average on the bred sows was $64.

The Shrader Poland China Sale.

Quite a good crowd of breeders and a good local attendance were present at the W. M. Shrader & Co. dissolution sale at Greenfield, Iowa, on February 25th, and they made an average of $61 on everything. The top of the sale was that splendid boar, Choice Look, and he went to J. A. Countryman & Son, Rochelle, Ill., at $215. This is one of the best Poland China boars sold in the West in recent years and he is one of the very best breeding hogs that we know of. His get have always been sale toppers and they have had both size and quality. He should make a great boar in the Countryman herd. Below we list those selling for $40 and above:

	Choice Look; J. A. Countryman & Sons, Rochelle, Ill.	$215.00
Big	Improver; E. S. Bosold, Stuart, Iowa	100.00
1.	Ed Hickey, Gretna, Neb.	100.00

THE MARKETS.

Union Stock Yards, Chicago, Ill., February 28th.—Steer trade has been gradually working on a stable basis. February has witnessed advances of 25 to 75 cents per hundredweight. Medium and cheep steers showed most of it. Killers are now getting only crooked rough and thinly covered steers below $8 and much of their buying is at $8.25 to $8.60. Finish is the factor and weight is not enjoying a premium, nor is it likely to do so. The spread is narrow and 80 per cent of the crop is selling at a range of $7.80 to $8.60. Prices are high, especially when the product reaches the consumer, and killers are determined on a hand-to-mouth policy which renders the market supersensitive to many influences, especially the weather. Every short supply reveals killers' needs and frequently they have not been able to get enough beef to satisfy urgent trade needs. Considerable light quarantine stuff is reaching Kansas City and St. Louis, and as conditions have been right for making beef in Texas an expanding movement from that quarter may be expected. The visible supply appears to be in strong hands and market sentiment is conservatively bullish.

Prime steers, 1,350-1,700 lbs.	$8.85@9.00

Medium to good yearlings	7.75@8.20
Common to fair yearlings	7.00@7.60
Good steers, 1,100-1,400 lbs.	7.75@8.40
Good steers, 900-1,200 lbs.	7.75@8.00
Fair steers, 900-1,200 lbs.	7.50@7.75
Medium steers, 850-950 lbs.	7.25@7.50
Inferior steers, 850-950 lbs.	6.85@7.25
Common steers, 800-850 lbs.	6.50@6.75

STOCKERS AND FEEDERS.

Declines ranging from 10 to 35 cents are shown by stock and feeding cattle from the phenomenally high rates current a week ago, but the reaction is likely to prove a temporary one only in the opinion of many traders, for high as prices have been and still are, it would neither take much of curtailment of supply or long continuance of a healthy and strengthening fat cattle trade to arouse prospective stock and feeding cattle buyers' anxiety for supplies again to feverish heat. Killers and feeders are competing for nice qualitied, fleshy feeder steers costing around $7.75 to $8. The only drawback to investment in stockers and feeders is the high cost of cattle, as corn is both plentiful and reasonably cheap and there is a great abundance of other feed in most all sections, while an infallible sign of scarcity of thin young cattle has been furnished by the demand for them that comes from all sections of the West. Whatever else happens, stocker and feeder cattle are not going to be cheap in any sense of the word. Few stock steers of decent killing quality are available at $6.75 to $7, most of the fair to good 600 to 700-pound stockers selling at $7.10 to $7.50, choice of like weights up to $7.65 and good to best 800 to 1,050-pound feeders making $7.60 to $8. Good light stock heifers sell around $5.25, desirable heavier feeding grades up to $6.25 and decently bred thin young cows $5.25 to $5.75.

FEEDERS.

Selected, 900-1,150 lbs.	$7.65@8.10
Fair to good, 700-900 lbs.	7.10@7.60

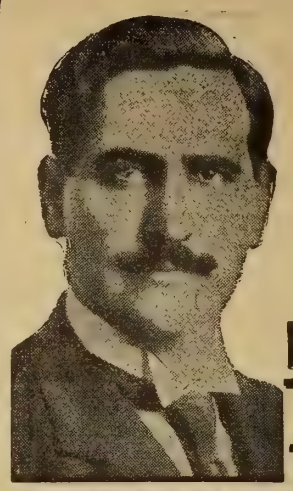
Heifers, common to good	5.25@6.00

BUTCHER CATTLE SELLING WELL.

A healthy tone is being shown in the



Bill Galloway Says:

"I Want to Send YOU One of My 1913 Model Spreaders Right to Your Farm—FREE!"

Not One Cent to Pay—No Bank Deposit

Thirty Days' Trial Absolutely FREE!

Just Send Me The Coupon—Do It To-day

DON'T send me a dollar—*no, not one cent!* Keep your money—*let me take the risk.* And I'll do it willingly. Just tell me—*"Galloway, I'm willing to give your new 1913 spreader a good, fair trial at your risk." That's all I ask.* You'll get the spreader just as quick as I can ship it. Test it any way you want to. Then decide whether you want to keep it on this amazingly liberal proposition or send it back and let me pay the freight both ways. I'll put it squarely up to you and I'll accept your decision without a word or question. Now let me tell you briefly

Why I Am Making This Offer:

Now, I know that you can tell more about my spreader in a half-hour's actual use than you could by reading all the ads I ever wrote. So I'm just going to send you the spreader itself and let you be the judge. I want you to put it through every test you can think of. Take the toughest, tramped-down, unrotted slough-hay manure from the calfyard. If it's frozen, so much the better. Drive out into the field—get your team into a fast trot AND SLAM IT IN GEAR! Do that *again* and again, and AGAIN! Then, if you can find any fine, powdered manure, load it in and see how it handles that.

Notice how easy it is to load the low-down body. See how easily two horses can do the work it uses up three or four horses to do with the big, horse-killing types. Examine the exclusive patented features. It's the only double-drive spreader on the market having power furnished by BOTH wheels alike to move the load and run the beaters. It's the only roller-bearing spreader. It's the only endless apron, force-feed spreader. This feature alone makes the Galloway worth $25 more than any other spreader in the world. Notice how the pull between the wheels is brought entirely upon the reach, making it not only the lightest, but the strongest and most durable spreader known. Use the Galloway a whole month. If that isn't enough, say so, and I'll let you keep it for two or even three months. Then, if you can't honestly say—"Galloway, this is the best spreader in the world"—then I want you to ship it right back to me and I'll cheerfully pay the freight both ways, so that the trial won't cost you one single cent.

The Only Way Is the Galloway

Selling Direct From Factory to Farm!

If you do decide to keep my spreader, after having had the free trial, I'll put $25 to $50 in your pocket right at the start. You don't pay any middlemen's profits—you don't pay any salesman or dealer to help you make up your mind. The whole deal is just between you and me—AND YOU ARE THE SOLE AND ONLY JUDGE.

Now, Here's Something I've Never Done Before:

I'm going to make you a better proposition for 1913 than anything I've ever made. I'm going to tell you how you can get your spreader PARTLY OR ENTIRELY FREE! There's no work, no soliciting, no canvassing—I mean exactly what I say. Can't tell more about it here, but I'll tell you all the details in a personal letter when you write me.

Here's the Kind of Letters I Get Every Single Day

Gentlemen:—I received my spreader and came out home and got a neighbor to help me start it. We loaded a load of light manure and drove on solid ground. The machine went off without a hitch—just fine. So we drove back, and loaded a load of heavier manure and tramped it and drove to the field on a piece of soft plowed ground, and my team weighing 2325 lbs. just went right through with it. My neighbor said he could not see any difference in the draft when in gear or out. From what I have seen the No. 4 is as good as you say. Very truly,
Elk City, Kan. J. D. GRAY.

Gentlemen.—The more we use the spreader the better we like it. One of the most attractive things about it is its light draft; two horses take it easily, loaded full up, over soft ground. Yours very truly,
Wappacoma, W. Va. E. HERRIOTT & SON.

OHMSTEDE'S GREAT SALE

SHORT-HORNS AND D. S. POLLED DURHAMS

WILL BE HELD AT FARM, 2 MILES SOUTH-WEST OF

GUIDE ROCK, NEBRASKA, WEDNESDAY, MARCH 19th, 1913.

IN this sale will be offered one of the very choicest offerings of young Short-horn females that has or will be sold this season in Nebraska. They are of splendid conformation, well grown and thrifty. Many of them are safe in calf to Butterfly King, 2d prize bull at Nebraska State Fair, 1911. He is one of the good ones of the country. A few nice Short-horns and a few D. S. Polled Durham bulls will be listed. Some that are good enough to head any beef herd. We want to particularly impress you with the fact that there is not an old cow in this sale, or a poor one. Everything two and three years except three yearlings. Come to this sale. It is the day following Smith & Son, Tobias, Neb., and good train connections. There are 25 of these females and about ten bulls. Plenty of good ones. Mention The Homestead and write for the catalog today. Address

Col. John Brennen, Auctioneer.

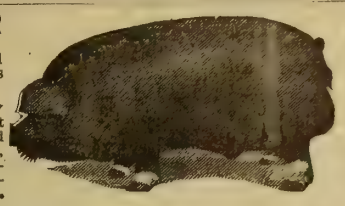
JOHN OHMSTEDE, Guide Rock, Nebraska.

W. H. COOPER, LIVE STOCK AUCTIONEER

WE maintain one of America's greatest herds of strictly big-type Polands with big-type blood lines. We have in connection with it, one of the most complete plants for the business known. Twenty sows in our herd average over 650 pounds each including several yearlings.

50 HEAD OF BRED SOWS AVERAGED $65.00 in our February 4th sale, mostly gilts. We are booking orders now for June delivery, gilts and boars of this spring's farrow, at $20.00 and $25.00 each, out of these sows, which are of the biggest blood lines known, and sired by our big herd boars, including the great Big Expansion, weighing 800 pounds at two year old, and Big Bone 2d, and other boars of like breeding. Can furnish boars and gilts unrelated. Guarantee everything as represented or it may be returned and money refunded. Everything recorded free to purchaser.

W. H. COOPER, HEDRICK, IOWA.



butcher cattle trade. Prices are from 10 to 25 cents higher on the medium to best grades of cows and heifers than late last week and on a remarkably high basis for this season of the year. The advance is most pronounced on good handy-weight heifers, which are scarce and in urgent demand. A spread of from $5.25 to $6.35 is taking most of the decent to good fat cows, but prime heavy fed cows have sold in carload lots this week as high as $7.25. Heifers selling around and under $6 are either on the stocker order or of very good breeding quality, most of the right good to choice fat heifers selling at $6.25 to $7.40, and choice to prime up to $7.50 to $8. Canner cows are selling largely from $3.75 to $4.15 and cutter grades from $4.25 to $4.60. Most bologna bulls are selling from $5.80 to $6.10 and beef bulls from $6.25 to $6.65, although prime beef bulls are quotable to $7 or better. Good stocker bulls sell up around $5.75, canners from $5 to $5.50. Calf receipts continue moderate and that trade is holding up well, but the season for increased supplies of vealers is near and many traders see breakers ahead. However, high lambs and hogs and the hunger of country buyers for strong-weight calves bred along decent beef lines are strengthening factors and will continue so. Good to choice vealers are selling from $10 to $10.25, fair to good light calves from $9.25 to $9.75 and most heavy calves from $6 to $6.50, though choice, fat, big weights are quotable to $8, high-class feeding steer calves to $7.50 and big, common, coarse calves range downward to $4.75 to $5.50. Quotations:

BEEF COWS.

Choice to prime fed cows	$6.50@7.25
Good to choice cows	5.85@6.50
Fair to good cows	5.25@5.85
Common to fair butcher cows	4.00@5.25

CANNERS AND CUTTERS.

Good to ch. heavy cutters	$4.35@4.50
Fair to good light cutters	4.15@4.35
Fair to good canners	3.90@4.10
Poor to fair canners	3.60@3.85
Old, thin, weak shells	3.10@3.50

HEIFERS.

Choice to prime heifers	$7.35@8.00
Good to choice fed heifers	6.90@7.35
Fair to good heifers	6.15@6.90
Common to fair heifers	4.75@6.00

BULLS.

Good to choice bolognas	$5.90@6.10
Light and medium bolognas	5.65@5.85
Canner and poor light	4.25@5.50
Good to choice butchers	6.15@6.40
Choice to fancy beef	6.50@7.00

VEAL CALVES.

Good to choice vealers	$10.00@10.50
Fair to good light vealers	9.25@10.00
Strong weight vealers	7.25@ 8.75
Good to choice stock calves	6.75@ 7.50
Inferior to fair hvy. calves	4.50@ 6.00

HOGS.

Packers are still running a bear campaign, but much of the time their efforts are abortive. They have an occasional inning, but meet few opportunities to "shoot the market to pieces," their favorite pastime at this season. Early in the week a new high level for the year was reached at $8.70 for light shipping grades, but the resultant 8-cent country market expanded supply and gave packers a chance to take off 20 to 30 cents. This led to putting away a lot of stuff behind padlocks because it could not be sold except at a loss and as country buyers suspended operations simultaneously a sharp reaction occurred, Friday's trade being 20 to 25 cents higher than the low spot of Thursday. During the week $8.30 to $8.60 took the bulk, light hogs claiming a slight premium, owing to scarcity and strong eastern demand. Fresh meat trade is making prices and provision values are considerably out of line with live hogs. Eventually the two markets will get together, but bearish sentiment regarding hogs is not audible, as packers are accumulating nothing and the winter packing season is over. A series of choppy markets is expected during the seeding period. Today's closing quotations:

Bulk of sales	$8.40@8.55
Mixed, 215-250 lbs	8.30@8.45
Mixed, 170 to 200 lbs	8.40@8.50
Medium weights	8.40@8.45
Light butchers	8.45@8.55
Heavy butchers	8.40@8.50
Light shipping	8.45@8.60
Heavy shipping	8.35@8.50
Heavy packing	8.20@8.35
Rough heavy packing	8.05@8.20
Throwout packing sows	7.70@8.00
Fair to choice light	8.35@8.55
Light-light, 135-165 lbs	8.25@8.50
Pigs, good to fancy	7.50@8.25
Pigs, inferior to fair	6.65@7.40
Boars, poor to good	3.50@4.75
Stags, subject to dockage	8.35@8.80
Government throwouts	5.00@6.75
Government pigs	2.50@4.00

Live mutton supply in the West this week has been about the same as the week previous and slightly less than a year ago, the six-point total being 210,000, against 211,000 the week previous and 219,000 the corresponding week last year, but prices have been subject to rather sharp fluctuations. While the supply figures do not look burdensome an analysis of the offering discloses reasons for the sluggish tons displayed by the lamb trade during most of the week. A vast proportion of the run, both here and at Missouri river markets, has consisted of lambs, 90 per cent or more of which have been of killing quality and have sold for slaughter. This, taken into consideration with the fact that lamb prices are averaging more than $2 per hundredweight higher than a year ago and that the period of meat abstinence on the part of a considerable portion of the public is on, and that weather conditions during a part of the last fortnight have been of a brand inclined to further the contraction of meat consumption, removes surprise at the sluggish and droopy tendency of the trade. Fat lambs had a 10 to 15-cent advance today on a meager supply, but still showed 10 to 15-cent declines from a week ago.

Matured mutton trade has not performed at all discreditably. Though sheep closed 25 cents lower last Wednesday they sold higher early in the week and at the finish, closing fully as high as a week ago and closer to fat lamb values than any preceding time this season. There is only one factor that seems at all likely to keep matured sheep from selling still closer to lambs. This is the probability of a continued liberal quota of heavy lambs in the run which would enable buyers to worry along with fewer sheep and yearlings than would otherwise be needed.

Sentiment in trade circles is still conservatively bullish on the sheep and lamb situation, although it is realized that conditions are such as to require careful attention on the part of feeders, and such as to create a period of very "choppy" markets unless the supply on feed is conservatively marketed. Bullish factors underlying the trade now are the very light supplies available in territory contiguous to eastern markets, assuring a good shipping demand at Chicago, the strong position of the cattle market, rapidly advancing hog prices and marked scarcity of lambs left in feeders' hands in most all sections other than Colorado and western Nebraska. These conditions are counted upon to maintain a high level trade if Colorado offerings are properly strung out during March and April. In response to a good market and weather conditions that favored an early fattening of much of the supply on feed, the February run of Colorado-fed lambs has been unusually heavy, but March receipts from that source will be liberal and if Colorado and western Nebraska feeders should have the unfortunate conditions of any extended period of bad weather to contend with at this juncture, the exodus from feed lots to market would doubtless be so rapid as to cause a sharp downward revision of lamb prices at market, and a probable scarctity of supplies in April and the fore part of May. March trade will depend largely on weather conditions. Quotations follow:

Lambs, good to prime handy	$8.35@8.75
Lambs, good to prime heavy	7.65@8.25
Lambs, fair to good natives	8.10@8.50
Lambs, common to fair	7.65@8.10
Lambs, culls	6.50@7.50
Wethers, good to prime	6.40@6.95
Yearlings, fair to ch. handy	7.25@7.85
Yearlings, fair to ch. heavy	7.00@7.50
Ewes, fair to best handy	5.75@6.40
Ewes, fair to prime heavy	5.75@6.40
Ewes, culls	4.00@4.75
Bucks	4.25@4.75
Lambs, feeders and shearers	7.50@8.25
Wethers, feeders	5.00@5.50
Yearling wethers, feeders	6.00@6.50

THE IMPORTANCE OF GOOD SIRES.

To the Editor of The Homestead:

This doctrine has been preached so often by the agricultural and live stock journals that its repetition ought to be unnecessary, but like some other forms of truth constant reiteration is required to insure acceptance. The correctness of this statement will be readily admitted by most stockmen, but while admitting its truth many do not act upon it. Experiment stations, corn clubs and fruit shows are emphasizing the necessity of good seed and faith in the correctness of this doctrine is what causes farmers to pay prices for prize ears of corn. Sentiment and enthusiasm may have influenced such sales to some extent at least just as these elements have been known to enhance the value of noted bulls or horses in public sales. But making proper allowance for these fictitious agencies of current prices, it is the belief in the ability of the noted bull or horse or the prize ear of corn to reproduce its excellent qualities that causes it to bring an exceptional price. The faith in the reproduction of inherited merit is the foundation of all agricultural improvement and progress.

With the knowledge of the value of good sires, it is very strange that so many farmers and stockmen are content to use scrubs or indifferent pure breds, for not all pedigreed live stock should be retained as breeders. Purity of pedigree may reproduce itself, but it does not always reproduce quality and excellence in form.

It is not the intention of this article to intimate that every farmer in buying a bull should strive to get some noted sire or prize winner. There are enough of these to supply all, but what each farmer should require and what his own interest demands is just as good a bull as he can afford to buy, and in making his selection he should remember that an indifferent one is dear at any price. This is true when applied to men who are breeding grade cattle and should appeal with greater force to those who have pure-bred herds. No cattle breeder ever achieved any more than ordinary success who did not have a high-class bull at the head of his herd, and the ownership of excellent sires explains the difference between success and failure.

A greater familiarity with Short-horns than any other breed of live stock naturally calls to my mind some of the noted sires of that breed. It is not the purpose to give any extended list of those noted bulls, though a long list could easily be given, but rather to name a few of both early and modern days. No bull of his day did more to improve the Short-horns of America than Imported Duke of Airdrie. His sons and grandsons were extensively used in the herds of Kentucky, Ohio and elsewhere and one of the most impressive of these sons and a great show bull withal, was Airdrie 2478 used with such signal success in the Rose of Sharon herd of Abe Renick. Among the later bulls of outstanding excellence as sires I will mention Gay Monarch, Sharon Marshall, March King, Choice Goods and Whitehall Sultan. Sons of the two last-named bulls now at the head of many prominent herds of Short-horns and the blood of no bulls of modern days has been more widely distributed.

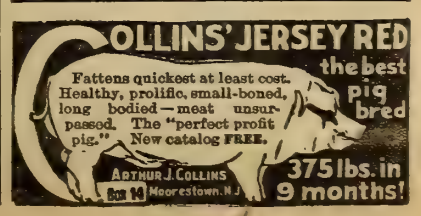
There are no means of estimating the value to a breed of such sires, and indeed to the cattle of the farms generally, for the blood of these bulls descends in various and ever-increasing channels from pure breds to grades. So the farmer who is raising grade cattle has every encouragement to use good sires and so produce a better and more profitable class of beef cattle. Short-horns have done much the larger share in laying the foundation and fixing the type of the beef cattle of the country and as the breed is better and stronger now than at any previous time in its history, it can be relied on by stockmen to aid in restocking the farms with a profitable class of beef cattle. In order to bring about this desirable result only bulls of a good type should be used. In raising steers it is quite important to have good sires.

B. O. Cowan.

The average price at which national forest timber was sold on the stump by the government last year was $2 per 1,000.

A comfortable home is the first essential in progressive farming. Farming cannot be a pleasure without it.

Spring has come because the first of March has, but it may be some time before winter is over.



DATES FOR LIVE STOCK SALES.

FIELD NOTES.

Wm. Graff, Minier, Ill., is offering some bargains in imported and home-bred Percheron and Belgian stallions as per his advertisement elsewhere in this issue.

Ralph Thurston, Osceola, Iowa, has an imported five-year-old black Percheron stallion on which he is naming a price in his advertisement appearing elsewhere in this issue of The Homestead. Mr. Thurston also has a number of other Percherons for sale at right prices.

A. G. Messer, Grundy Center, Iowa, is offering nine Angus bulls for sale in his advertisement that appears in the regular Aberdeen Angus column elsewhere in this issue. These bulls have quality and breeding and Mr. Messer is offering them at farmers' prices. They were calved from October, 1911, to May, 1912.

In the Duroc Jersey department of this week's Homestead will be found the advertisement of A. G. Messer, Grundy Center, Iowa, who has ten head of gilts of last March farrow. They are bred to farrow this March and April. They have length, bone, size and quality. Crimson Wonder Again breeding predominates in the herd.

Elsewhere in this issue appears an advertisement of Coe's humane pig forceps, put out personally by Chas. A. Coe, Atlantic, Iowa. Mr. Coe has had thirty-five years' experience in this line of work and the forceps advertised he states are the only self-adjusting forceps on the market. They are recommended by veterinarians generally.

Among recent sales of stallions Taylor & Jones, Williamsville, Ill., report the following: "J. W. Coffman, DeWitt county, Illinois, an imported Percheron; J. L. Ulrich, Stephenson county, Illinois, an imported Percheron; Keesse & Staples, Hamilton county, Iowa, an extra good imported Percheron, and also the Belgian stallion that was grand champion at the 1912 Illinois State Fair, and Lahr & Achenbach, Christian county, Illinois, an imported Percheron.

E. J. Augspurger, Pulaski, Iowa, is advertising red and roan Polled Durham bulls for sale. He has a three-year-old roan bull and several calves that are choicely bred. Write him, mentioning The Homestead.

A letter from A. Latimer Wilson, Creston, Iowa, says his last importation of stallions this season will leave Europe on March 5th and are due in his barns at Creston, Iowa, March 20th.

Sweany Bros., Kidder, Mo., write that they have sold the bred Duroc gilts they were advertising and have only fall pigs to sell. These are all immune and are choice. Note advertisement elsewhere in this issue and when writing them kindly mention The Farmer and Stockman.

Henry Field has started the publication of a monthly horse organ called "Field's Seed Sense." This booklet will be mailed monthly throughout the United States free to those interested and will be of great interest to all buyers of seeds and is written in such a way as to make the reading of it a pleasure. Mr. Field has made a remarkable career as a seedsman and we welcome him as a brother in the publishing business. We suggest that all our readers get on the list of his paper. His address is Shenandoah, Iowa.

With this issue Mrs. Chris Lionberger, Humboldt, Neb., starts an advertisement offering the very choicest sort of White Wyandotte eggs for hatching at the extremely low price of $1.25 per fifteen. This flock has been built up from the very best foundation material that money and judgment could secure and there is certainly no excuse for anyone to offer for not having high-class and profitable poultry when seed stock may be secured at this price. Our readers are perfectly safe in sending money with order for these eggs, and when doing so please mention this paper.

The King Separator Works, Buffalo, N. Y., whose advertisement appears in the dairy department of this issue, agree to ship one of their separators to any farmer or dairyman in the United States on ten weeks' free trial without a penny being sent in advance or a deposit of any kind made. It is their purpose to convince every prospective buyer of a cream separator by actual demonstration in his own home that it is most efficient and all that is claimed for it. The King separator is backed by the life-long guarantee which protects every customer. We suggest that our readers write them, mentioning that they saw the advertisement in this paper.

The Wisconsin Incubator Co., Racine, Wis., is making a remarkable offer on a large capacity hatching outfit. This offer includes one of the prize-winning Wisconsin incubators of 175-egg capacity, made of genuine California redwood with three walls, dead-air space between, copper tanks and boilers, self-regulating hot water heating system, thermometers, egg testers, etc. In fact, everything complete ready to use. Also one of the standard Wisconsin brooders with scratch yard and runway for very small chicks. Both machines are delivered, all freight charges paid, to any town east of the Rocky mountains for only $10.85. See advertisement in the poultry department of this issue and write the company, mentioning that you saw the advertisement in this paper.

Recently a man from the United States Department of Agriculture visited the Sutton Seed Company's plant at Mason City, Ill., without saying who he was and getting samples of their seed corn made laboratory tests on it for moisture and germination. His report shows an extraordinary high percentage of germinating powers. Last year this firm's supply was sold out by the middle of February and they returned $21,000 in cash that was sent them in orders which could not be filled without substituting, and which they would not do. A copy of a very interesting book published by them, entitled "Sutton's Book of Corn," may be obtained free by writing them at Mason City, Ill. See their advertisement that appears in the horticulture department of this issue.

The Malvern Horse Sale.

On Saturday, March 8th, at Malvern, Iowa, will occur the second annual public sale of registered Percheron and Shire stallions and mares made under the management of Fred Durbin, and it promises to be one of the best sales to be made this spring. There will be twenty head of registered stallions and mares in this sale, one pedigreed black Mammoth jack and forty head of high-grade draft mares, gelding, fillies and colts.

W. C. Seybold, Auctioneer.

Elsewhere in this issue of The Homestead is a unique advertisement calling attention to the ability of Col. W. C. Seybold, Harvard, Neb., as an auctioneer. The peculiar part of this advertisement is that Colonel Seybold will buy or sell anything, from a herd of pure-bred stock to a stock of merchandise. He has confidence enough in his ability as a salesman to buy these stocks and sell them again at auction and has made handsomely by so doing. This advertisement will not appear again, for some time at least, and those interested should address Colonel Seybold at once. Mention The Homestead when you write and kindly notice the advertisement.

Two Hundred Strawberry Plants for $1.

Strawberry plants that grow and do best are being offered by our old friend, J. L. Todd & Co. These people know about strawberry plants from A to Z. Their many years of experience in this business have taught them that great care must be exercised in packing the plants for shipment in order to insure successful planting when received by the customer. This firm spent considerable money in getting up a book to educate their customers in planting and growing small fruits, and they have printed several thousand copies of this book. Anyone sending $1 for their special collection of strawberries offered in this paper will receive a thirty-two-page catalog describing the fruit and, in addition, will also receive the book mentioned above. Address J. L. Todd & Co., R. R. 3, Des Moines, Iowa.

The Howell Riding Harrow.

A booklet issued by the Springfield Harrow Co., 1010 Jackson street, Springfield, Ill., containing a large number of fac-simile letters from users of the harrow is one of the strongest endorsements for any implement we have seen. This harrow is sold direct to the consumer, is of steel and malleable iron throughout, has no bolts or taps to lose, is built in three sections any or all of which can be raised or lowered at will, teeth can be set to any pitch, is close hitched, giving it an easy pull, has coiled spring shock absorbers and is guaranteed to give the most complete satisfaction. It is a complete riding harrow in every way, is flexible and adjustable to any kind of ground, sections can be raised to pass through any gate. Write for a catalog to Springfield Harrow Co., 1010 Jackson street, Springfield, Ill., for catalog and particulars, as per the advertisement elsewhere in this issue.

Hickory Cluster Farm Duroc Sow Sale.

Elsewhere in this issue of The Homestead will be found the advertisement of Smith & Rodgers, Springfield, Ohio, offering Duroc sows for sale on March 24th. They will sell forty-five head of high-class bred sows of the most approved breeding and quality. The sows are by Orion Chief, Mt.'s Col., Col. Pilot Wonder, Col. Beabout, Premier Col., Pal's Col., Royal E. Nuff, The Professor, Chief's Col., Instructor, Kelly's Pilot Wonder and many other noted boars. They are bred to Col.'s Pilot Wonder, grand champion of the Ohio State Fair, 1912; Mt.'s Col., grand champion of the Pennsylvania State Fair, 1912, and many other of the most noted sires of the breed. The sale will be held at Hickory Cluster Farm and better arrangements have been made for transferring guests from the traction line to the farm than ever before. The same kind of a fine dinner will be served and all visitors will be entertained in royal style. This is a golden opportunity to buy a few extra good sows to fill the place of those that have already lost their pigs at home. The offering is a very select one and many of them are sows that Smith & Rodgers intended to keep for their own use, but to make this sale an attractive one they have put these good ones in and they will be a credit to the Smith & Rodgers herd and stuff the best breeders in the land can use. H. E. Browning will represent The Homestead and bids by mail or wire should be sent to him in care of the firm. Colonels Igleheart, Reppert and Irwin, auctioneers. For catalog address Smith & Rodgers, Springfield, Ohio.

Galesburg Short-horn Combination Sale.

An attractive offering of Short-horn cattle will be made at Galesburg, Ill., Tuesday, March 25th, when practically fifty head from the herds of A. J. Ryden, Abingdon, Ill.; Chas. T. Nelson, Blandinsville, Ill.; Wm. Kreigh & Son, Knoxville, Ill., and H. G. Bowers, Elmwood, Ill., will be submitted. The gentlemen making this sale are among the best known and most reliable breeders in Illinois and they have selected for the coming event a very desirable lot of young, well-bred cattle. Mr. Nelson is contributing eighteen head, including some very attractive females and two good young bulls; also Lord Robin, a Clipper, and Hillsdale Baron, a promising prospect. Mr. Ryden sends forward ten head, seven cows and heifers and three bulls. Sons and daughters of Village Sultan are included in the lot, among them some attractive propositions. Mr. Ryden can be depended upon to put his cattle in the sale ring in a satisfactory condition. Kreigh & Son list ten head, including an exceedingly attractive May yearling bull calf by Village Sultan, out of Flora Knight 2d, that should attract attention sale day. Two of their females will sell with calves at foot by Village Sultan and all are bred to him or Juno's Royal. Mr. Bowers sells ten head, including some strong young bulls of the right kind. More detailed information regarding all these cattle will be given in later issues. This sale is the day preceding that of Rigg & Glasgow, at Galesburg, Ill., so that prospective buyers will have practically 100 head from which to make selections, a fact that should appeal to the public. There will be cattle to suit all wants and they come from reliable breeders. The initial advertisement appears elsewhere in this issue. Look it up and write for a copy of the catalog to A. J. Ryden, Abingdon, Ill., mentioning The Homestead when you write.

Shire Stallions and Mares.

Those of our readers in search of some high-class Shire stallions or mares will do well to correspond with Ed H. Magowan & Son, Gibbon, Neb. These gentlemen maintain one of the highest-class studs in the West and the stock for sale at this time is of this high order. Magowan & Son have purchased top stuff at all times and they are good stockmen, hence they have this sort to sell. Some choice young stock of good breeding ages are for sale and we would urge that those interested write at once for full prices and description. Mention The Homestead when writing.

Choice Short-horn Bulls and Heifers.

J. F. Egger & Son, Roca, Neb., have for sale just now a very choice line of Short-horn bulls and heifers of choice blood lines. The young cows of breeding age are bred to a choice young bull by the great Snowflake. He is one of the best sons of the old bull and comes of a long line of choice stock on the side of the dam. The young females are of a heavy-milking strain, with some fashionable Scotch tops. The prices on this stock are very low for the quality offered and those interested should be quick to grasp this opportunity. The future outlook to the cattle business is very bright and the time to purchase is now. Quick action in this matter will mean good profits. Mention The Homestead and adress as above. See advertisement elsewhere in this issue.

Steel Wheels Economical.

Their practical value is further vouched for in the experiences of those who find that wide-tired steel wheels do not cut the pastures, do not become "mired" in soft fields or muddy roads and do not cause the heavy pulls that "rutty" roads have always meant for narrow tires. An agricultural college in a recent bulletin said: "Low, wide-tired steel wheels will give any farmer better equipment for his work. Under all conditions of the field and nearly all conditions of the road it is estimated that broad-tired steel wheels pull from 30 to 100 per cent lighter than the narrow tires." See advertisement of the Electric Wheel Company, Quincy, Ill., elsewhere in this issue.

Wiles Makes Fine Sale of Red Polls.

Luke L. Wiles, Plattsmouth, Neb., recently sold to C. S. Tremewan, Gold Creek, Nev., one of the nicest lots of Red Polled cattle that has ever left Nebraska. Mr. Wiles' herd is one that has always been particularly high class and this draft, which included a full car load of nineteen head, eighteen females and a bull, were all good representatives of this good herd. Mr. Tremewan made this purchase after visiting several herds of good cattle, which speaks very highly for the class of stuff offered. Mr. Tremewan is to be congratulated on his good selection and the writer and The Homestead wish him the best of success with this fine young herd in their new home. Mr. Wiles also has for sale a number of choice young bulls, three of which are sired by a son of the noted Closson, and two are by his famous herd bull, Happy Jack 2d. This last named bull is certainly one of the greatest in the corn-belt states. He has never been shown in the show rings, but he certainly has "shown" that he is some breeder. For full particulars concerning this young stuff address Luke L. Wiles, Plattsmouth, Neb., and when you write mention The Homestead.

Ohmstede's Short-horn and Polled Durham Sale.

On March 19th, the day following the Short-horn sale of H. Smith & Son, Tobias, Neb., will be held a sale of Short-horn and Polled Durham cattle by John Ohmstede, Guide Rock, Neb. In this offering there will be about thirty-five head, twenty-five of which are choice young females. Every one of these females is of very desirable ages, as all except three that are yearlings are either two or three years old. They are thrifty, well-grown cattle and in nice breeding shape. They are also all of good blood lines, as they are descended from good foundation material and have been improved with the selection of good bulls. Some of the cattle carry a liberal percentage of Scotch breeding, and all are Scotch-topped stuff. There are a few Polled Durham bulls and a number of the young cows are bred and safe in calf to the second-prize Polled Durham bull at the Nebraska State Fair two years ago. These cattle are positively the right sort of stuff to buy and those of our readers who are looking for some good cattle should not overlook this opportunity of getting in and getting in right. The future of the cattle business is certainly in the very finest kind of shape and the man who buys now will have good reason to congratulate himself a little later on. The H. Smith & Son sale will contain a lot of good stuff and we would like to see a good crowd at that place and all those who do not get supplied at that place should certainly make the trip to the Ohmstede place, as the train connections are good and, as said before, a good offering will be presented. Send in your name at once for the catalog that it may be sent you as soon as out. Do this at once, as delay may mean that you will not receive it in time. Mention The Homestead when you write.

Rigg & Glasgow's Short-horn Dispersion.

Owing to a dissolution of partnership the Short-horn herd of Rigg & Glasgow, Sterling, Ill., will be dispersed at public sale at Galesburg, Ill., March 26th, the day following the combination offering of Messrs. Ryden, Nelson, Kreigh and Bowers. A dispersion sale is always the place to secure plums and the coming sale will be no exception to the rule. The senior member of the firm, W. B. Rigg, has long been known as one of the most reliable breeders in Illinois and the forty odd head of cattle that will be presented to the public for appraisal at Galesburg on March 26th are a credit to his judgment and his skill. From the standpoint of blood lines they are very attractive and their individual merit is in keeping with their breeding. The get of such good sires as Baron's Pride, Trout Creek Champion, Golden Charity Prince, Shenstone Albino, King Cupbearer, Penan Diamond and others are listed. It is not a speculative offering, but represents Mr. Rigg's best efforts for several years and should certainly meet with appreciation sale day. Eight cows will sell with calves at foot, the majority by the Forbes-bred Pride of Linwood, and all females of breeding age have been served by this bull. Ten outstanding two-year-old Scotch heifers are in the list and they form a decidedly attractive lot, as do eight yearling heifers. The prospective bull buyer will find something attractive at this sale. The two-year-old Sultan Archer is a sappy white bull and combines the blood of two champions, Whitehall Sultan and Ceremonious Archer, and is a bull that should be looked after sale day, as he is a breeding proposition. He has been used some in the herd. Other good young bulls are listed and some strong bull prospects sell with their dams. The cattle in the offering can be commended to the buying public without reservation. They will stand inspection and give satisfaction. The catalog tells the story.

Send for it today to Rigg & Glasgow, Mt. Sterling, Ill., mentioning The Homestead when you write. The advertisement appears elsewhere in this issue.

Many farmers hesitate about buying a modern and improved corn planter, believing the price is out of reach. Our attention has just been called to the fact that the Flying Dutchman planter, undoubtedly one of the best on the market, as it has a very extensive sale, is being sold to the farmers at the low price of $35. This planter is made of very good material and contains the latest improvements. It has two full sets of plates and can instantly be changed from edge drop to a flat-drop planter. Changes can be made to plant two, three or four kernels to the hill without stopping. We suggest that our readers who are interested write to the manufacturers, Moline Plow Company, Moline, Ill., for the Flying Dutchman booklet and mention this paper when writing.

Mudd and Williams' Poland Sale.

The sale of big-type Poland China hogs held by T. H. Mudd and W. E. Williams, at Silex, Mo., on February 18th, was one of the most successful sales held this year, when ages of the hogs listed are considered. On fifty head a general average of $48.93 was made. Each of these breeders contributed twenty-five head and the home buyrs, with those from a distance, absorbed the offering in two hours. The herd boars at the head of the herds these gentlemen maintain were admired by all who are partial to good, big, smooth hogs. Col. Jas. W. Sparks handled the sale to the entire satisfaction of all concerned. Following is a list of the sales:

Oltmanns Bros.' Stallions.

The recent importation of Percheron and Belgian stallions made by Oltmanns Bros., Watseka, Ill., adds a goodly number of fresh horses to their collection and places them in an advantageous position to care for the wants of the trade, so that buyers will find in their stables a decidedly attractive lot of young horses with bone, size and substance. The senior member of this firm resides at Leer, Germany, within a short ride of the French and Belgian horse-producing districts, and is thus in constant touch with the breeders there, giving him exceptional advantages in the way of buying. Oltmanns Bros. sell their horses at close figures, carrying on their business at the minimum of expense, which enables them to give buyers additional concessions, and they back their horses up with a guarantee so liberal that it is out of the ordinary. If you are in the market for a Percheron or Belgian stallion or a span of mares get in touch with Oltmanns Bros. Their advertisement appears elsewhere in this issue.

Good Short-horn Bulls.

W. W. Oliver, Guilford, Mo., proprietor of the Sunnyside Farm herd of Short-horn cattle, is advertising elsewhere in this issue three good young Short-horn bulls that are just of serviceable ages. He prices these at prices that should be attractive to those wanting good young stock bulls. They are sons of Merry Sultan, a Bellows-bred bull by their Whitehall Sultan bull, Chief Sultan. His dam was Merry Sylva, dam of the $1,060 Merry Goods. Two are out of cows by Count Ramsden, a good son of the two-time champion, Lavender Viscount. Mr. Oliver's bulls are thick, blocky fellows, are well grown and are reds with the exception of one that has just a little white. As he has used pure Scotch sires his herd is practically Scotch and the bulls he is offering carry 90 per cent or more Scotch blood. Mr. Oliver would like to have you come and see these bulls, as he knows they will please you. Guilford is on the Great Western railroad north of St. Joe, Mo., and is easily reached over this line or the Wabash via Conception, the junction point of the two roads. Note Mr. Oliver's advertisement elsewhere in this issue.

Homemade Creamery Butter.

A big problem for the dairyman has been solved in Owatonna, Minn. The results obtained with the Owatonna Home Creamery have proved that it is possible to make the finest grade butter at home with but little work. The machine responsible for the good work is a churn, a ripener and butter worker and gatherer, all in one. It sells at a price about equal to that of the ordinary churn. Butter made in it has taken first prize at the National Dairy Show in Chicago, Ill., and at a number of other shows through the country. For sanitary principles it has the highest type of construction. Butter can be made in it without the hands touching the cream or butter. While this machine is equal to the big creamery plant in every respect, it is made in all sizes, so that it can be used profitably by the owner of only three cows as well as the largest dairy herd. The ordinary farmer who milks from eight to a dozen cows can make from $400 to $500 more per year by making his own butter than by selling his cream. The president of this company, Harvey P. Gardner, has just issued a book, "Dairy Dollars," which makes interesting and instructive reading for every owner of cows. He will be glad to mail a copy free to anyone who will write him, mentioning this paper.

Luckhardt's Percheron Dispersion.

On next Wednesday, March 12th, L. H. Luckhardt, Tarkio, Mo., will disperse his stud of registered Percheron stallions and mares. Twelve mares and fillies, eighteen stallions and four Mammoth jacks are listed. The mares have been worked regularly and have been regular producers, as is shown by their produce in the sale. They are the big, drafty kind that weigh from 1,800 to 2,100 pounds. The mature stallions are ton horses that have proven sure foal getters and sire high-class colts. Remember the sale is next Wednesday and will be held in town in Travis' new implement building.

Stallions at Homewood Stock Farm.

The time is at hand when prospective stallion buyers must be making their selections for the coming breeding season, and they will find at the barns of the Homewood Stock Farm, at Homewood, Ill., a strong lot of imported and home-bred Percheron, Belgian and Shire stallions and mares from which to make their selections. Metz & Sons make their importations early in the season, so that when the heavy buying time approaches they have their barns filled with a lot of seasoned horses, thoroughly acclimated and ready for heavy work on the stand. Their last importation landed in October, so that buyers are taking no chances on securing any green, unseasoned horses. Their Percherons are blacks and grays, two and three years old, with size, substance and bone, many of them weighing well over a ton and not fat. Their mares are a strong lot of the approved brood mare pattern, nearly all in foal to imported horses, many of them in the ton class and all possessing plenty of size and weight. In addition to their imported horses Metz & Sons handle a large number of home-bred stallions and mares, not the speculative kind, but horses that have been secured from reliable breeders, many of them the get of imported horses they have sold and which they know to be all right in every way. Their Belgians are the right sort, selected with a view to getting the kind that will be most profitable to the American farmer, and their Shires, while they do not handle a very large number, are the kind that should be in demand. Metz & Sons back up their horses with a broad guarantee and invite the inspection of discriminating buyers. They are easy of access, being located on the main line of the Illinois Central railroad, twenty-three miles south of Chicago, with trains nearly every hour. Their advertisement appears elsewhere in this issue.

Percheron Stallions and Mares.

Elsewhere in this issue P. J. Eggers, Denison, Iowa, advertises some good Percheron stallions and mares for sale. He also has some good Belgian and Shire stallions that he is offering. He is making prices on these horses that will surprise you. Write him at once and kindly mention this paper. If possible go and see these horses.

The New Hudson Auto.

The new Hudson car, as advertised on page 2 of this week's issue, is a beautiful car. To illustrate how the car will stand the bumps and jolts of the road is the fact that before it was publicly announced it was given a 20,000-mile test, which consumed approximately nine months. During this test the car was driven at train speeds by a racing driver, whose services were secured for the purpose, and he endeavored to smash the car, if that were possible. He went up into the Allegheny mountains and through them from Pittsburgh to Philadelphia by the worst known roads—the passes against which motorists are warned, unless they are expert drivers and their cars are built for the roughest usage. The car conquered the mud of Illinois, the sand of Michigan, the sticky gumbo of Missouri and Iowa and the entire test covered the worst road conditions of ten states, the Allegheny mountains and southern Canada. When the long trip was finished it was equivalent to 40,000 miles of the average farmer's driving, or equal to four years' use in his hands.

A Great Company.

A statement contained in the page advertisement of the Chicago House Wrecking Company under the head "Explanation" will undoubtedly prove interesting to our readers at this time, since the month of March is the time when our readers figure very largely on repairs on buildings, fences and homes and, in fact, all around the farm. The statement is as follows: "Our mammoth plant covers forty acres and our list of customers is numbered by the hundreds of thousands and include people from every walk in life. We sell practically everything under the sun at unbeatable prices. We buy our goods at forced sales, taking advantage of sheriffs', manufacturers' and auction sales. In this way we can sell brand new, clean, high-grade goods at prices in many instances even less than the cost of manufacture. Our stock includes everything for the farm, home and personal use, building material, lumber, roofing, doors, millwork, fencing, hardware, plumbing, heating apparatus, furniture, household goods, clothing, shoes, in fact, every single article needed to clothe a man, woman or child; sporting goods, harness and vehicles, jewelry, sewing machines, groceries, etc. You cannot think of a single manufactured article but what we can supply it to you at a saving in price." We feel sure that our readers who are in need of anything handled by the Chicago House Wrecking Company will be well pleased with the treatment they receive. This company has advertised with us for a number of years and we have not had a serious complaint concerning the character of the goods they put out.

Good Mammoth Jacks.

Delerling & Otto, Queen City, Mo., are offering at private treaty all their prize-winning jacks and jennets with a great string of as good fifteen to sixteen-hand high jacks. All their stock is young, ranging from two to five years old. As these gentlemen pay particular attention to bone, quality and strong constitutions they are good men to buy from. Note their advertisement elsewhere in this issue and when writing them kindly mention this paper.

Battles Announces an Angus Sale.

Otto V. Battles, Maquoketa, Iowa, announces a sale of Aberdeen Angus cattle for May 29th. This herd has probably won as many ribbons during the past five years as any other herd and the announcement of a public sale from this herd will interest every breeder of Aberdeen Angus cattle in the country. About forty head of yearling and two-year-old heifers and cows and a few young bulls will make up the offering. Practically every animal in the sale will be of show-yard character. Full particulars will appear in The Homestead in due time.

Exit the Grindstone.

If there is one field more than another that the farmers of today are backward in it is tool sharpening. The old grindstone is still a standard factor on most farms and is no different than the one in use by our grandfathers seventy years ago. The operator, unless experienced, is likely to spoil more tools than a modern machine is worth. Of late years there has been put on the market a sharpening abrasive that has proved itself many times superior to the grindstone and emery. It cuts many times as fast, leaves a smooth, fine edge, and without any danger whatever of drawing temper. This satisfactory sharpening substance for steel is "Dimo-Grit," manufactured by the Luther Grinder Mfg. Co., 583 Stoh Bldg., Milwaukee, Wis. They not only guarantee the machine for five years, but agree that if any machine is found unsatisfactory for any reason whatever, the money will be refunded any time within one year. This grinder has been adopted by railways and every department of the United States government that uses edged tools. The government reports show that only one-twentieth of the time is required to sharpen tools on this wonderful machine as on the ordinary grindstone.

Anoka Farms' Short-horn Sale.

The annual offering of Short-horn cattle at Anoka Farms, Waukesha, Wis., will take place on Wednesday, April 2d. For this event Mr. Harding has selected forty-five head, twelve bulls and thirty-three females, all but six of Whitehall Sultan line of breeding. Particulars regarding this offering will be submitted in succeeding issues. File your application for a catalog with F. W. Harding, Waukesha, Wis., mentioning The Homestead when you write.

Sane Cholera Preventive Methods.

The entire corn belt is agitated over the great loss of hogs due to cholera. As has already been pointed out in this paper, the best way to save hogs from cholera is to eliminate the chance of their taking the disease. Nine-tenths of the trouble that occurs among hogs is due to a running down of the animal's constituion on account of worms. There is no system of treating cholera that will cure a hog in this condition unless the worms are first eradicated. Attention, therefore, must be given to more sensible treatment if the heavy losses by cholera are to be stopped. There are many remedies on the market whose manufacturers advocate that they are sure worm exterminators. Naturally the need for such a remedy has brought many new products on the market within the last year or two. Utmost care should be taken by hog men in selecting a remedy. One that has been on the market for years and which has demonstrated its efficiency by building up an immense volume of sales, such as the Columbian Stock Powders, will undoubtedly be safest. This remarkable remedy has made almost an unparalled success in the corn belt, and if universally used would have done much to save the many millions of dollars that have been lost. These powders have been used successfully for more than twenty-five years, and it is said of them that they never fail to expel all the worms and invariably do it within twelve hours after feeding. Special attention can be called to the remedy at this time on account of its excellency as a help to brood sows. It keeps them in good condition, insures an abundant flow of pure milk and eliminates the feverish condition which results in poor pigs. The Columbia Hog & Cattle Powder Company, 1433 Genesee Street, Kansas City, Mo., have a half-page advertisement elsewhere in this issue and it would be well for those interested to look it up.

Taylor Offers Short-horn Bulls.

A recent communication received from C. W. Taylor, the well-known Short-horn breeder, Abilene, Kan., states that he is entirely sold out of females at present, but has on hand four toppy Scotch bulls about a year old. Three are red, while the other is a good, heavy-boned roan and all should find homes in good herds. He also has for sale at this time six Scotch-topped red bulls coming one year old in April, May and June and eight red bulls coming two years old from April to June. If in the market for a good young bull write or call on Mr. Taylor at once and inspect the stock. Do so at once, as they will not last long at the prices at which they are being offered. See advertisement and when writing kindly mention The Farmer and Stockman.

Live Stock in Condition.

Animals which have been confined during the winter need something to put their skins and coats in good condition and to kill lice, fleas, etc.; also to cure mange or other diseases which they may have contracted. No other product on the market today will put your animals in good condition more quickly or may be used with better results as Kreso Dip No. 1. It is used on all live stock for killing lice, mites, fleas and ticks and curing their common diseases. It is also invaluable around the poultry, both for putting the birds in good condition and for disinfecting the coops. It is sold by all druggists and is not at all expensive. If our readers will write to Parke, Davis & Co., Dept. of Animal Industry, Detroit, Mich., they will send free valuable booklets on the uses of Kreso Dip No. 1 for all live stock and poultry.

Visiting an Automobile Plant.

The manufacturers of the Studebaker automobile are bringing their plant to our readers through a series of advertisements in our columns. This is the first time anything like this has been attempted, and it will undoubtedly be the means of bringing the buyer and the automobile into a closer acquaintanceship. The Studebaker corporation has taken the farmer entirely into its confidence, not neglecting to explain a single phase of automobile manufacture. Even a casual perusal of these articles cannot fail to impress him with the mechanical magnitude of the great Studebaker organization, which builds its cars entire in its own plant and builds them so well that the farmer who buys one has as much faith in Studebaker automobile quality as he has in the quality that has made Studebaker farm vehicles famous. The third article of this series appears on page seven of this week's issue of The Homestead.

Good Culverts.

In road making, about which much is heard these days, the use of scientifically tested material should prevail against those of indefinite specifications. The thoroughly trained and experienced engineer has a professional pride in the selection of the former, while the latter are the natural outcome of a regime of political appointees. For example, the modern highway expert knows that iron of the highest possible degree of purity is far more resistant to rust than the ordinary product and that culverts, bridge floorings, etc., made from it give promise of two or three times the actual service. He knows further that the difference between purity and impurity in iron and steel is measured by hundredth parts of 1 per cent. It is not enough that a metal should be vaguely recommended as "pure and rust-resisting;" it must conform to certain standard specifications based on the characteristics of the best obtainable material and stating an absolute minimum of foreign substances allowable. This subject has assumed considerable importance of late in view of the increasing number of installations of corrugated culverts, these being preferable in many regions to any form of masonry. In this connection we wish to call the attention of our readers to the advertisement of the National Corrugated Culvert Mfg. Co., Cincinnati, Ohio, appearing elsewhere in this issue.

An Individual Combined Power and Light Plant.

For an outlay of a comparatively small sum the farmer of today can procure a complete electric lighting and power plant. He will have an engine to pump water, grind feed, fill the silo, run the thresher, raise the hay, grind his tools and blow his forge. This same engine will, at odd times when not engaged in any of the above tasks, run a dynamo from which a set of storage batteries are charged, the latter furnishing electric lights in the barn and house when needed. On the possibility of all this has been brought about by the strides which have been made in the development of the apparatus employed to accomplish it. Take the storage batteries now on the market, the "chloride accumulator" for instance, which makes electric light practicable on the farm without interfering with the use of the engine for other purposes. This silent and unobtrusive item of the plant needs practically no attention whatever—simply receives the electricity from the dynamo, say at the noon hour or at any time it is convenient, and stores it up for use later when needed. At the barn, when the stock is being put up for the night; in the house for the evening's reading and recreation, and again in the dark early morning light can be had instantly wherever wanted at the turn of

NEXT WEEK'S SALE PROGRAM

Monday, March 10	Jacks and Jennets, G. C. Roan, La Plata, Mo.
Tuesday, March 11	Poland Chinas, C. L. Thuirer, Fostoria, Iowa. Poland Chinas, M. F. O'Hern, Barnum, Iowa.
Wednesday, March 12	Poland Chinas, James Lawler, Clare, Iowa. Percherons, L. H. Luckhardt, Tarkio, Mo. Aberdeen Angus, Isenbarger Bros., Battle Creek, Ia. Hampshires, H. D. DeKalb, Council Bluffs, Iowa. Horses, etc., Chas. Irvine, Ankeny, Iowa. Poland Chinas, W. J. Crow, Webb, Iowa.

a switch. In this connection the advertisement of the Electric Storage Battery Company, Philadelphia, Pa., which appears on another page in this issue will be found interesting. When writing them mention this paper.

Three Centuries Old.

Very few firms can boast of having been actively engaged in business in three centuries (1784-1913), so when we received, a few days since, the new spring catalog of the D. Landreth Seed Company, who own the Bloomsdale Seed Farms, at Bristol, Pa., we found our perusal of their handsome book interesting. The accumulated knowledge and experience of a concern such as theirs deserves the recognition of those who wish to get the worth of the money which they devote to the purchase of seeds, plants and bulbs. The advertisement of this company appears elsewhere in this issue and we suggest that our readers look it up.

Choice Duroc Gilts Bred.

Chas. L. Taylor, Olean, Mo., breeds a superior type of Duroc, as has been proven by the winnings at the Missouri State Fair and the American Royal. He is now pricing right a superior lot of gilts by the prize-winning Col. Wonder, a son of Crimson Wonder 3d. These are bred to Crimson Col. I Am by B. & C.'s Col. A better combination of blood lines is not found and as each of these boars are noted for their size and quality the offspring should be exceptionally good. A limited number not by Col. Wonder are bred to him. Note Mr. Taylor's advertisement elsewhere in this issue and when writing him kindly mention The Farmer and Stockman.

Schmale Offers Choice Poland Chinas.

Herman Schmale, DeWitt, Neb., is offering for quick sale a choice lot of real big-type Poland China fall boars and gilts. Readers of this paper who are going to need a boar to breed for fall litters, or that wish a start in choice Poland China hogs, and wish to get started before hogs get as high in price as they are bound to do soon, will do well to order some of these boars and gilts at once. It would be a good plan to order a pair or more of these gilts and one of these young boars and start a good herd. They are of the right age and size to breed for early fall pigs and the express charges will not be great on them if ordered at once. The breeding is of the very best to be had of the real big stuff, and the prices are away below what such stock usually sells for. Mention The Homestead and write for full prices and description at once. Mention The Homestead when you write.

Ehlers Offers Short-horn Bulls.

F. H. Ehlers, Tama, Iowa, is offering Scotch Short-horn bulls for sale in this issue of The Homestead. He has a two-year-old bull named Lancaster Sultan, sired by Missie Sultan and out of a Lancaster cow. This is a good top bull with an excellent spring of rib and will be sold worth the money. One of the best bulls Mr. Ehlers offers is a son of Scotch Sultan, the prize-winning son of Whitehall Sultan. This calf is out of Red Missie, coming from the well-known Mar Missie family. This calf is a thick, low-down fellow and will make someone a valuable herd bull. There is a good September yearling sired by Rob Roy, a Campbell Mina and out of Lady Anne 16th by Imp. Redlight. These bulls are worth the money asked for them. Mr. Ehlers would also sell cows or heifers of the best Scotch breeding at right prices. He also has a few seven and eight-months-old bulls sired by his great herd bull, Roan Knight 2d. See the advertisement on another page and write him, mentioning The Homestead.

Drybread & Sons' Duroc Sale—Last Call.

This will be our last opportunity to call the attention of our readers to the great sale of Duroc Jersey bred sows to be held by Samuel Drybread & Sons at the Star Breeding Farm near Elk City, Kan., Monday, March 10th. The offering of fifty head, consisting of fifteen one and two-year-old sows, fifteen fall yearling gilts, fifteen spring gilts and five young boars, is royally bred and contains many splendid individuals. It is made doubly valuable from the fact that it has been given the simultaneous treatment against disease and is immune from cholera. The blood of such well-known sires as B. & C.'s Col., McNeil's Model, Buddy K. 4th, Ohio Chief and Red Wonder is prominent in the offering. A majority of the sows and gilts are bred to that splendid breeding boar, Model Top 77405, a son of the great Golden Model. This offering of sows, bred the way they are and safe from disease, should certainly appeal to Duroc Jersey lovers, and all those looking for brood stuff of the right type should attend this sale. If unable to attend any bid sent to John C. Halderman, who will represent this paper at the sale, will be carefully looked after.

Cochran & Sons' Short-horn Sale.

C. G. Cochran & Sons, Hays, Kan., are bringing to Salina, Kan., for the sale which will be held on Friday, March 14th, a class of Short-horn cattle that should be appreciated by all who like cattle with scale, quality and bred character. They have always used superior herd bulls noted for thick, heavy-fleshing quality and this has made their herd superior in this respect. The cattle come to the buyer in just good prime breeding condition, so that they cannot fail to do well in the purchasers' hands. Cochran & Sons have always placed individual merit above all else when buying herd headers or females for their herd and have looked to the pedigree after finding the animal that was of the type and conformation they desired. By so doing they have built a superior herd. Some of the very choicest of Scotch and pure Bates breeding is found in the pedigrees and as they have not followed fads and fancies in breeding their herd is free from inferior animals with choice pedigrees. The bulls they are putting in the sale are just of serviceable ages and are strong constitutioned fellows with plenty of bone. The females are a breedy lot selected from a large herd with the thought of offering the public as good as they produce. The sale is held at Salina, Kan., on account of the excellent railroad facilities over several lines. A. F. Cochran, who manages the sale, will gladly send you a catalog and complete information of the offering. Note advertisement elsewhere in this issue and when writing kindly mention The Farmer and Stockman.

Lefebure's Belgians.

Henry Lefebure, the well-known horse importer of Fairfax, Iowa, informs us that he is in receipt of a cablegram from Belgium announcing that his spring shipment of Belgian draft stallions was shipped from Antwerp on the twenty-second. They will be due at Fairfax about March 15th, which will be in ample time for his April and May trade. They consist of three to five year olds, of all the popular colors, and their quality needs not be questioned, for he imports none but choice, strong, heavy-boned and sound horses. His barns are full of stallions at the present time, all of the best quality and in the pink of condition. Several mammoth roans weigh from 2,250 to 2,400 pounds and he has a barn full of coming three year olds that weigh 1,800 to 2,000 pounds at the present and not a matured horse that weighs less than a ton. He also keeps a few choice Percherons, but men wanting Belgians are always delighted at the Belgian horse show to which they are treated when there. Visitors will not find any empty stalls until in May or June; the supply never runs slow. Illustrated catalog will be sent free to all who write, mentioning this paper. See advertisement elsewhere.

Kreischer's Herefords and Polands.

E. W. Kreischer, Mt. Vernon, Iowa, offers Hereford bulls and females for sale. He has six young bulls, three by his great show bull, Albany, and the balance by Dale's Eclipse, a grandson of the $10,000 Dale. There is one calf by Young Albany and out of Spray by Distributor that is a show calf. He was calved in July and is one of those thick, deep, good-quartered fellows that will develop into a high-class herd bull. The others are good calves and will not last long at the price. A few cows and heifers that are granddaughters of Disturber and Defender, and daughters of Advancer, Success, Norway Chief and Wilton would be priced, and everyone is bred to Young Albany, the great show bull Mr. Kreischer recently sold to Bell Bros., Nora Springs, Iowa, for $500. Cows bred to such a noted bull as this should prove exceptional money makers in any herd. Mr. Kreischer has one of the good herds of Poland Chinas in the corn belt, the average of his recent sale indicating what breeders thought of the offering. Fifty head sold for an average of $76 and the top was only $115, which indicates that it was an exceptionally even sale and the offering was uniformly good throughout. If you want a Hereford bull or some females write Mr. Kreischer as per his advertisement, mentioning The Homestead.

American Aberdeen Angus Breeders' Association Spring Bull Sales.

The American Aberdeen Angus Breeders' Association has claimed the following dates for its annual spring bull sales: April 29th at Omaha, May 1st at Chicago and May 2d at East St. Louis. About enough topnotch entries from the best herds in the country have been received for the Omaha sale. A few more good entries are needed for the Chicago and St. Louis sales. Members of the association who are thinking of consigning bulls to any of the sales should advise Secretary Gray at the Union Stock Yards, Chicago, Ill., at once. Last year many good entries were barred from sale because application for space was made too late. The sales last year were very successful and those who consigned the bulls were well pleased with the prices obtained. The auction form of selling bulls under the auspices of the association has become very popular. The strong demand for bulls this season indicates that bulls will bring good prices at the sales. The business of the association so far this year shows an increase of 35 per cent and is steadily increasing. The increase is chiefly from registration fees and new members being enrolled. Breeders from every part of the country report that the bull trade is exceptionally good. Breeders seem more jubilant over the outlook than has been in evidence for ten years. Every breeder who has animals to record should give the same attention at once, so he can take care of his spring trade.

Choice Scotch Collies.

We recently received this interesting letter from A. A. Martin & Son: "No dog equals the Scotch Collie, either as a faithful companion for children or for service about the farm. They are one of the most affectionate of dogs. He is so full of business that he feels the responsibility of the entire farm, keeping a constant vigil day and night. A well-bred Collie will adapt himself to stock of all kinds, even to informing his master of unusual conditions around the premises at any or all times. Certainly blood tells. Our kennels are composed of Collies of the best blood that can be purchased. Their breeding is close to such dogs as Alloway Ambition, that won at Crystal Palace, London; Edinburg; Airdirie; Airdrie, Dunoon; Paisley; Aberdeen, and Shettleson, Scotland, and Belfast, Ireland. Glentana Bounder is a winner of over sixty firsts in Scotland and a full brother to the great champion, Anfield Model. The Collie Club of England recently adopted his head as a vignette to go on all official printing. He is famous for his beauty and a noted sire. Our kennels are very rich in the blood of this dog. Our blood lines also include Champion Irmskirk Emerald, who sold for the highest price ever paid for a dog. Buckler, who stands at the head of our kennels, has eighteen champions in five generations, including Champion Anfield Model twice, Southport Student, Wishaw Clinker, Parbold Piccolo and many others of equal note. Lady Ambition also has Champion Anfield Model, Champion Emerald Eclipse, Wishaw Leader and about twelve or fourteen others. The other bitches are equally well bred." For full particulars and prices on the young stock for sale mention The Homestead and address A. A. Martin & Son, Box 107, R. 4, Lincoln, Neb.

Irvinedale Farm Sale.

On March 12th Chas. Irvine, Ankeny, Iowa, will hold a public sale which shall include pure-bred Belgian horses, draft horses and Short-horn cattle. There will be two yearling Belgian stallions that have been prize winners at the Iowa State Fair and at the Interstate Live Stock Show. They are both big fellows, from big ancestry and with wonderful promise of development. Mr. Irvine has gotten together a very large number of high-grade draft mares for this sale and believes that he is offering a consignment that farmers generally will appreciate. The sale of Short-horn cattle contains a number of excellent individuals, mature cows and young bulls. In addition, a considerable amount of other property will be disposed of, chief among which, perhaps, is a good five-passenger Mitchell automobile. Any additional information concerning this sale may be obtained by writing to Chas. Irvine, Ankeny, Iowa. Mr. Irvine will be glad to meet buyers at Ankeny before the sale and return them after the sale without cost.

Council Bluffs Hampshire Sale.

In again calling the attention of our readers to the public sale of Hampshire hogs which H. D. DeKalb, Dekalb, Ia., will hold at Council Bluffs, Iowa, on Wednesday, March 12th, we feel that we are doing them a service and one which they will certainly appreciate on sale day. Mr. DeKalb has one of the largest herds of this breed of hogs in Iowa, if not, indeed, the very largest. Better than that, however, he has one which carries the highest degree of breed perfection and, at the same time, one which in the individuals conforms to the most approved type of economical and profitable pork-making animals. This type has been gained by a judicious commingling of the most prominent and valuable strains of Hampshire blood. It is doubtful if there is anywhere in the country today a herd which can boast an equal number of great big, smooth, well-formed, mellow brood sows as that which finds its home on Mr. DeKalb's farm. Sixty head have been cataloged for the sale in question. All but ten of them are mature animals. That is, yearlings and two year olds, and fully half of them are tried breeders. They are in perfect thrift and excellent health. There has never been any disease on the DeKalb farm, so that buyers may be assured of protection in the animals they purchase. There are a choice lot of young sows in this sale which should be looked after by those who have an eye on the coming show season. In general make-up, excellence of feet, broad, well-arched back and neatness of finish, the consignment stands preeminently above the average sale offering. These sows will all have been bred for April and May litters. They carry show-yard strains and are in every respect desirable. Catalogs may yet be obtained by writing to H. D. DeKalb, Dekalb, Iowa. It should be remembered, however, that the sale will be held at Kiel's barn at Council Bluffs, Iowa. Any reader of this paper who is unable to attend the sale may forward bids to M. T. White, who will be in attendance and who will be glad to execute any commissions. The advertisement will be found elsewhere in this paper.

The North & Robinson Horse Sale.

In the opinion of the writer one of the greatest lots of draft horses ever offered in Nebraska will be put up for sale by North & Robinson, Grand Island, Neb., on March 20th and 21st. We have seen the greater part of the offering that is to be sold, and we must say that for real big, drafty, sound horses, that they are the equal or the superior of anything that we have seen sell in a long time. More big, smooth, ton mares will be in this sale than any sale we have yet attended, and there are a great many that weigh well over that mark. Twelve of these mares have weighed sixteen tons. Some weight, but the scales say that they do it. One of these mares weighs now, and by sale time will probably exceed 2,400 pounds and several of them weigh 2,300 pounds. These mares are in good condition, but they are not fitted as for a show and would carry quite a little more weight, should one care to put it on them. Among these big mares are the first and second-prize mares at the Nebraska State Fair last season. They are all bred to topnotch stallions and if they are not good property, then we know of nothing in the horse line that will be. The writer has long known the men making this sale, and we know that the horses that they have offered for sale have always sold, and we are also confident that every horse that enters the sale ring at this forthcoming sale will change owners. These gentlemen have the greatest horse-breeding establishment that we know of, and they raise horses to sell. A great part of this offering is home bred and they are the equal of anything that we have seen from the old country. They should be better and we confidently believe that they are. They are raised under better conditions as regards climate, for there is no better climate for horse growing than central and western Nebraska. The feeds are right, the climate is right and they should and have developed a better constitution than horses raised under less favorable circumstances. We would like to see a lot of Homestead readers at this sale. We are making a special appeal to them, for they are all close friends of the writer and we would not advise them wrong for anything in the world, and we just want you to take this piece of advice. Attend this sale; it is of importance to you that you do. These horses are right and they will positively sell at the prices you set. Be on hand; it is certainly to your interest. For further particulars address North & Robinson, Grand Island, Neb., and mention The Homestead when you write.

W. C. Baughman, Pulaski, Iowa, is offering a few imported mares and fillies for sale in his advertisement that appears elsewhere in this issue. The mares are in foal to Imp. Holdebert, a government stallion of France. They are all grays. He also has five coming three-year-old imported and home-bred stallions. He invites those interested to visit his barns and inspect the stock.

Elsewhere in this issue of The Homestead will be found the announcement of William T. Trotter's postponed jack and jennet sale, which is now to take place at Mount Ayr, Iowa, on March 13th. The offering will consist of fifteen jacks, all broke and all big black fellows. There will also be fifteen extra large jennets, all bred, and none of them over eight years old. The sale will start at 12:15 and every animal advertised will be sold. Mr. Trotter requests those interested to come the day before the sale and inspect the stock.

O'Hern's Poland Sale—Last Call.

A sale of Poland China sows bred for April litters and some for later ones that has some good sows in it is that of M. F. O'Hern, Barnum, Iowa, Tuesday, March 11th, the day preceding the sale of James Lawler, Clare, Iowa, a few miles to the north. It is the first sale that has been held by this man. There will be a collection of useful sows and on account of the date of the sale it will be full of good bargains for anyone. The breeding of the sows is given in the advertisement elsewhere in this issue and it will be seen that the foundation stock was chosen from some of the good breeders of the country. Get some of the catalogs and send along some bids for the stuff if it is not possible to attend the sale. Send them to Ray L. Gribben, Homestead representative, who will attend the sale. Address for catalog M. F. O'Hern, Barnum, Ia.

Lawler's Last Call.

James Lawler, Clare, Iowa, holds his postponed sale of bred Poland China sows at his farm near Clare on Wednesday, March 12th. These sows are by boars that carry the good lines of the big-type strain and one of them, Miller's Choice, is right at the top of the big ones in the size he shows. The other, Chief Price A., is as well bred along the same lines, and though not quite as large, is still big and has some good gilts in this herd to show for his powers as a sire. The most of the sows are bred for April farrow and can be handled by the farmer to good advantage. They are in good, thrifty condition and can be depended upon to do well for the men who may buy them. Write for the catalogs and then get ready for the sale. The farm can be reached either from Barnum, on the Iowa Central, or Clare, on the M. & St. L. Address James Lawler, Clare, Iowa. Ray L. Gribben will attend the sale for The Homestead.

Thuirer's Poland China Sale.

Remember the sale of Poland China bred sows to be held by C. L. Thuirer at his farm near Fostoria, Iowa, Tuesday, March 11th. There are some choice attractions here that would have done well in any of the earlier sales. Many of them are sired by one of the best known of the herd headers of this section, Colosso. He was a prize-winning pig at the Minnesota State Fair the fall he was shown and sired a lot of pigs with more smoothness than is usual in this type. His offspring are mated with Thuirer's Big Orange, a son of the smooth Crow's Kind, which will put good bone on a quick growing. This has been proved by the work he has already done in the herd, and there will be sows in the herd that are being kept which will more than bear this statement out. Two more are unusually good sows, spring gilts, are listed for this sale, one by Smooth Giant and the other by Big Black Jumbo, and these are worth looking up by any good breeder. They are the best sort of bargains. The sale includes five matured sows, seven fall gilts and twenty-eight spring gilts, all good ones. Write for the catalogs now and take off to come to the sale and get some of this good stock. Write, mentioning The Homestead, C. L. Thuirer, Fostoria, Iowa. Ray L. Gribben will attend the sale for this paper.

Crow's March Sale.

W. J. Crow, Webb, Iowa, holds on March 12th a second sale of bred Poland China sows, and among the bunch that will go through the ring are some of the good sows of the year. At his first sale, held in a blizzard in February, he sold an offering that was one of the best in the northern part of the state, and this lot is the same sort, except that they are bred a little later and will farrow at a time when anyone can afford to buy, as the farrowing time comes when the sows can be handled with very little trouble. They are sired by the good boar, Crow's Kind, giving them smoothness and good bone, and are the sort that mature early, grow big, and those who have bought from this breeder have always gotten sows that have done well under the new conditions they have been removed to. Some are by Big Surprise, another smooth, big boar of the more practical type. The young service boars are as fine prospects for the top sort of herd boars as one sees in any herd. The youngest of the lot, Brilliant, a June pig, looks more like a real boar for his age than any boar that we have seen this season. Here is one of the best chances to go to a sale and get sows that have lots of size and smoothness, that have large litters and are profit makers at fair prices that will come this season. Write to W. J. Crow and get his catalog of

the sale and plan to be present. Address Mr. Crow at Webb, Iowa, mentioning The Homestead.

H. Redenius, Rushmore, Minn., is advertising home-bred and imported Percheron stallions and mares from $200 to $900 each. See advertisement on another page.

A. J. Podendorf, Logan, Iowa, announces a sale of Holstein cattle to take place March 26th. On that date he will sell fifty pure-bred and high-grade Holsteins. Further particulars will appear in next week's Homestead.

The farmer looking for good seed will undoubtedly be interested in the catalog published by Fred Echtenkamp, Arlington, Neb. Mr. Echtenkamp assures our readers that his corn is positively home grown from pure seed and is not purchased from different farmers as they haul to market, as some seed houses do and then claim to have good seed. His advertisement will be found elsewhere in the horticultural department in this week's issue.

Catalog No. 19 for the Flour City tractors, made by the Kinnard-Haines Company, Minneapolis, Minn., is a very beautiful booklet. In addition to being beautiful it is one of the best illustrated and one of the most comprehensible booklets that has been sent to our office. We feel sure it will pay all our readers who are interested in tractors to get a copy of this catalog. The Flour City tractor is advertised elsewhere in this issue.

We desire to call the attention of our readers to the excellent line of Eureka potato and corn-planting machinery advertised elsewhere in this issue. This is a very fine line of goods, manufactured by the Eureka Mower Company, Utica, N. Y., and bears an excellent reputation. It is extensively sold all over the United States. Farmers who are planning to buy something in this line will do well to write them for catalog.

W. J. Wendt, Marcus, Iowa, offers elsewhere in this paper some of the best bred sows of the Duroc Jersey breed and is offering them at very fair prices. This season anyone can make good on this class of sows and no time was ever a better one to get started in the breeding of better stock. Mr. Wendt can make you some good propositions and it will be to your benefit to write him for descriptions and prices. Mention The Homestead when you write. Address W. J. Wendt, Marcus, Iowa.

We wish to call the attention of Homestead readers to the advertisement elsewhere in this issue of L. C. Gourley, Villisca, Iowa, who announces a closing-out sale of thirty-seven head of Guernsey cattle, six head of registered bulls; fifteen head of good horses, twelve head of Short-horn cattle, and twenty-six head of spring gilts, twenty of which are full-blood Duroc Jerseys and six are full-blood Poland Chinas. The sale will take place at his farm three miles northeast of Villisca, starting at twelve o'clock on Tuesday, March 11th.

A new sweet corn, with the combined merits of Golden Bantam and Stowell's Evergreen, is being introduced this season by Vaughan's Seed Store, Chicago and New York. Because of its parentage this 1912 novelty is named Bantam Evergreen. The ears are a golden yellow of good size and possess the quality of the Golden Bantam. The earliness of Bantam Evergreen makes it one of the most valuable sweet corns ever introduced. This company's advertisement appears in this week's issue in the horticultural department.

Two very valuable booklets for live stockmen have been put out by the Chicago Flexible Shaft Company, LaSalle Ave. and Ontario St., Chicago, Ill., manufacturers of clipping and shearing machinery. One of these bears the title of "Why Horses Should be Clipped," stating the condensed opinion of sixteen veterinary surgeons. The other concerns practical methods for extensive sheep shearing. These books are both well illustrated and are not confined wholly to the merits of the excellent line of goods manufactured by the above company. We think it will well repay our readers who are contemplating buying machinery of this type to write the Chicago Flexible Shaft Company, whose advertisement appears elsewhere in this issue.

C. H. Porter, Eagle Grove, Iowa, has had a good trade this season in bred Poland China sows, and though he had a large number for sale and has sold quite a lot of them, he can still offer some first-class ones to men who can use some more of the breed. They are mostly by Porter's Hadley Expansion by Dorr's Expansion, one of the good sons of that sire. They are bred to other good sires, many of the breeding that has made the herd of W. J. Crow so well known and so much sought by those who are breeding the best. You will like the sows that are for sale by this firm and it will pay you to write to C. H. Porter, Eagle Grove, Iowa, about the sows that are still for sale. See the advertisement elsewhere in this issue.

Davenport & Mack, Belmond, Iowa, have Short-horn cattle and Poland China sows for sale at all times, and just at the present they can furnish sows good Poland China bred sows to those who may still be able to use some good ones. The sows carry good breeding and are reared under thoroughly practical conditions, making them a good sort to buy for anyone who expects them to go ahead on the average farm. It is this class of men to whom the stock here are adapted, for they are as good as any and are not pampered, so that it will not be impossible for the good farmer to care for them, as they are used to being cared for. Write now and get the description of the stuff. Address Davenport & Mack, Belmond, Iowa. See the advertisement elsewhere in this issue of The Homestead.

A young draft stallion is described and priced in the advertisement of Amos Hanson, Collins, Iowa, that appears elsewhere in this issue. From the description this stallion is a promising young horse and interested parties should write Mr. Hanson for further particulars.

The illustration presented herewith is that of Frank J. Rist, Humboldt, Neb., one of the most progressive and enthusiastic seedsmen of Nebraska. Mr. Rist is a man who has been trained in the seed business from boyhood. He has been taught from childhood the value of good seed and has had this early education supplemented with a full course at the Nebraska University of Agriculture. Mr. Rist has made a success. His efforts have been appreciated and the seeds sent out from his farm have done much good. His last year's buyers are ordering again this season. They realize that good seeds are the best investment they can make and the best seeds are what they are after, therefore they buy of Mr. Rist. Those of our readers who are in search of the very best will

make no mistake by ordering their seeds of this gentleman. He is a young man of the very best reputation and this good name he values very highly. He will maintain this good name at any cost, hence no one need hesitate ordering from him. One of the most attractive exhibits at the recent corn show at Lincoln was put up by Mr. Rist. His efforts aided the show materially. This sort of effort is deserving of support and the writer would like to see the same rally to this call. Seed oats and seed corn of the very best strains of leading varieties are offered. Address as above and mention The Homestead when you write.

A Great Angus Bull for Sale.

One of the leading attractions in the Aberdeen Angus sale of Isenbarger Bros., at Battle Creek, Iowa, on March 12th, will be their sensational herd bull, Black King of Homesdale 98817. This splendid bull is now six years old, but he is just in his prime. He is one of the greatest sons of that equally noted bull, Black King of Woodlawn, that helped make the Igo herd famous. The dam of this bull is Blackwood 14th, a daughter of that noted show and breeding bull, Black Monarch of Emerson, and he is one of the most richly bred Blackbird bulls that has been used in the West in recent years. As an individual this bull has few superiors today in the West and he has been a great breeding bull. He is strictly a herd bull proposition and is good enough to head any Angus herd in this country. Isenbarger Bros. have used this bull at the head of their herd for several years and they now have so many of his heifers in the herd and want to retain them that it becomes necessary to sell the old bull. Here is a bull that the best Angus breeder in America can use and we care not how noted his herd may be. It is seldom a bull of the individuality and breeding of Black King of Homedale is offered in a public sale. The breeder who attends this sale and is looking for a high-class sire is not going to be disappointed in this bull. He is all we say about him and we wil stand behind all we have said regarding him. They have listed a splendid lot of younger bulls in this sale, many of which are Blackbirds, and among these are several that will make good herd bulls. They are also cataloging a splendid lot of females, among which are some of their very best Blackbirds, K. Prides and other well-known families. Write Isenbarger Bros., Battle Creek, Iowa, for catalog and kindly mention The Homestead.

Public Sale of Short-horn Bulls.

On Saturday, March 8th, at Malvern, Iowa, Geo. H. White and I. J. Swain will make a public sale of fifteen head of splendid young Short-horn bulls. These are both Scotch and Scotch topped and several of these will make splendid herd bulls. The sale will be held in the morning about ten o'clock, so if any of our readers are on the market for a bull it will pay them to attend this sale.

Percheron and Shire Sale.

On March 8th, at Malvern, Iowa, will occur the public sale of twenty head of registered Percheron and Shire stallions and mares, one registered Spanish jack and forty head of high-grade draft mares, geldings and fillies. These stallions and mares are contributed mostly by the smaller breeders of Mills county and they are offering some of the best horses that will be sold in any public sale this spring. If any of our readers want a good stallion or a good span of registered mares it will pay them to attend this sale on March 8th.

Clark's Hereford Sale.

On March 21st, at his home farm near Brayton, Iowa, R. P. Clark will make his annual public sale of fifty head of Herefords, including twenty bulls and thirty cows and heifers. Included in this sale will be his well-bred herd bull, Gay Donald 12th, a son of that well-known bull, Beau of Shadeland 31st. This bull is a grandson on the sire side of W. N. Rogers' noted show and breeding bull, Beau Donald 28th, and his dam is out of the 2,800-pound bull, Monarch of Shadeland 3d. He is an exceptionally well-bred bull and has done splendid service in the Clark herd. He is a four year old and he was bought when a calf, and as Mr. Clark is retaining his heifers he has decided to sell him. He has listed a splendid lot of young bulls for this sale, among which Acrobat 5th, a son of Acrobat's Star and out of Lucy Vanguard, is one of the best cows in his herd. Another is Czar, an August yearling by Caesar, Mr. Thornton's great herd bull. This bull has for his dam that splendid cow, Luminary, regarded as one of the most useful cows that he has ever had in the herd. Prince 12th is another August yearling sired by King Francis and out of Lucky Lady, another one of his good brood sows. Stylish Lad, Peter Sconce and Governor G. are all sired by Beau Donald 124th and these will all make good and useful bulls. Mr. Clark is selling some splendid females in this sale, among which is Nell Gwin, a daughter of old Gold Bug, one of the bulls that did service in the herd of Minier Bros. at Craig, Neb. She will have a calf by sale time to the service of Gay Donald 12th and she is one of the best cows that he will offer in the sale. Another good thing is Martie, a daughter of Clover Leaf Dale, out of a dam by March On 6th, and she will also have a calf about sale time. Gay Wilton 9th is a five year old and she is a daughter of Gay Wilson 5th and is one of the splendid breeding cows that he has in the herd. She is safe in calf to Gay Donald 12th. Lady Vanguard is another one of his best cows, as is also Birdie, a daughter of Beau Gallant by old Beau Brummel. Mr. Clark is also selling some very useful and well-bred heifers in this sale. If you are interested in Hereford cattle make it a point to send and get the R. P. Clark catalog at once, which will be forwarded upon application. When writing for it kindly mention The Homestead. Remember the Clark sale will be held the day following the A. F. Hager sale and intending purchasers can attend these two sales with ease and comfort.

A. F. Hager's Hereford Sale.

On March 20th, at the new sale pavilion at Avoca, Iowa, A. F. Hager will make a public sale of fifty-four head of Hereford cattle and it will be one of the best offerings of the spring season. It has long since been known that Mr. Hager has had one of the best herds in western Iowa and the cattle that he will sell in this sale are going to meet with favor on the part of those who will attend his sale. He is selling twenty-six head of splendid bulls and a great number of these will make herd headers. There will be twenty-eight head of cows and heifers and no man is selling a better bunch. First and foremost is his great herd bull, St. Elmo R., that is listed as No. 1 of catalog. This is one of the very best herd bulls today in the West and one of the best that we know of that will be sold in any of the sales this spring. He is a son of St. Elmo 27th, a bull that was formerly used in the Hood & Baker herd at Dunlap, Ia. His dam is Rena 2d, a granddaughter of old Sylvester, and he in turn was a son of Anxiety 4th. He is a well-bred bull through both sire and dam side and is a most excellent individual and a splendid breeding bull. He will weigh about 2,400 or 2,500 pounds and is one of the most active and best servers you ever saw. It is not often that a bull of this kind is offered in a public sale, but Mr. Hager has owned him since a calf and has so many of his heifers in the herd that he is compelled to part with him. We have known this bull since he was dropped and we know whereof we speak when we say he is one of the outstanding herd bull propositions that will be sold in any of the sales this spring. Another splendid bull that he is offering is Beau Charm 2d, a grandson of Beau Donald 28th and March On 16th. This bull, while not as large as some, is nevertheless a good one and he is full of quality from end to end. Clearmont Lad, a six-year-old bull, is also listed and he is another one of the good breeding bulls that will be cataloged for this sale. He is a grandson of old Dale 3d on the sire side and descends from that old World's Fair bull, Ancient Briton, on his dam's side. He will weigh right around 2,300 pounds and has been a most excellent breeding bull. Clearmont's Pride is another good young bull and he is a son of Dale Lad 8th. This youngster was seventh-prize bull at the Iowa State Fair and he has every promise of making a good herd bull. Monarch Wilton is the making of a splendid herd bull. He is an August yearling and is a grandson of Monarch of Shadeland and St. Louis Wilton and will make a large and a very good bull. There are a lot of other good bulls in the Hager sale and they are in splendid shape and the farmer, the breeder or the ranchman will find here just about what they are looking for. The females he has listed for this occasion are in keeping with the rest of the offering and he is selling some outstanding good cows and heifers and nobody can show a better bred lot. We will speak of the female offering in next week's issue. In the meantime kindly write A. F. Hager, Avoca, Iowa, for copy of his catalog and mention The Homestead when doing so.

Anstey's South Omaha Hereford Sale.

On March 18th, at South Omaha, Neb., George J. Anstey, Massena, Iowa, will make his annual public sale of seventy-eight head of Hereford cattle and it promises to be one of the most attractive sales of the year. For twenty-five years Mr. Anstey has been one of the mainstays of the Hereford breed and in his time has bred some splendid cattle. Many of the earlier herds were started from drafts from the George Anstey herd and he in his time has bred some of the best. This Omaha sale is going to be particularly attractive because of the number of young bulls that he has listed for the occasion. There will be fifty-three young bulls in the sale, all bred on the farm, and these are the pick of last season's crop. There will be forty yearling bulls in the sale ranging in age from fourteen months to two years of age. There will be eight bulls that are just about a year old and four or five two-year-old bulls, and it will certainly be one of the most attractive bull sales of the season. About half of the bulls that he will offer in this sale will be sired by his splendid old bull, Sidney 1st, a grandson of Imp. Keep On. This old bull is now sixteen years old, but is still doing service in the herd, and he has been one of the greatest breeding bulls Mr. Anstey has ever used. We have known old Sidney 1st for these many years and we have seen his get in many a sale ring and they have always been good. In fact, he has been one of the monarchs of the Hereford breed, and while he is getting along in years, yet he is today one of the most vigorous old bulls you ever saw. The remainder of the bulls are sired by Bruce Beau Donald, a son of Beau Donald 37th, and Columbus K., the latter bull being a grandson of old Columbus. The fifty-three head of bulls that Mr. Anstey is selling in this sale are a rugged lot and are out of the best cows on the farm. Among these are dams that are descendants of old Corrector, Keep On and Anxiety 4th. The Anstey herd now numbers over 300 head and is one of the largest herds in the state and the West. In no sale held this spring will there be found as many bulls as Mr. Anstey is offering at this time and he is making the sale at Omaha because of its accessibility to the breeder, the farmer and the ranchman. He has selected twenty-five females to make up the balance and these are a well-bred and useful lot from one end to the other. These will range from two to six years of age, but most of them are twos coming three. Everything old enough will be safe in calf and some will have calves at foot by Bruce Beau Donald, Columbus K. and Beau Gaston, the latter bull being a full brother to the great Beau Mischief. The heifers will be daughters of Sidney 1st, Beau Shadeland 10th, a Beau Donald bull bred by W. N. Rogers, and there are some outstanding good heifers in the sale. The man who wants to buy a few good females to replenish his herd or to start a herd will find about what he wants in the Anstey offering. We will say this for Mr. Anstey, and we have known him for these many years, that there is no more reliable breeder of Herefords in the business. He is selling a good lot of cattle in this sale, in nice breeding condition, and he extends a special invitation to every breeder, farmer and ranchman who wants to buy a few Herefords to be at South Omaha on March 18th. His catalog is now ready for distribution and will be mailed upon application. When writing for it kindly mention The Homestead.

Stallions and Bulls

THE Iowa State College is offering for sale one Clydesdale stallion coming two years old sired by Kuroki (12629) 13214, dam Maggie Refiner 13341 by Refiner (12301) 12116; 2d dam Princess Maggie 10880 bred by Colonel Holloway. Also several good, young Short-horn and Angus bulls. Address Division of Agriculture, Iowa State College, Ames, Iowa.

Choice Boars and Gilts

GEO. J. ANSTEY'S SALE

HEREFORD CATTLE

78 Head. 53 Bulls, 25 Females. 78

SOUTH OMAHA, NEB., TUESDAY, MARCH 18, 1913

I AM selling **53 head of splendid young bulls** in this sale. The choice of my last year's raising, and as good a bunch as has ever left my **Fairview Herd.** There will be **40 yearling bulls coming two years old, 8 bulls about a year old and 4 two-year-old bulls.** These are sired by my noted old bull, **Sidney 1st 161307,** a grandson of Imp. Keep On; **Bruce Beau Donald,** a son of Beau Donald 37th; and **Columbus K.,** a grandson of the famous old Columbus. These bulls are all out of Corrector, Keep On and Anxiety 4th bred dams. There will be **25 cows and heifers in sale,** ranging in age from two to six years. These are all bred or will have calves at foot to **Columbus K., Bruce Beau Donald or Beau Gaston,** a full brother to Beau Mischief. The heifers are mostly sired by **Sidney 1st** and Beau Shadeland 10th. No such offering of bulls will be made this year and it will be a great opportunity for breeders, farmers or ranchmen. Write for my catalog at once, mentioning The Homestead. Address

Cols. Fred Reppert and M. H. Kruse, Auctioneers. **GEO. J. ANSTEY - - - MASSENA, IOWA**

OUR FIFTH ANNUAL

30-Day Sale Starts March 1st

THE offering consists of a choice selection of imported and American-bred Percheron and Shire stallions and mares. We were never better equipped to furnish the most discriminating buyers with first-class stallions than we are at present. Our horses were imported last October. Are perfectly acclimated, are two and three years old, all dark colors, weighing from 1,800 to 2,200 pounds. The mares are of the large brood type of serviceable age and are in foal. We give our customers fresh, clean, sound horses each year. They are not stale from overfitting. They are the right type with plenty of size and bone. We sell our horses at prices any farmer can pay. We have a large assortment to select from. Every animal guaranteed sound and a satisfactory breeder. If you want the best at prices that defy competition do not fail to visit us before buying elsewhere. We have a few good aged horses that have been replaced with two year olds, sound and good breeders, that will be sold very cheap. Terms to suit any one. Come and see us or write today for full particulars. Homewood is conveniently located 23 miles south of Chicago on Big Four and I. C. R. R., with trains to and from the city every hour. Barns near station. Bell phone, Homewood 58 W. Address

S. METZ & SONS, Homewood Stock Farm, Homewood, Illinois.

MARCH POLAND CHINA SOW SALE

M. F. O'Hern TUESDAY, MAR. 11 Barnum, Ia.

40 Head including 15 Tried Sows, 4 Fall Gilts, and 21 Spring Gilts.

BRED for April farrow, some for later, making the proper time for farmers who are wanting more sows for the next year. This is a sale which it will pay the farmer to attend for the sows are good ones and you can get them at the prices you want to pay for them. The sows are Chief's Wonder 2d., a boar that carries some of the best of the old Harvey Johnson blood, and a good individual of the most useful type. Some of the old sows, Osborne's Queen, Osborne's Queen 2d., Tecumseh Lady 3d. and Ideal Queen, especially, are good enough for any sale, and the most of the gilts are descendants from these sows and their kin. The sows that will be sold are the medium type, and come from stock that have always brought big litters. The sale will be held at the farm two miles southwest of town. Get a catalog mentioning The Homestead when you write. Col. F. F. Luther, auctioneer, Ray L. Gribben, and C. C. Carlin, field men.

THE NORTH & ROBINSON COMPANY ANNUAL SALE

BIG, RUGGED AND CAREFULLY SELECTED

PERCHERON, BELGIAN and SHIRE STALLIONS and MARES

Will be held in Bradstreet & Clemen's sale barn at **GRAND ISLAND, NEBRASKA, THURSDAY AND FRIDAY, MARCH 20-21**

TWENTY-FIVE big-boned, rugged young stallions, including the prize-winning Adolbert, by the champion Olbert and said by many to be the making of as good a horse as his sire. A fine lot of young stallions that are right and fit to head the best kinds of studs. They are nearly all Nebraska grown, and on one of the greatest breeding establishments in the entire country. They are grown where climatic conditions are of the very best, and on the best feeds ever grown for the production of the highest type horses. See these ton and over colts. They are the kind that please. We have listed horses for this sale that will please any man in search of the very best. See them.

THE forty mares offered will include a number that were prize-winners at the Nebraska State Fair last season, and the dozen biggest mares ever sold in one auction will be here. The 12 weigh 16 tons. Parties looking for big, sound mares that are mated and safe in foal to as good stallions as there are in the country today will do well to see this offering. We do not believe that as good values will be had in mares anywhere this season, and the man East or West, North or South can well afford to attend this sale. Everything that goes in the sale ring will sell. We raise these horses to sell, and you will not be dealing fair with yourself if you do not see them.

The catalogs are ready, and we want every horseman to have one. Col. Z. S. Branson, Auctioneer. Mention The Homestead and address at once.

THE NORTH & ROBINSON COMPANY, **GRAND ISLAND, NEBRASKA**

100 SHORT-HORNS AT PUBLIC SALE 100

GALESBURG, ILLINOIS, MARCH 25 AND 26

HORSES AND JACKS.

Frank Iams' Draft Stallions and Mares

are **"up to the minute."** They are the **"drafty, big-boned type"**—**"nifty, big black boys"**—the **real "medal winners"**—sensational **"show and business horses"** of note, **"ripe peaches."** Big, classy **"peaches and cream" "black boys."** The **"Iams brand"** of **"top notchers."** Iams' **importation** of **Percheron** and **Belgian stallions** and **mares** are in the **"pink of condition"** and ready for a **"good selling." "Ikey boy,"** smile **sweetly,** and hundreds of Iams' satisfied customers **"will sit up and take notice"** that **Iams,** the **"king pin"** horse importer, is still **"doing business"** at the **"old stand." Iams** is **"pushing"** his horses to the front. The big **"peaches and cream"** "boys and girls" are **attractions** that can't be overlooked. Iams **mesmerizes** buyers with **"real drafters"** at **"bargain prices"** and having the **"horses as advertised."** Iams' **"competitors"** and **"hammer knockers"** are **"boosting** Iams" by their "knocks," until **now** he is **known** as the **"millionaire horseman,"** and on **"Easy Street,"** and growing fast. **Ikey, "buzz around" and sing Iams' song.** He is selling these **"aristocratic," fancy "black boys" cheaper** than ever—or **better** horses **for less money—$1,000 and $1,400** (few little higher). Iams has

"Ikey Buys" Iams "Wise Guy" Buy "Show Horses" of Iams who has crowned the Queen 50 times for horse and sold 5,414 Registered Horses, "Iams 31 years of success" make him a safe man to buy from at Special Low Democratic Prices. Everybody Does It.

80 PERCHERON AND BELGIAN STALLIONS AND MARES 80

They are **"model drafters."** They are 2 to 5 years old, weigh 1,700 to 2,500 pounds, 80 per cent blacks, 50 per cent ton horses. All **"registered," approved** and **inspected** by **governments** of **France** and U. S. and **certificates "stamped O. K." Iams** gives a **"certificate** of **soundness and health"** with each horse—signed by a **"Nebraska State Deputy U. S."** Many **Paris "prize winners"** and **"gold medal horses."** Big, **drafty "top-notchers,"** with big bone, quality, style, finish and **action to burn.** They are **"eye openers"**—larger and better horses than seen **elsewhere.** Big **"business propositions"** that make **"the wheels work fast"** under a **"buyer's hat." "Georgie, dear,"** Iams made a **"big killing"** by buying his horses in Europe. **"War scare,"** "bad crops," **"close money"** and **"Iams' cash"** caused the **"prize winners"** and **"tops"** to be thrown on the **market** for a **"good selling."—Iams "cut the melon"** and bought the **"rippers"** at **"knockout prices." Iams** will give his customers the benefit of his **"good buy." "Ikey boy," come on down town"**—see Iams—"Everybody is Doing It."

Get into Iams' "get rich wagon" and save $1,000 on a "top stallion"

(and you wear the diamonds). Iams is a **"big fly in the jelly"** in the horse world. "He keeps the gang guessing." **Iams** sells "imported horses only"—(they win 90 per cent of prizes at big horse shows). **No American-bred full bloods"**—no **"auction stuff"** or **"peddlers' horses"**—only **"choice drafters"** of **big size, bone, quality** and **finish. Iams** has the **"crack stallions** and **mares"** you **"read about."** Buy horses of **Iams** and you won't **"get stung" in horse** or **price. "Dolly D.,"** waltz me around **once** again, **"Ikey,"** land me at **Iams' box office** and **importing barns.** Full to "the roof" with **"black boys"** (and all must be sold). **Reduced prices.** All the world knows Iams and his **"peaches and cream" horses.** 1913 **promises** to be a **bumper** year to **Iams** and **his customers.** He saved **$300,000 to stallion buyers** in 1912. **Watch "Iams' smoke."** Iams' 31 years of **successful business** make him a **safe man** to do business with. **Iams sells horses "on honor."** A boy or a lady can buy as cheap as a man. **Iams' 1913 horse**

Catalog is an "eye opener." It has a "laugh" and a $1,000

bargain in every line. A **"bunch of gold"** to stallion and mare buyers. It is full of the real **"peaches and cream"** stallions. It is the **finest, most elaborate and original up-to-date horse book** in the world. Iams, the **"square deal" horseman,** makes every statement in **ad** or **catalog good**—or you get the $500 he **hangs up. Iams** guarantees to sell you a **better**

Imported Stallion at $1,000 and $1,400

(few higher) than are sold to **stock companies** for $4,000. Imported mares, $700 and $1,000. Iams gives **60 per cent** breeding guarantee; pays **freight** on horse and **fare** of one buyer. He can furnish $1,500 insurance. **Iams buys** and **sells every stallion himself. Saves buyers $1,000 in middlemen's profits.** He buys stallions by **"train load."** He speaks languages—(saving 20 per cent). He is **not** in the **"stallion trust."** No **partners** to share profits. He **"pays cash"** for his horses—and sells **"topnotchers"** by **"hot advertising"** and having **"the goods." "Big Ikey,"** leave your "happy" home and buy a **"top"** stallion or pair of **imported mares** (of **Iams**) that bring colts that sell at **$500 each. "Papa,"** don't let those **"auction men" "hand you a lemon"** in one of those **"so-called" "American full bloods"** of **questionable breeding.** Buy an **imported horse** of **Iams,** the **"reliable horseman."** (Then we will **"all wear diamonds."**) Iams' **"selling clothes" fit all buyers. Write for Iams' million-dollar horse catalog.** Iams won't let you go without a **peaches and cream** stallion or mare. **"He sells the horses."** Iams' guarantees are backed by **"half million dollars."** References—1st Nat'l and Omaha Nat'l Banks, Omaha; Packers Nat'l Bank, So. Omaha; Citizens State, 1st State and St. Paul State Banks, **St. Paul, Neb.** Iams buys big-ad space because it is cheaper than flannel-mouthed horse salesmen.

W. A. LANG & CO.,

Greeley, Delaware County, Iowa.

Importers of BELGIAN and PERCHERON STALLIONS and MARES.

We wish to announce to the buying public that we will now, as in the past, give you more good, sound, young horses for the money than you can get elsewhere. We do not advertise cheap stock because we do not think the best breeders want that kind, but we will sell you the good ones at as reasonable margin of profit as possible, and do a remunerative business. All horses are backed up by our GILT EDGE GUARANTEE. Write for full particulars.

SUNNY PLAIN FARM

I WILL sell a few imported mares and fillies, mares in foal to Imported Holdebert, a government stallion of France, all grays. I take plenty of time in buying; no common stuff. Also five coming three imported and home-bred stallions. All the stallions to one firm, if desired, or separately. Any way to suit the buyer. Come and take a look and get the price. W. C. Baughman, Pulaski, Iowa.

Located midway between Rock Island and Peoria, Ill., on C. R. I. & P. Ry.

LARGEST IMPORTERS OF CLYDESDALES IN THE UNITED STATES.

PERCHERON, BELGIAN AND SHIRE STALLIONS AND MARES

GENTLEMAN, the time is at hand when you can no longer stand these scrub, blemished, mean dispositioned horses with bad conformation and loaded with fat. We have sold stallions to customers that like to get rid of that kind. They paid, big, long prices and you can now buy them for most anything you offer. Let us show you the right kind, from 1,800 to 2,200 pounds at the right price. Reliable guarantee and state inspected. We also have a few imported mares in foal weighing from 1,900 to 2,200 pounds. Will pay $600 C. O. D. to match them up. We were born and raised in France and appreciate good horses. Reference, 1st National Bank, Seward, Nebraska. Address

JOSEPH ROUSSELLE & SON, SEWARD, NEBRASKA

Twenty-five miles west of Lincoln.

ROOFING

Corrugated Steel Roofing
1¼c Per Square Foot

Here is the chance of a lifetime to buy the best roofing in the world, at a mere fraction of it's real value. Our enormous buying power enabled us to pick up for spot cash a stock of this brand new, perfect corrugated, "V" crimped and Standing Seam Roofing and Brick Siding, at a tremendous sacrifice — 'way under what it is actually worth. Immediate cash needed made possible this purchase. Just another chapter added to the long list of our famous bargain sales.

Corrugated Steel Roofing
Practically Indestructible

There is nothing else that compares with corrugated steel roofing for real protection. It makes a long, lasting roof. Is fire, rain, frost, wind, sun and lightning proof—warmer in winter—cooler in summer; and under ordinary circumstances does not leak, rot or warp, neither does it taint rain water. You can depend upon it that Corrugated Steel is the best material for roofing, siding and ceiling.

At 1¼c per square foot, we furnish our grade **AB-700** Steel Roofing, in sheets 22 x 24 inches x 1¼ inches. This price is delivered on board cars at Chicago.

Galvanized Steel Roofing
2¾c Per Square Foot

Another big Steel Roofing Bargain. Several thousand squares of the very highest grade specially coated, corrugated, galvanized roofing and siding, made of specially prepared steel, of superior quality. Best roofing, and will last indefinitely. We will furnish it in suitable lengths for any purpose. Only a limited quantity on hand, so we urge you to send us your order immediately. Don't wait to write us again—order today, while this stock exists. Price only 2¾c per square foot, and will outlast 4 to 1. Just drop us a line, and tell us the size of your studding and general facts, and we will help you to select proper sheets. If you are not ready to use the material now, we will reserve it for future delivery, if you will give us a small deposit on account. This price of 2¾c per square foot is for our Lot **AB-800** corrugated material, and is delivered on board cars at Chicago. If you prefer some other style, we will furnish it. We have this same grade in "V" crimped, Standing Seam and Brick Siding. Samples on application.

Ready Roofing With Supplies
62c Per 108 Square Feet

We have several thousand squares of a superior quality Ready Roofing, which we are offering in our AJAX BRAND, 1-ply, at a price of 62c per square of 108 square feet, including necessary cement and caps to lay it. This is undoubtedly the most remarkable bargain ever offered in Ready Roofing. This famous brand is put up 3 or 4 pieces to a roll.

The price of 62c per square of 108 square feet is loaded on board cars at Chicago. We will, however, make a freight prepaid price on this same grade of roofing, including nails and necessary cement of 75c per roll of 108 square feet, and at this remarkably low price

We Pay the Freight

in full to any point east of Kansas and Nebraska and North of the Ohio River.

We will also furnish 2-ply, at 90c; 3-ply, at $1.05.

This **Ajax Roofing** is guaranteed to wear as long, and give as good service as any Rubber Surface roofing on the market.

We have other grades of roofing which we offer 30 per cent lower than others quote. Samples free. Get our free Roofing Book before buying roofing of any kind. This is a chance to lay in your roofing. You must send in your reservations at once—use the coupon shown in this advertisement, or merely write us a letter and tell us where you saw this advertisement. While the stock we have on hand would be considered large for any other concern, remember we have hundreds of thousands of customers who are waiting and watching for these bargains, and who will quickly take advantage of our offer; therefore, we urge you to get in your order at once, even though you are not ready to have the material come forward today. Send us your order and tell us when you want it shipped, and we will ship it according to your requirements. Do not overlook this chance—take full advantage of this offer while it lasts.

Send for Special Roofing
Catalog and Samples

Write at once for our Special Roofing Catalog. Free samples and full instructions for laying roofing. No need to write a letter, simply use the free inquiry coupon shown in this advertisement. We will understand that you simply want full information, samples, prices and specifications, which will be sent you at once, prepaid. Just send your name and address. If you are in a big hurry, send in your order direct from this advertisement. We will fill it for you correctly, and will ship forward without any delay. In any event, write us today.

SMASHING BARGAINS

EXPLANATION

The Chicago House Wrecking Company known to the commercial world as the "Great Price Wreckers" is easily acknowledged **the bargain house of the earth.**

Our Mammoth plant covers 40 acres, and our list of customers are numbered by the hundreds of thousands, and include people from every walk in life. We sell practically everything under the sun at unbeatable prices. We buy our goods at Forced Sales, taking advantage of Sheriffs, Manufacturers' and Auction Sales. In this way we can sell brand new, clean high-grade goods at prices, in many instances even less than the cost of manufacture.

We Supply Everything Needed

Our stock includes everything for the farm, home and personal use, Building Material—Lumber, Roofing, Doors, Millwork, Fencing, Hardware, Plumbing, Heating Apparatus, Furniture, Household Goods, Clothing, Shoes, in fact, every single article needed to clothe a man, woman or child, Sporting Goods, Harness and Vehicles, Jewelry, Sewing Machines, Groceries, etc. You cannot think of a single manufactured article but what we can supply it to you at a saving in price.

OUR GUARANTEE

Our capital stock is $2,000,000. Any bank or Commercial Agency, or any publisher will confirm our responsibility. We have advertised in this paper for many years. Ask any publisher what he thinks of the Chicago House Wrecking Company; get their personal opinion of the values, and our square methods of doing business. We guarantee each and every article that we sell to be exactly as per our representations. Should you buy anything from us that fails to come up to our representations, or does not agree with your expectations, we will take back such unsatisfactory merchandise at our freight expense. We want satisfied patrons.

FENCING

Brand New Wire Fencing Less Than
1c Per Running Foot

Biggest of all offers of the past. We come to you with the most wonderful proposition ever known, and offer you the very best woven wire fencing at a fraction of it's real value; lower in price than ever before, not withstanding that all other merchants and manufacturers have advanced their prices on fencing. We are determined to simply get all the business in sight, and with that in view, we bought up from manufacturer's sales, 150 carloads of High Grade Woven Wire Hog, Cattle, Field and Poultry Fencing, Barb Wire and Nails, in quantities sufficient to take care of our regular customers and those who will quickly respond to this advertisement.

Barb Wire Less Than 2c Per Rod

Galvanized, two-point Barb-Wire, full weight (not the light kind) put up regular on spools, containing about 100 lbs. to a spool. It is made of No. 12½ wire, with good weight barbs. Price per 100 lbs. during this sale, **only $1.95. Order by Lot No. AB-600.** Several thousand spools of this Barb Wire, Painted, price per **100 lbs. $1.75. Order by Lot AB-500.** Also have in stock 1000 spools of light weight, new galvanized barb wire, put up 80 rods to the spool, made of No. 14 galvanized wire, No. 15 barbs, barbs 5 inches apart; price per spool of **80 rods $1.45. Lot AB-400.** We also have several other bargains. You never had a chance like this before, and we advise that you send us your order today. Don't wait until the material is sold—we cannot hold this quotation open.

Galvanized Hog Fencing
At a Material Reduction in Price

100,000 rods of 26 in. Galvanized Steel Spring Wire, 26 in. high, hog fence, put up in 10, 20, 40 and 60 rod rolls, made with 7 bars, spaced 12 in. apart, with No. 9 top and bottom wires, No. 11 intermediate wires, heavier than the regular fencing offered. Price per rod, during this sale, **only 15c. Order by Lot AB-900.**

Same fencing spaced 6 in. apart, per rod during this sale, **only 21c. Order by Lot AB-1000.** Other heights at proportionately low prices.

High Grade Poultry Fencing
48 in. High, Per Rod 27c

A complete stock of all heights of Woven Wire Fencing for every purpose. Do not delay your order, but send it in at once, even if you are not ready to have it shipped. We will hold the material ready to deliver when you want it.

Several Carloads of
Galvanized Wire Shorts

This is smooth wire, put up 100 lbs. to a coil, first-class for general use. Comes in sizes from 6 to 15 gauge. **Price for 9 gauge, $1.25 per 100 lbs. Lot AB-1200.** Other sizes in proportion.

Some Big Bargains in Nails

At last we have the bargain of bargains. 10,000 kegs of genuine galvanized wire nails; will outlast all other kinds. Put up in regular kegs. Price per keg of 100 lbs., as follows:—

10 pennyweight, $2.00
8 pennyweight, $2.10
6 pennyweight, $2.15
Shingle Nails $3.00

Also 5,000 kegs of Nails, mixed all kinds in a keg; good assortment, handy to have around your workshop. During this sale only, **per 100 lbs., $1.45. Order by Lot AB-1100.** We have other bargains in nails.

Also, in this same job, we have 5,000 kegs of Fence Staples, galvanized; **per keg, $2.00. Lot AB-1400.**

Crimped wire for reinforcing, cut to any desired length: **per 100 lbs., $2.25. Lot AB-1300.**

We have bargains in every line. Write us today for our Wire and Fence Catalog, but the best thing for you to do is NOT TO DELAY, BUT SEND IN YOUR ORDER, and WE WILL HOLD FOR SHIPPING INSTRUCTIONS.

LUMBER

Complete houses and barns at an enormous saving. Never before in the history of Building Material has such an opportunity existed. We offer high grade, brand new complete lumber and building material needed for the construction of houses and barns at lower prices than ever before.

20,000,000 Ft. of New Lumber at Our Yards and Warehouses Ready for Quick Delivery

We have upwards of twenty million feet of first-class, brand new lumber for the construction of buildings of every kind. A wonderful stock of the very finest millwork, interior trim, etc.—enough material to construct cities and villiages everywhere. It is our determination that 1913 will be the "Banner" year in the history of our Great Lumber and Millwork department, and the way we will accomplish this, is by quoting prices that will undersell any possible competition. The proof of this is in our catalog and literature.

Write today and tell us what you contemplate improving or building during this Spring — talk to us plainly, and we promise you the advice straight from the shoulder. No other concern in the world is equipped such as we are. Right in our main yard and warehouses, at Chicago, we can load you out complete, at one time, and in one carload, every single article required for the improvement of the building you have in mind. No where else can you go and get such service.

House No. 6A

$725.00

Buys the material to build this 2-story modern, 8-room residence. Write for description.

Personal Service To You

You can get the kind of service that will give you absolute satisfaction — satisfaction from the word "go." If you have ideas of your own as to the kind of building that you want, we will give you the benefit of the Greatest Architectural Department in the world. Will furnish you with plans according to your own ideas, and will quote you a price on the material that will make you a wonderful saving. Dollars saved are dollars earned.

Write today for our **Book of Plans** and **Latest Catalog of Building Material** and Supplies.

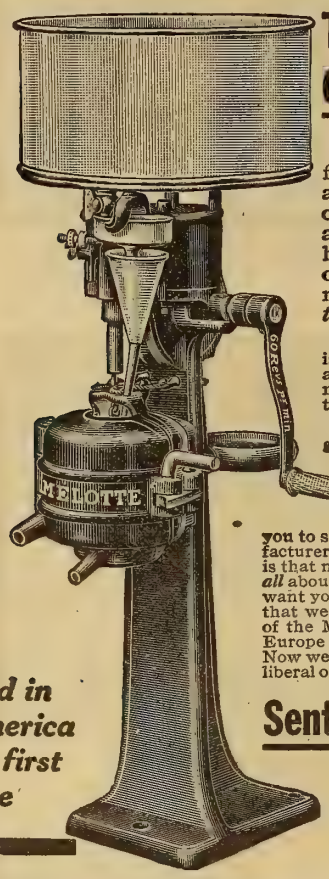
GREATEST Cream Separator Offer!



Sold in America for first time

The Melotte Cream Separator GUARANTEED FOR 15 YEARS

This is positively the first bona fide, no-money-down offer ever made on any cream separator. No manufacturer of any separator ever *dared* to make such a startling offer before. All others who have ever *pretended* to offer you a free trial or to send their separator without any money down have taken care to get *something* out of you first.

But we don't want *anything*. All we ask is your simple request. We send the cream separator direct to your farm absolutely without any money down. We can afford to do this because the Melotte sells itself.

We want you to read every word of this great offer. It is an offer which positively proves the *absolute merit* of the great **Melotte Cream Separator.** You are given the opportunity of seeing just how much cream this marvelous separator will extract from your milk before we ask you to send us one cent. You never saw another manufacturer who was so open-handed in his offer. The reason is that no other manufacturer ever wanted you to know *all* about his machine *before* paying him anything. We want you to know all there is to know because we know that we have the separator that is right. The principle of the Melotte has been *proven* to be right throughout Europe and the greatest dairying countries in the world. Now we want you to read every word of this wonderfully liberal offer.

Sent Without a Penny Down

FREE Trial!

Your simple word that you would like to see this cream separator in your own barn or dairy house brings it to you instantly. We neither ask nor want you to send a penny. The Separator goes direct to you. You set it up, give it a thorough test with the milk from your own cows. We give you a free trial that IS a free trial in every sense of the word. There is no C. O. D.—no lease, no mortgage.

Some people pretend to give you a free trial, but they ask you to give them your money first. We are not afraid to let our separator speak for itself. Test the Melotte Cream Separator in every way, watch your profits go up, watch the increase of the amount of cream, then, if you do not believe that you ought to have a cream separator, just send it back at our expense. If, however, you decide to keep this genuine Melotte—the peer of all cream separators—the separator that gives you greater profits than any other—makes every cow you have give you 100% greater value and insures you greater profits from your dairy than you ever made before—we will allow you to keep it on extremely easy

Melotte Machine Runs 54 Years

At the Melotte works one of the Melotte Separators has been working every day (driven from the shafting) since Nov. 5, 1900, running 10½ hrs. per day—or 19,687 hours at a cost of only $7.50. Reckoning that a farmer works his separator one hour per day, the 19,687 hours represent (on the farm) a period 19,687 days, or nearly 54 years. Therefore, the total cost of maintenance for the Melotte separator for 54 years, inclusive of oil, will be only $7.50. At great trials of separators held at Boulogne, France, Oct. 5 to 9, 1905, under the auspices of the Federated Agricultural Societies of the North, the Melotte easily vanquished all other separators—proving the cleanest skimmer and taking less power—and was **AWARDED THE GOLD MEDAL.**

Monthly Payments!

These payments are so small that you will hardly notice them. You only pay out of your increased profits. You don't need to be without a cream separator when you can put the separator right in your dairy house and let it pay for itself.

This is what we want to demonstrate to you. We want to demonstrate and prove beyond all peradventure that the Melotte Cream Separator does pay for itself. Only a few months' use of a Melotte Cream Separator and you will be satisfied that this statement is absolutely correct. A few months and the separator has paid for itself. It has not cost you a penny because the increased amount of cream has paid for the machine.

We don't want to tire you with a long discussion of how our cream separator is made here. You can best understand this if you let us send you our free catalog. Besides this free catalog we have another book which we should like to place in your hands.

Valuable Book "Profitable Dairying" Sent FREE!

Clip Out Coupon—

Send Today! It Brings the FREE DAIRY BOOK

Just ask for this book and it will be sent to you. It is free. Place your name on the coupon, cut it out, and mail it at once. Then we will send you our great free book, *"Profitable Dairying,"* telling you everything about cows and dairying, butter and cream—how to feed and care for cattle, how to make them twice as valuable as they are now, how to make more money than ever before out of your cows. This book is written by two of the best known dairy scientists in the country—Prof. G. H. Benkendorf, Wisconsin Dairy School Agricultural College, Madison, Wis., and K. L. Hatch, Winnebago Co. Agricultural School, Winneconne, Wis.

We will also send you Our FREE Catalog, describing fully the great Melotte Cream Separator and telling all about our liberal terms. Find out about these terms anyway, even if you don't expect to buy a cream separator *just now.* Remember, no money down, free trial and easy payments—and we let the separator tell its own story. The most sensational offer ever made in connection with a cream separator. Our catalog tells all about it. Don't delay. **Sign and send the FREE coupon RIGHT NOW!**

Concrete Fence Posts Are Permanent Posts

Wooden posts rot, may burn and must be frequently replaced.

Concrete Lasts Forever

Build your fence with concrete posts. They hold wire securely—will not heave from frost—will not pull up easily—need not be painted—will not be destroyed by worms, insects or other pests. Time and weather cannot affect them. Even a forest fire leaves a line of concrete posts undamaged. Farmers may make their own posts at odd times at a cost not exceeding the cost of good wooden posts.

Write to us for information about making concrete fence posts. Send for Farm Cement News Nos. 7 and 8, vol. 1, which tell how to make concrete posts. Use

UNIVERSAL PORTLAND CEMENT

For good concrete work. It is always uniform, has good color and its quality is the highest. UNIVERSAL is for sale by representative dealers everywhere.

Polarine

FRICTION REDUCING MOTOR OIL

Wherever you go—in tropical or zero weather—and whatever the make or type of gasoline car you drive, there is *one* oil that reduces the motor friction to the point where the greatest power develops and cuts down the upkeep cost by eliminating unnecessary repairs.

That oil is Polarine and it is *sold everywhere.*

Always flows freely—even at zero—and maintains the correct lubricating body for any motor speed or heat.

Made by the world's oil specialists after 50 years of experience in scientific lubrication.

Use it and add to your motoring *pleasure.*

DES MOINES, IOWA, THURSDAY, MARCH 13, 1913.

Teaching the Farm Girl to Cook

How the Campaign to Add Domestic Science to Every Rural School is Gaining Ground Throughout the Entire Grain Belt---Notable Success on Little Money in Kansas.

THE movement to improve the farm home, by adding city conveniences, has extended until a widespread campaign is now under way to make the farm girl and the farm woman a better and more scientific cook. Not that the farm wife of yesterday was guilty of absolute ignorance of the gentle art of making food stuffs palatable and digestible, but that the fine art of domestic economy is making such rapid progress toward absolute perfection it is only fair the farm cook should have the same advantages as her city cousin.

A bill which has recently passed one of the houses of the Iowa legislature (with good prospects of shortly becoming a law) provides for the teaching of domestic science (as well as elementary agriculture) in every public school in the state, both urban and rural, the course of instruction to be offered after July 1, 1915. This bill is in line with the recommendation of the Better Schools Commission, appointed to study the needs of rural schools, in particular. Similar laws are in effect in other grain-belt states, with notable success, and the day is not far distant when no school course will be considered complete without instruction, both to farm girls and city girls, in the culinary art.

The hue and cry which went up in Iowa when it was proposed by the state board of education to remove the domestic science course from the state agricultural college has resulted in a plan to have such courses taught in all three of the state's institutions of higher learning and to add to, rather than detract from, the opportunities the farm girl has long enjoyed at the agricultural college to learn how to become a better housekeeper. The plan of the state board to change the courses of study in the three institutions might have gone through had it not been for the plan to deny farm girls a chance to learn how to cook scientifically. Such a storm of protest arose as convinced not only the board, but every interested observer, that the movement to relieve the farmer from floundering in an "everlasting sea of grease" is a permanent and far-reaching one.

For $50 any rural school can buy equipment sufficient to teach cooking. And for two and one-half cents a lesson for each girl this department may be maintained in one corner of the school room. These figures are from Miss Ida Rigney, now with the Kansas Agricultural College, and who for several years has been teaching domestic science in the public schools. Miss Rigney says a $50 outfit is not skimpy. It includes everything necessary—a stove, a work table with cupboards and drawers, and all the utensils. At this low figure a department of cooking is within the reach of even the smallest district school, says Miss Rigney. Within the last two or three years between 500 and 600 rural schools in Kansas added courses in either cooking or sewing. Here is the itemized list of equipment needed and the cost:

Article.	Cost.
One table	$20.00
One stove (2-burner coal oil)	10.00
One oven	2.00
One oil can (5 gallons)	.60
Four dishpans	4.00
Four kettles (gray granite, 5½ inch)	.60
Four saucepans (gray granite, 4½ inch)	.40
Two omelet pans	.40
Four small china bowls	.40
Four teaspoons (plated)	.28
Four tablespoons (plated)	.30
Four paring knives	.20
Four kitchen knives	.36
Four measuring cups	.40
Four cake tins (4½x4½x1½)	.60

MISS IDA RIGNEY, THE KANSAS TEACHER WHO IS SETTING THE GRAIN BELT A GOOD EXAMPLE.

Four pie tins (5 inch)	$ .32
One grater	.15
Two biscuit cutters	.10
Two egg beaters	.12
Two egg whips	.10
Two rolling pins	.50
Four bread pans (9½x4½x3½)	.80
Four molds (tin)	.20
Two soap dishes	.30
Four scrub brushes	.20
Two towel racks	.50
One can opener	.05
One tea kettle	1.00
*One meat grinder	.85
One lemon reamer	.10
Two strainers	.10
*Two toasters	.25
One small garbage can	.50
*One broom	.50
One dust pan	.20
One muffin tin	.40
One butcher knife	.25
*One frying basket	.15
*Two potato mashers	.10
One flour can (5 pounds)	.10
One sugar can (5 pounds)	.10
One pint Mason jar for salt	.05
One pint Mason jar for pepper	.05

*CHINA FOR SERVING.

One cup	$ .15
One saucer	.15
One small plate	.15
One sauce dish	.10
One sherbet (stemmed)	.10
One water glass	.10
One bouillon cup and saucer	.15
One knife	.50
One fork	.50
One bouillon spoon	.30
One salad fork	.35

*Where funds are low, these may be omitted from the equipment. The cost may also be lessened by reducing the number of several items.

COST TO STUDENTS.

One apron	$ .50
One dish towel and cloth	.05
One hand towel	.05
One holder	.05
One notebook	.05
Total cost of equipment	$51.13
Total cost to student	.80

The table is an important piece of equipment. It should be square, with drawers and a cupboard on each of the four sides of which to keep the utensils. A table four feet square is large enough to satisfy four girls comfortably, and eight if necessary. If there are more girls in the school different hours for the work may be arranged. Such a table probably can be made for $20 to $25.

The maintenance of a small cooking department in one corner of the school room amounts to nearly nothing, as stated before. But by making a charge of a few cents for the articles cooked—usually the girls like to take the results of their efforts home to show their parents—the teacher acquires a fund which may be used in buying more equipment.

A good many Kansas schools find it convenient to devote Friday afternoon, after recess, to the classes in cooking, agriculture or manual training—one lesson a week. The boys do their problems in agriculture or manual training in one corner of the room and the girls work in another.

The tendency throughout the entire grain belt is to make country schools more practical. While the boys have their corn-judging contests and their general instruction in agriculture, it is only fair and proper that the girls should have every chance to become better housewives. No sign of the times is more fraught with promise than this one of giving the farm girls the culinary instruction and domestic science training all too long denied them. Kansas deserves much credit for setting a splendid example in this line. Cooking schools in various towns, attended by townspeople and farmers' families as well, have proved highly successful in the past, a week being devoted to each town, with instructions given by domestic science experts from the state college of agriculture. There is a growing conviction that the best and fullest results cannot be had until the housekeeper is taught in the art not only of making home attractive, whether it be in the city or in the country, but of preparing food so as to give the maximum of physical strength with the minimum of indigestion. That farm wives are taking advantage of their opportunities so eagerly is a most pleasing sign of the times.

TO SUCCEED WITH LIVE STOCK.

There are few who do not admire beautiful animals. The son of a successful stockman born and reared on a good stock farm where high-class animals are bred and fed has unlimited advantages and bright prospects for success. Every year we become more and more convinced of the importance of getting greater returns from our acres. While it may be possible by the judicious use of legumes, commercial fertilizers, judicious tillage, etc., to build up and improve impoverished lands without live stock, experience teaches that it is not at all likely to be done, and it is generally conceded that if the fertility of the land is to be maintained and increased the feeding of live stock must be continued.

To have a good stock farm is a decided advantage to the stockman. This farm if located where the winters are not too long and hard is highly advantageous. Surely the soil should abound with lime and phosphorus as this insures grasses and grains of all kinds, rich in all the essential elements for the proper development of the animal's body. This farm to be ideal should be well watered with never-failing springs.

To succeed as a stock breeder some particular class of stock must be chosen and this class should suit the farm. A good hog farm is not usually well adapted to sheep and a beef cattle farm may be entirely unsuited to dairying. To succeed with live stock the breeder should choose the class he likes best and that suits his farm.

The fact should always be remembered that improvement depends largely upon the selection of the breeding animals and unless the breeder is a good judge his prospects for success are few indeed. So one of the very first essentials in the improvement of live stock is to learn to judge in order that the right kind of individuals may be selected for breeding purposes. Great judges are born, not made, but anyone can learn to be a fairly good judge, good enough at least to be able to breed market-topping animals. To learn to judge animals the breeder if possible should visit the great market centers and see what types are in greatest demand and are bringing the highest prices. He should visit successful breeders of the class of animals he expects to produce, read live stock journals, attend the stock shows and, if a young man, he should go to the college of agriculture and take the courses in stock judging.

After the class has been decided upon and one has learned how to select, then a breed should be chosen. This should be from some of the good old reliable breeds that have proven a success. We do not need new breeds, but more good individuals of the breeds we already have.

In order to produce choice animals the very best of sires must always be used. It is dangerous to use inferior sires when the offspring are to be used for breeding purposes, as this inferiority will be sure to crop out in a few generations. The breeder should never be satisfied with anything but a high-class sire, one that is a good breeder and with good ancestors as far back as possible. The sire must not be expected to do all. Good dams must be used. These must be of the same breed, the same type and with the same uniform ancestry, if high-class youngsters are to be expected. When these rules are strictly adhered to, breeding will not be a lottery and good animals of the desired type will be produced invariably. Just as long as we continue to cross, recross and mix up breeds just so long will the big bulk of our live stock remain inferior and of no recognized breeding.

The successful breeder will always retain the very best young females from his very best dams for breeders. No breeder who sells the better females need ever hope to make much progress. Proper feed and care must not be overlooked, as this is more important even than breed. Pedigreed animals half fed and cared for will be scrubs in the eyes of the public and no amount of talk will convince buyers to the contrary. The farmer who produces choice animals is a benefactor. Young men seeing his good works will profit thereby. Producing high-class animals for the block is a safe business and one in which there is both pleasure and profit.

PRESIDENT WILSON ON THE FARMER.

Farm demonstration work and a better system of rural credits are two of the things to which President Wilson pledged himself in his scholarly inaugural address. The address was a declaration of principles, rather than of platform planks or personal pledges, but of the dozen big and important matters which the incoming president listed as deserving of immediate attention, these farm issues stand among the most conspicuous. The president's reference was brief:

A body of agricultural activities never yet given the efficiency of great business undertakings or served as it should be through the instrumentality of science taken directly to the farm, or afforded the facilities of credit best suited to its practical needs.

This brief declaration, however, taken in connection with President Wilson's more extended remarks on the same subject recently, shows his interest in the farmer's welfare and his plan to bring the needs of the farmer prominently before the attention of congress. Delivering an address to the New Jersey legislature only a few weeks ago, President Wilson elaborated his ideas on farm demonstration work in this manner:

The farmer has not been served as he might and should be. We have set up and subsidized agricultural schools, horticultural schools, schools of poultry raising, and the rest, and they have done excellent work. Our support of them should be hearty and generous. But a more effective way still has been found by which the farmer can be served. Lectures and schools and experimental farms attached to schools like laboratories are excellent, but they do not and cannot of themselves push their work home. Some states have gone much beyond this and we should follow them with zest.

The thing that tells is demonstration work. The knowledge of the schools should be carried out to the farms themselves. It does not require a great deal of money to train men and send them out for this work, and when once it is begun it goes on of itself. Private persons, voluntary independent associations, county authorities take it up. It is a thing that gives life as it goes. It awakens countrysides and rouses them to take charge of themselves. It is not help from the government, it is merely light from the government. The light does the rest.

That the new president proposes to continue the investigation of foreign rural credit systems is evident from the brief statement in his inaugural address. Ambassador Herrick has already filed an exhaustive report, while a congressional investigation is proposed, with representatives of farm journals and societies to visit Europe this summer and examine carefully into the workings of the credit systems so successfully operated there. Whether similar societies are ever organized in the United States or not, it is believed that a discussion of the subject cannot fail of beneficial results and President Wilson's interest in the subject is evidence that he does not propose that the agricultural advance of recent years shall be checked or deflected in the least. Appointing a grain-belt man as his secretary of agriculture and pledging himself to the farmer's best interests in two important matters starts the new president right, so far as looking after the farmer's welfare in a patriotic and non-partisan manner is concerned.

RIGHT WAY TO DISK LAND.

One of our subscribers calls attention to the mistakes often made in disking land. The writer mentions particularly the unwise plan of disking a field one way, then turning and crossing it, thus blocking the field off into squares, a ridge being formed by the outer disks throwing up the soil. When a field is disked one way, then crossed the other way, the appearance, when finished, is much like that of a checkerboard.

All land requires at least two diskings, and the best way of doing this is to "lap half" and do the job up as fast as the work progresses. If, however, it is preferred not to do both diskings so close together, the "lapping half" may be done later, but in no case can better work be done by crossing the direction of the first disking. This can be done by straddling the ridge made by the outer disks, and the outer disks will then fill the cut made by the center disks the first time over the field, leaving the surface level so far as the throw of the disks are concerned.

Rather than put weight on the disk gangs to cut deep, we believe in using a sharp angle. This pulverizes the soil better and moves it further, giving it a greater throw. When disking in heavy stalks it may be necessary to add weight, but a good disk will do all the work that four good horses care to do if the shift levers are set to give the sharpest angle. But the main thing to remember, as our subscriber states, is not to disk one way, then cross it the second time over, as this blocks the field off in squares, each square marked by the ridge left by the outer disks.

KEEPING TAB ON INCOME AND EXPENSES.

This paper has not given a great deal of attention to the problem of farm bookkeeping nor do we propose to apologize at this time for our conduct in this regard. We have always held the belief that a successful farmer would be able to work out a system of bookkeeping for himself that would be well adapted to his needs. On the other hand we have felt that the man who is not successful in getting profitable crops from his soil can be aided but little by keeping a record of his mismanagement. In many cases the bank account at the end of the year tells the important part of the story.

However, we find no fault with those who emphasize the importance of keeping an accurate record of farm transactions. Such a record is advocated by one of our subscribers, who says:

If you have never kept a record of the income and expenditures of the farm, this spring will be a good time to begin keeping one. There are many books especially prepared for this purpose. They cost from fifty cents to $1. They are no doubt well suited for the purpose for which they were designed. If you do not care to buy such a book, a very good record book can be purchased at the drug or book store. I have such a book which I bought for fifteen cents and which has served me well for a couple of years.

In this book is jotted down every article sold from the farm. I can turn to this book and figure up just how much was sold from my farm last season, from asparagus to cantaloupes and watermelons. I know just exactly the income from my place and the expenditures, or you might say the expenses, of getting my crop on the market. There is a great deal of satisfaction in referring to this book, and I am often called upon to use it.

In this book can also be kept every item of purchase from toothpicks to winter clothing. By thus keeping a record of one's expenses a spirit of economy will be encouraged and developed, and one will come to realize there are a great many things that one does not really need. So he will get along without them and keep his money in the bank. I am safe in saying that the man who keeps a record of his income and expenses will be 10 per cent more economical than the fellow who does not. Thus a spirit of thrift is encouraged.

We cannot deny that there is a certain educational value to be derived from the keeping of accounts. While every farmer knows which is the most profitable and which the most unprofitable part of his farming operations, yet there is a satisfaction in summing the whole matter up at the end of the year for the purpose of confirming what might otherwise be a guess. As such a system as here advised, the writer asserts, cultivates the habit of thrift, then to that extent must it be endorsed because thrift is a most highly commendable personal attribute. After all there is some solid satisfaction to be derived from knowing just what the poultry are paying, what the sheep are contributing to the welfare of the farmer, what the hogs are doing to lift the mortgage, what the cows are doing to help pay some of the larger expenses of the farm and incidentally to know the exact value of the grain that is sold direct from the farm. A sensible system of farm bookkeeping might more quickly than otherwise convince a farmer just where the emphasis should be placed in order to derive the greatest revenue from the least expenditure of labor.

BELIEVES IN DEEP CROSS PLOWING.

A subscriber from the semi-arid belt, Mr. C. O. Woodmansee, expresses the belief that deep plowing will answer an even more important purpose in what he calls the rain belt than it does in the semi-arid region. Commenting on the advice recently given in this paper to a subscriber who had fall plowed his sod land and who was asking for information concerning the best crops to sow or plant, he says:

If the subscriber has plowed his sod as it used to be done in Iowa years ago when the writer was a boy and the greater part of the state was covered with "blue stem" grass, turning the sod only about two and one-half or three inches deep, the best thing for him to do is to plow it again about eight or ten inches deep (twelve inches would be better). It is a mistake to rot the grass roots as quickly as possible; the longer you can preserve the grass roots the longer you preserve the humus, which is the life of the soil. If your subscriber will take a good stirring plow and put on a rolling cutter, and hitch plenty of good horses to it, and turn the grass roots down from eight to twelve inches deep, he will find that by properly preparing the surface with disk or harrow (a harrow is better in a clay soil for the reason that it does not pack the soil), he will find that he can raise any crop suitable to the climate.

In plowing under sod as mentioned above it is advisable, of course, to plow across the breaking as much as possible. In this country a "two-way" plow is used, and the "dry land" farmers are finding that conservation of humus and moisture are the two things necessary to their success. The methods which are successful in the semi-arid districts of the West should be doubly successful in the rain belt.

We have many times called attention to the fact that the average farmer plows too shallow. But on the other hand we would be endangering the welfare of some of our subscribers if we endorsed in detail the suggestions made by this subscriber. On soils that are inclined to be stiff in character, that is, either clay or clay loam, we cannot advise plowing from eight to twelve inches deep in the spring because such a practice means the bringing of so much inert material to the surface where the feeding roots are that the first crop is actually apt to be starved to death. In the corn belt we need a variety of weathering influences to liberate our fertility and that is why the labor of plowing deeply must always be performed in the fall of the year. We believe that the introduction of deep tillage machinery will eventually bring about a great change in the practice of corn-belt farmers because that type of implement leaves the inert material in the bottom of the furrow in a pulverizing condition. With that system we believe that great good will come as the result of increasing the root pasturage of crops. With the ordinary plow, however, it is easy to make a blunder by doing the work at the wrong time.

COUNTY AGRICULTURAL EXPERTS.

In a recent report published by the national department of agriculture on the value of farmers' institutes, attention is called to a serious defect in agricultural institute work. Considered as an educational force the institute system as carried on in the past is too transient in its nature because in many instances it completely disappears from the field of activity for the greater part of the year. During the institute season a force of lecturers comes into a district, comparative strangers to the people and the conditions that exist, deliver addresses and then leave, never perhaps to appear again in that community. The next year the same or different corps

of institute lecturers come in and go through the same process of lecturing and disappearing, not responsible for getting their teaching into operation in any of the districts they visit.

As advertising agricultural education this system has operated very well, according to institute specialist, Mr. John Hamilton, but now that many communities have become informed with respect to the value of science applied to agricultural operations, some more substantial assistance is demanded and more extended instruction by a responsible body of teachers whose advice is tested in the community in which their instruction is given by actual demonstration in the field. There is need now in many localities in all of the states for a man or a corps of men to be located permanently in each county to give attention to the development of its farming interests who will devote their entire time to professional work as advisers and demonstrators along the various lines of agriculture and home economics in which the community is engaged. The valuable results that have attended this form of assistance in the matter of developing and improving agriculture commend it to the attention of the directors of extension work, whether in connection with the farmers' institutes or the agricultural college. The method has been tested abroad until there is no longer a doubt as to its practicability or value.

In a report to the board of agriculture and fisheries and education, London, 1910, the rural education conference of Great Britain, after a very exhaustive study of methods for securing improvement in agricultural operations, recommended the establishment by the county councils of a staff of agricultural experts in each county in England to supervise agricultural operations and to give advice to farmers of the county respecting the improvement of their crops and the general betterment of their condition.

THE SILO AND THE MANURE CROP.

In the following communication an Illinois subscriber calls attention to a matter that has not always received a proper degree of emphasis, namely, the effect of the policy of using a large amount of ensilage in increasing the supply of farmyard manure:

By actual trial I find that where cattle and stock enough to consume 100 tons or more of silage are kept on the farm and a liberal use of bedding is practiced, the manure amounts to from 400 to 600 tons of good ordinary farm manure. Fifteen loads per acre will restore the land to its former fertility, if 100 bushels of corn per acre have been removed. So we find we have forty acres covered each year by using plenty of bedding and keeping it hauled out closely. What money value that will produce depends on the crop and the weather and the kind of tillage, whether bad or good. But I am safe in saying that the land that has been so treated year after year is usually worth $50 more per acre than that that has not been so treated.

Some may not agree with me on this, so I will phrase it another way. On land so treated one can raise $50 more per acre of any kind of ordinary farm crops during the time it takes to rebuild the other land, which amounts to the same thing. But someone may say, "I can keep up my farm with clover." I acknowledge clover is the greatest restuvenator known, all things considered, and for the sake of the argument grant the contention; with the help of clover one can raise sixty bushels of corn per acre. Suppose he applies the fifteen loads of manure and raises eighty bushels per acre, he would have a gain of forty bushels the first year. Then, applying his own rule, with the aid of clover he maintains the eighty-bushel crop, say, for twelve years four crops of corn would equal a net gain of eighty bushels, besides gains in wheat and clover. But it won't do to figure the gain in fertility for only one year at a time, for the sum of twenty years of manure farming over the grain farming would mean more than the grain farmer would credit to the silo.

While we are not prepared to agree with this subscriber that the feeding of 100 tons of ensilage and the use of such bedding as is found around an ordinary farm will make from 400 to 600 tons of farmyard manure, yet the quantity of manure made (a large amount we concede) when it is sensibly applied to the land will in reality greatly increase productiveness. There are a great many factors that tend to bring about increase in the value of corn-belt land. Among these we find the development of markets, improvement of schools, betterment of roads, improved means of railroad transportation, the building of interurbans, etc. We say that the effect of these is to increase the value of land, but the combined effect of all of these factors cannot equal the results to the owner of carrying out the sensible policy of increasing farm fertility. Land values in some parts of the corn belt are not actually based on soil productiveness. This is shown in certain instances where land has doubled in value without the productivness of the acre increasing one iota. Land can only maintain its present value and continue to pay interest on its capitalization by the rapid introduction and application of such a policy as will lead to its increase rather than its decrease in productiveness.

ENSILAGE FOR WORK HORSES.

A subscriber, Mr. A. W. Hess, of Pocahontas county, Iowa, gives his experience in feeding ensilage to work horses, in the following communication:

I have had very satisfactory results in feeding ensilage, not only to growing colts and idle horses, but also in the case of work horses. Last summer my ensilage lasted until the middle of June and I fed one bushel to a team three times a day and in addition each horse received eight or ten ears of corn. My horses were given good stiff work and yet I have never had them come through in better shape. I plowed three and one-half acres a day for ten days with three 1,200-pound horses and they were just as much up on the bit the last afternoon as they were when I began.

I have learned that exceedingly great care must be taken in feeding ensilage to horses to see that they do not get any moldy or spoiled ensilage. By taking a little extra pains it is not a difficult matter to avoid using anything that is spoiled. I might say that in addition to the corn and ensilage my work horses were fed a little hay, but as hay was very high in price last year I want to assure you that their hay ration was a very small one. On high-priced land hay is not a very paying crop and more and more farmers must adopt the practice of feeding all their live stock on ensilage or corn fodder. I brought colts through the winter in rather good shape on absolutely nothing but ensilage and of course at a cost very much lower than if grain and hay were used.

Thousands of our readers are now feeding ensilage to some class of live stock. Presumably a great many of these are using it for the first season and in a way the experience of feeding ensilage is experimental with them. This being the case we are glad indeed to have the experience of Mr. Hess because it may lead a great many of our readers to feed a little ensilage to their work horses during the coming spring months. If one individual can feed a horse a bushel and a half of ensilage daily with good results we see no reason why another cannot attain an equal success by following the same plan. Where hay is scarce and high in price it is well worth a trial.

SEEDING DOWN WITH WINTER WHEAT.

It is easier to obtain a good stand of clover and timothy when the same is seeded with winter wheat than it is with any other nurse crop. Wheat matures earlier than the spring grains and the crop is usually harvested before the dangerously hot weather begins.

There are two general plans that might be followed in seeding down winter wheat ground. A very common practice is to sow the seed during the month of March so that it is afterwards covered by the process of freezing and thawing. "Sowing on the last snow" is an adage hoary with age and yet after all carrying with it a very large common-sense germ.

According to the second plan seeding is delayed until the ground is sufficiently dry so that the surface can be harrowed without puddling the soil. Two or three harrowings will invariably benefit the winter wheat crop and we have never known an instance where labor spent on the surface with a harrow did any injury whatever. The seed is covered in this way and an important effect is to create a mulch on the wheat ground which prevents too rapid evaporation of the moisture and also prevents the caking or hardening of the surface soil.

As to which plan should be followed we do not propose to say, because sometimes it is advisable to sow early while in other instances it is better to sow late and harrow the ground. Our preference is for the latter plan because we prefer to have the seed covered by mechanical methods and as said before, the practice of harrowing must be commended because of its benefit to the wheat crop.

HELPING THE BOY.

It is no new idea, but because it is a good one the school superintendent of the large grain-belt city who spoke the following is deserving of commendation:

I believe every boy who is raised on a farm should be given his property share in that farm that he may have an interest in farm life. It is a long, long time in the life of a boy until he becomes twenty-one years of age. Farm boys become workers on farms by the time they are six and seven years old. The farm boy meets complexities of life of which the city boy has no knowledge whatever. His father does not always make allowances for the fact that he is only a boy after all, and not at the age when he has best judgment. A farm boy has to know everything on the farm from teaching a calf to eat to the more complex farming problems and he is expected to meet them. The boy gets whipped because things go wrong on the farm because he is supposed to know things to do at the right time. That is not quite justice. I have a great deal of sympathy for the farm boy. I was one myself and sat on a horse that pulled a harrow when I was but seven years old. If a boy was given a part ownership of a horse, cow or pig he would be far more interested in the development of the farm, because he would feel that he was a part owner. The trouble with many farm fathers is that they consider their sons so much property and free labor. My plan would be to give the farm boy time for himself.

Not the least factor among those which cause the farm boy to look enviously toward the city is that the city boy has innumerable opportunities to earn a few dollars before and after school and thus buy the trinkets dear to the heart of boyhood. By carrying daily papers, cleaning snow off the sidewalks, running errands and in a host of other ways, the city boy may accumulate a few dimes and quarters and in time come to feel himself a real millionaire. Unless the farm boy's father rewards him for his work, or permits him to work for neighbors and keep the money thus earned for himself, or gives him a tract of land or an animal for his very own, the farm boy is likely to be so discriminated against as to cause bitter feelings and add another to the all too long list of boys who quit the farm for the city, to their sorrow eventually, fully half the time. Give the farm boy something to call his own, let him learn the use and value of money by personal experience, call him into frequent consultation and respect his opinion, even if valuless, and the trend of young manhood from the farm to the city will no longer be the vexatious problem that it is now.

DENOUNCES THE BURNING OF CORNSTALKS.

Mr. S. M. Jordan, manager of the Pettis county (Mo.) Bureau of Agriculture, strongly condemns the practice of burning cornstalks. On this subject he says:

Cornstalks should be broken down at least by this time, and then when the ground conditions are right we should take a sharp disk and by going over each row we cut the stalks pretty well; but the really great value we get out of that process is the working of the soil. I know of no conditions in Pettis county that would by any means justify burning the cornstalks. If the land is already too rich we might then be justified, or if the fields last year were badly infested with chinch bugs we might be justified in burning, but under conditions in Pettis county there is no justification for burning these stalks. There is no great amount of soil fertility in cornstalks, but there is vegetable matter and most of our farms are suffering for want of vegetable matter rather than lack of soil fertility. It would decidedly pay to plow them under, even though they did not contain one particle of soil fertility. This vegetable matter renders the soil porous and sponge-like, gives life to the soil and gives it capacity for holding moisture, and it is this condition that prevents washing and makes plant food available to the young plants. Usually all that we can say about burning cornstalks is that it is a very serious blunder.

We are not so sure that conditions never justify the burning of cornstalks. We have tried both plans and our preference would be to carry out the plan outlined by Mr. Jordan. We agree with him that the soil needs all the vegetable matter that is available and as much fertility as it is possible to apply. Our opposition to the plowing under of cornstalks has been due to the fact that we have never been able to cut up with the disk and plow under a heavy crop of stalks so that they would not give lots of trouble later on both at planting time and during the season of cultivation. It is true that a sharp disk will cut most of the stalks into short lengths, but our experience is that a considerable number escape and these constitute a regular nuisance in operating corn machinery.

What is here said does not apply to a light crop of stalks because they can be cut up and buried so as to give little trouble, but in the case of a crop that would yield fifteen or twenty tons of ensilage with stalks running up ten and twelve feet tall, the situation is entirely different if such a crop is simply husked out and stalks pastured as they ordinarily are. Burning wastes a part of the fertility we will admit and all of the vegetable matter, but regardless of this waste we believe that it will always be practicable under certain conditions to burn the stalks.

THE CLIPPING OF HORSES.

Every man who has had experience in handling horses knows how disagreeable it is to start in spring work with horses wearing their long winter coats. If it is disagreeable for the driver it is ten times more disagreeable for the horse. A horse working hard under such conditions must either eat more than the clipped or short-haired horse, or on the other hand he must fall off in flesh. In giving his view on the practice of clipping horses Dr. W. W. Talbot, of Monroe county, Iowa, says:

The clipping of horses is becoming quite a common practice, especially in the eastern states and in our larger towns and cities, and this care of a horse has become a great benefit to his well-being and general keeping. It has been shown a number of times the good to the horse that is clipped, over one that is not, this demonstration being made by large concerns who are owners of many horses. One firm in the East which owns over 400 horses, one spring had half of them clipped. Among those that were clipped they had not one that was sick, while among those with their long coats on they had over 125 horses with colds, coughs, pneumonia and various other lung and skin troubles.

The horse that is clipped of his long, thick, shaggy coat looks better, feels better, works better and will keep and put on more flesh with the same amount of food than the horse with long hair, and the horse with long hair is more predisposed and contracts diseases and skin troubles, especially such as colds, pneumonia, coughs, scratches, grease heel and mud fever, much easier than the horse which is clipped. One man of authority says, "I would just as soon think of going through a year without taking a bath myself as to let my horses go without clipping in the spring."

If a man should become wet from perspiration by hard exertion, he would not like to stand around until dry or go to bed without a change to dry clothing, because of the danger to him of contracting some form of sickness, and the same comparison holds good to the horse with a long coat of wet hair when he returns from his day's work to the stable, wet, muddy and tired.

The clipping of horses is increasing rapidly, and it should, as those owning horses are beginning to see the value of it, both in the general health and appearance of the horse and the saving of feed. The long, woolly coat of hair is very slow to dry out and in this condition it collects and holds dust, dirt and filth much longer and in this way stops and closes the pores of the skin, through which is one of the natural outlets for the escape of waste and poisonous matter of the body. Then the skin becomes cold when the hair is wet after the horse stops his exercise and it requires more feed to keep up the heat of the body and skin besides enough for nourishment. If you want your horse to live long, do good work, feel refreshed and bright after his night's feed and rest, and look better, don't be afraid to groom and, above all, clip off the long hair in the spring.

We believe it will surprise many of our readers to be told that horses with long coats are much more troubled with coughs, pneumonia and other lung ailments than are clipped or short-haired horses. Upon second thought, however, every man knows that it must be unhealthful for a horse to stand over night with a wet coat. There is no reason why the country horse should not have just as good care and attention as his city cousin and among the little attentions that really spell economy the practice of clipping should be given a prominent place. We do not contend that every farm horse should be clipped in the spring, but the late shedders should be clipped always.

Chalmers 1913
MOTOR CARS

Made in Chalmers Shops

"Pigs Is Pigs"

Likewise, also, "automobiles is automobiles." But in breeding either for the market, quality counts. It doesn't pay to run a poor machine any better than it does to breed "razor-backs." High class stock, and high class motor cars are cheapest in the long run.

The Chalmers "Thirty-Six" is built for practical men who want absolute dependability, ample power, durability, and economy of operation—who want all the substantial, solid qualities—for the man who sticks to standard breeds but will not pay for fancy markings.

You can depend on the Chalmers, winter and summer, on hills and on levels, on macadam and in mud. It will never balk, kick, or lay down. It has big wheels, strong axles, rigid frame, a sturdy steering gear, and is built to stand rough work. But it has the lines and finish of a thoroughbred—its strength is symmetrical. It has the style for Fifth Avenue and the stamina for the mountain road.

Note some of the features of the 1913 Chalmers cars:

Electric lights, Turkish cushions, nickel trimmings, improved springs. Chalmers self-starter, long stroke motor, 4-forward speed transmission, and many other refinements and improvements.

Send for our book on the building of a Chalmers car. It is worth your while just to read the book.

"Thirty-Six" (4 cyl. 36 h. p.) $1950 "30" (4 cyl. 30 h. p.) $1600
"Six" (6 cyl. 54 h. p.) $2400

(Fully equipped. F. O. B. Detroit.)

Chalmers Motor Company
Detroit, Mich.

This monogram on the radiator stands for all you can ask in a motor car

Please send "Story of the Chalmers Car" and catalog of 1913 cars

HACKNEY AUTO PLOW

THE HACKNEY AUTO PLOW is particularly adapted to the requirements of farms of small acreage. Being small and light—though strongly built—and operating on three wheels, with the plows or other attachments under-slung, enables it to work in small fields, around trees, get close into fence corners, back up, turn in its own length, and do work that would be impossible for the larger type of tractor. It is the only **ONE-MAN** machine made that can be used successfully on the farm of average acreage, for

Plowing, Seeding, Discing, Harrowing, Harvesting, Threshing, Road Grading, Orchard Work, Grinding Feed, Sawing Wood

and all other work where power is needed. Its successful performances in all parts of the country, in all kinds of soil and under all sorts of conditions, proclaim it the greatest labor-saving device ever invented for the tiller of the soil.

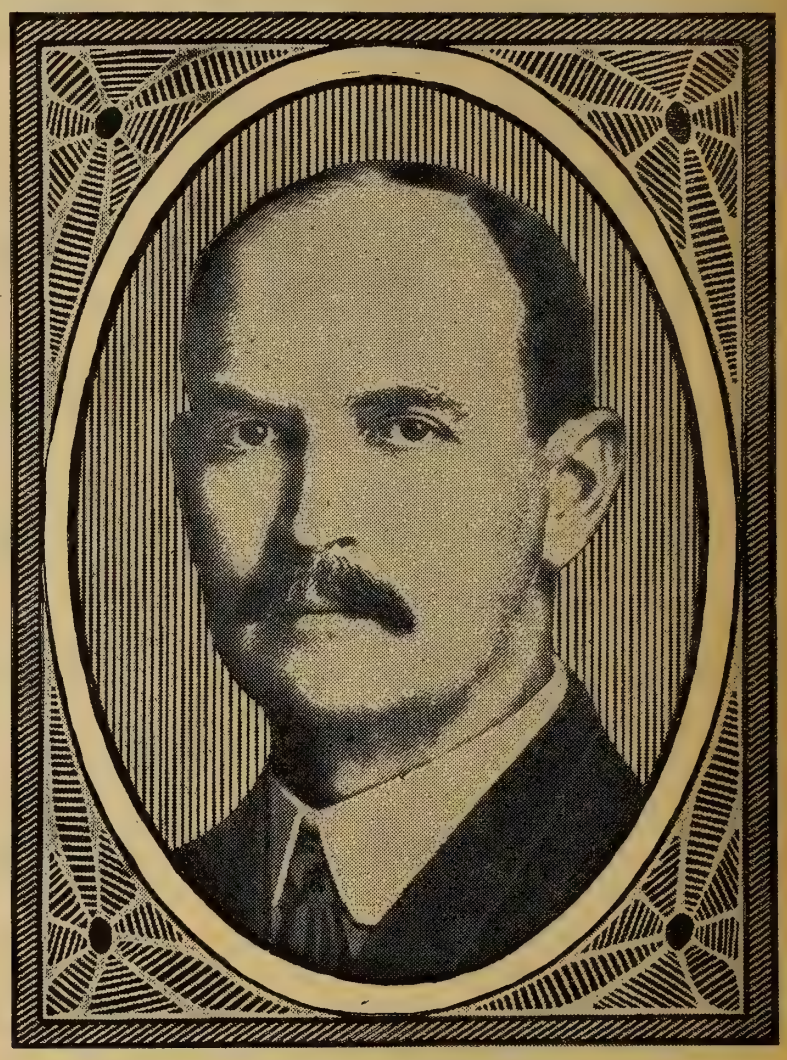
Hackney Mfg. Co.
608 Prior Avenue ST. PAUL, MINN

The New Secretary of Agriculture.

DAVID F. HOUSTON, of Missouri, formerly president of the State Agricultural College of Texas, and for the past five years chancellor of Washington University at St. Louis, has been appointed secretary of agriculture by President Wilson. Secretary Houston is forty-seven years of age, a personal friend of President Wilson and by his administration of the affairs of Washington University has shown himself both progressive and aggressive. His appointment came as a surprise, but is being universally commended by his Missouri associates and those who know him through affiliation in a long and honorable career along educational lines.

Secretary Houston is a native of North Carolina, having been born at Monroe, February 17, 1866. He is a graduate of Harvard and has had numerous honorary degrees conferred upon him, included in the list of institutions which have thus honored him being the University of Wisconsin. Spending the early years of his educational work in the public schools of South Carolina, Secretary Houston went to Texas almost twenty years ago and was on the faculty staff of the state university for eight years, occupying the chair of political economy and serving as dean for three years. In 1902 he was made president of the State Agricultural College of Texas, located at College Station, in which office he continued until 1905, when he was made president of the University of Texas, located at Austin. He remained there until 1908 when he went to St. Louis, becoming chancellor of Washington University, one of the strong schools of the middle West. His splendid services there have given him high place in the educational world, while his devotion to the progressive principles championed by President Wilson brought him in close touch with the present administration and resulted in his selection for the important cabinet position, the former occupants of which have been Norman J. Coleman, of Missouri; Jeremiah M. Rusk, of Wisconsin; Sterling J. Morton, of Nebraska, and James Wilson, of Iowa.

Secretary Houston came into striking prominence in recent years through his investigation of the hookworm disease in the South, becoming an authority on that ailment. He has made a close and careful study of the agricultural situation, particularly in the South and Southwest, and because of his residence in the grain belt for the past five years is in close touch with farming conditions. He has been repeatedly honored by his associates with election to important positions on various organizations, testifying to his high standing and administrative ability. The department of agriculture has grown to such immense magnitude in the past decade that it demands a chief who possesses administrative ability fully as much as agricultural knowledge and Secretary Houston is believed to be the right man for the place. Being guardian of many millions of dollars annually it is incumbent upon the secretary of agriculture to see that this immense sum is expended judiciously, so that not only may farming be made more profitable, but that the absolute integrity of the department may be maintained. Secretary Houston's success in the institutions of North Carolina, Texas and Missouri is evidence that he possesses the ability to make good in the important position to which he has been called by the new president.

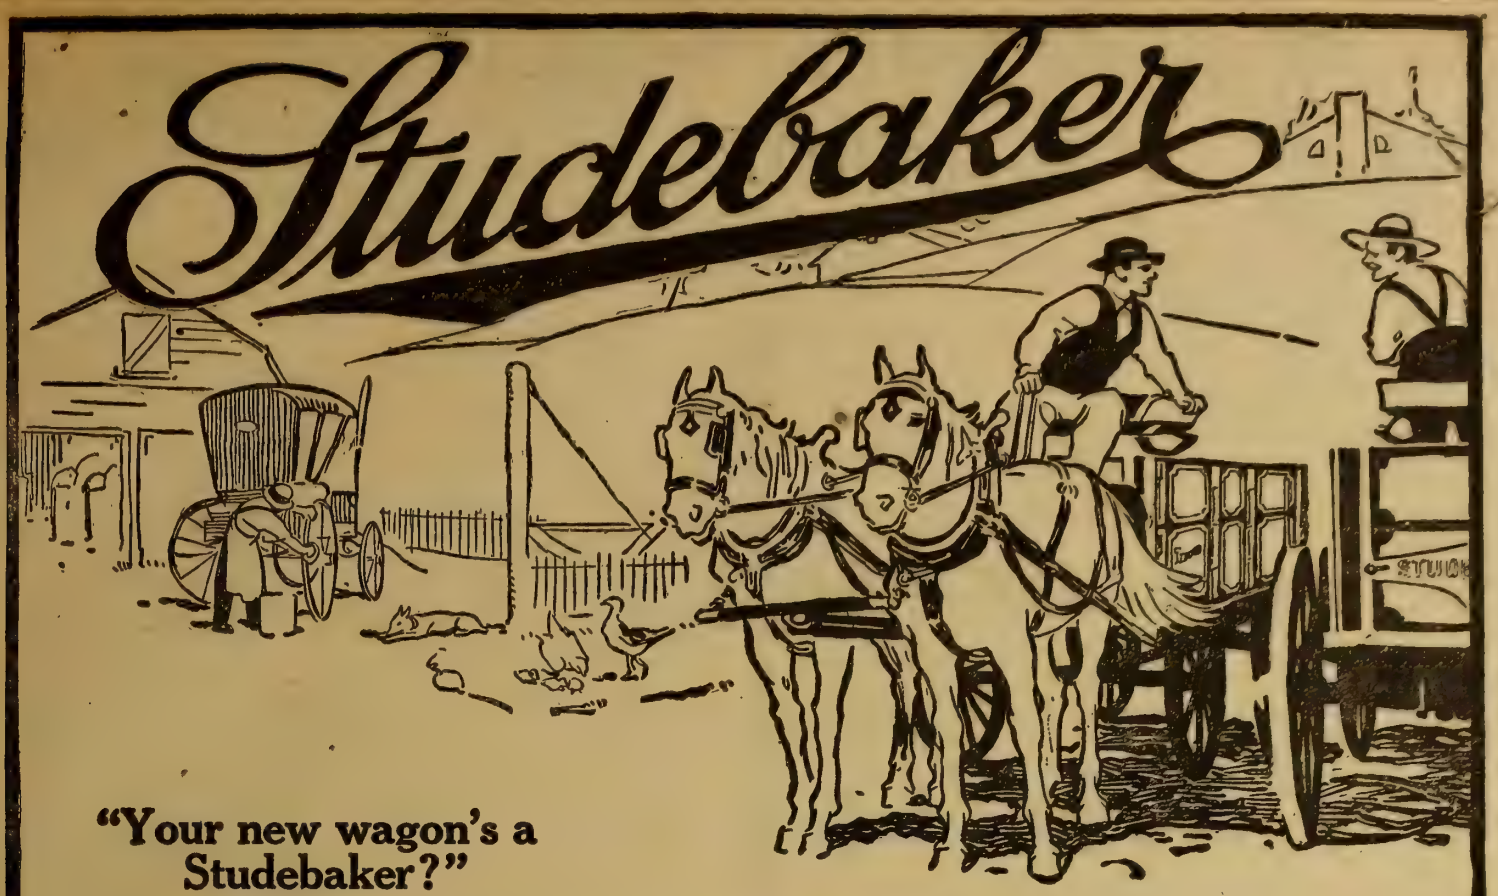


DAVID F. HOUSTON,
Secretary of Agriculture in President Wilson's Cabinet.

About the handiest tool a farmer can carry in his pocket is a jack knife with a harness punch blade. This and a six-inch plier will save miles of travel and days of time in the course of a season.

Those who have sharpened a lot of fence posts this winter with the intention of using them in their fences this coming summer will do well to pile them up as loosely as possible then try to forget about fence troubles until late in the fall or better still a whole year. A year of seasoning will mean years of life to the post.

Studebaker



"Your new wagon's a Studebaker?"

"Sure! I bought a Studebaker buggy, too."

"Well, there's no better made. I'm driving a Studebaker myself."

Confidence—the feeling that back of the mechanical excellence of the wagon and the buggy is the Studebaker name and reputation made this conversation possible.

For the man who buys a Studebaker wagon or buggy is always proud of it. He knows he has the ***best.***

And he also knows that the entire Studebaker organization will steadfastly uphold the guarantee that goes with the wagon and buggy.

For sixty years the Studebakers have enjoyed the confidence and good will of the farmer. Other wagon makers have come and gone, but Studebaker has kept right on making honest wagons and selling them at honest prices.

One standard of quality—the best—has made this possible. A wagon never leaves the Studebaker shops until it has been tested and retested to make sure it is up to this undeviating Studebaker requirement.

And the Studebaker standard is inflexible. Take the one item—wheels—hubs and spokes are stored for three years, inspected at every step of manufacture. Spokes turned from billets, cut with slope shoulders, so as to strengthen the shoulder, hubs treated with a sealing fluid which penetrates the wood and gives it a stubborn weather-resisting quality. Tires made—one for every wheel—not kept in stock sizes and forced on. Hub boxing made, so spokes can't ride on the boxing, spokes countersunk on felloe face so the load doesn't rest on the end of a single spoke. Little details, it is true, but attention to these details have made the Studebaker wagon what it is—the strongest, most dependable wagon made.

It is the absence of these little details that makes the cheap wagon possible, but the cheap wagon isn't a Studebaker, and it will neither give the service nor stand up to its work like a Studebaker.

The farmer who knows wagon values sticks close to the Studebaker dealer. He's a good man to know, for back of the Studebaker wagon is the reputation and integrity of the Studebaker organization.

Studebaker makes every kind of vehicle—for town or country, for business or pleasure. Farm wagons, contractors' wagons, trucks, delivery and business wagons, buggies, runabouts and surreys, and for every animal and every vehicle there's a Studebaker harness of the same high quality as the Studebaker wagons.

ONE MAN OUTFIT For 160 Acre Farms.

Do you farm 160 to 320 acres? Then look at this dandy little 25 brake horse power

HART-PARR OIL TRACTOR

hauling the new Hart-Parr-Sattley *SELF-LIFT* Plow. This is a strictly *One-Man Outfit*. So simple that you, alone, without any assistance, can run both the tractor and plow from the engine platform. A tractor and plow built especially for small farms. A tractor that affords you ample power at a price within your reach. A money maker and money saver at every turn. These features make it so:

Built almost entirely of steel. Rugged construction, yet light weight. Wave form driver lugs, the most efficient on soft soil. The power of 10 sturdy horses, with none of the fuss. Uses *CHEAPEST KEROSENE* at all loads. Engine is oil cooled.

Write today for special circular describing all the important features.

Hart-Parr Co.
228 Lawler St.
Charles City, Iowa

Original and Only Low-down Spreader.

Pulverizes. Never Clogs. 3-row Spread. Solid Bottom.

Light and Strong.

Spreads all Manures.

New Idea Manure Spreader

Not a mere *unloader*—does not dump in piles. The only spreader with double beaters and revolving distributing paddles, which cut the manure into shreds and spread it *evenly* over three full rows—5 to 7 feet. No choking. No bunching. Low-down. Easy to load. Tracks with standard wagon. Easy haul for double team. Solid bottom which never warps, breaks or wears out. No cog or bevel gears. Only perfect endless conveyor—cannot slip. All power direct from rear axle. Only two levers to operate. Strong metal wheels. Absolutely necessary for every grain and fruit farmer.

Write for New Catalog. Shows pictures and describes in detail. **New Idea Spreader Co., 144 Sycamore St., Coldwater, Ohio**

FARM FURROWS
TURNED BY A PRACTICAL FARMER

Corn shocks frozen down and coated with ice again glorify the silo and the use of silage for winter feeding. A man doesn't have to go after silage with a pick, a shovel and ax and a four-horse team.

The cow that is to bring a good calf this spring is almost worthy of a place in the parlor. I can remember when cows sold for no more than a veal calf brings now.

Ye who think that the horse is becoming a back number go into the market place and try to buy one.

Just because the papers are not being filled up with seed corn foolishness this spring is no reason for neglecting the seed corn. It is a good idea to test until you are sure you will be planting good seed, even if the ear test is not indulged in. Knowing that a seed ear plants one-tenth of an acre, however, ought to convince one that it is unprofitable to plant too many poor ears.

When drouth or other unfavorable conditions make potatoes small, it may be all right to use the small potatoes for seed, but to make a practice of using small potatoes for seed is, I am sure, not conducive to big potato crops.

With proper handling the hog is not only a mortgage lifter, but he is a mortgage preventive.

More folks would spray their orchards if they knew how quickly and easily the work can be done with modern sprayers, and how cheaply the correct spraying solutions can be mixed. With many, it would only be a matter of getting started.

Perhaps the garden fence needs looking after before the garden is worked up fresh, offering an inducement for Biddy and her flock to slip through and test the condition of the soil.

Sitting up all night with a farrowing sow is a lonesome job, but it frequently turns out to be a profitable loss of sleep.

Instead of fighting parcel post, many of the local merchants are using it. I notice by several local papers that many local merchants advertise to deliver free, by local parcel post, all goods coming under the parcel weight. First thing we know even those who fought it hardest will find they "cannot get along without it."

Make it a point to save some of the choicest ewe lambs for the improvement of your own flock.

If you cannot "fix" your automobile yourself better not let the brawny blacksmith tackle the job. Repairing an automobile calls for a knowledge of the steel used in the construction of the "critter," rather than in "main strength and awkwardness." Because a man has pounded iron does not signify that he would make a good hand at repairing an auto.

Do your farm work well today and tomorrow's work will take good care of itself.

The makers of farm machinery should now sell repairs direct to the users of their machinery, or, at least, mail repairs direct to farmers through dealers' orders. The parcel post will prove a great thing for delivering repairs directly to the farm, whereas, when coming by express, the farmer usually has to make a trip to town after the repair when it arrives.

Shape up now for some real hard licks that will count for something in farming.

We may expect spring rains to set in any time now. Those who profess to know in advance what the weather is to be promise us more rain than usual this spring. As to this I cannot say, but it is more than likely that a good-sized pile of bedding will come in handy for use in the cattle sheds and hog house, before the pasture season arrives.

Woven wire and clover or alfalfa pasture form the stronghold for hog raising.

A neat sign board in front of the house will save peddling your surplus products around town or among your neighbors.

Oats are not especially exhaustive on the soil; yield well; are very cheaply produced; and make an excellent ration for all stock on the farm. Plan now to raise a bumper crop of them this season, either mowing them early for roughage or binding and threshing them for grain, saving the straw for bedding and to help out as roughage in conjunction with better roughage.

There is one lesson that many of our farmers have yet to learn of the city man; that of advertising whatever he has on hand to sell.

Give careful attention to the planning of a truck patch. It will yield

The first successful **Upright Ear Corn Elevator made—SOLD DIRECT to the Farmer.** Free Catalog showing 8 styles with crib plans which save you money. Write for it today.

INTERLOCKING FENCE CO. BOX 65 MORTON, ILL.

you a neat profit in surplus products for the market; while the big end of your living will be produced here.

Take the time to improve the appearance of the yard this spring by scattering a generous sprinkling of blue-grass seed over it, together with some white clover, putting it on a little heavier where there are any thin spots. Later, when the ground is dry enough to work, rake the seed in with the garden rake.

Don't let the few dollars difference in the price of a really first-class farm tool and that of a poor one, tempt you into buying the one of low quality, as the superior service rendered by the better tool will more than overbalance the small difference in the first cost of these tools.

Make early preparations for raising your own sweet potato plants by looking up catalogs or having your local merchant order you the hotbed potatoes. They wil cost you but a few cents, and you can raise plants for yourself and supply your neighbors with enough to pay many times the cost of producing them.

The weather is hardly ever too cold for cleaning seed grain, but the treating for smut should be left until a short time before seeding. A hard freeze while the grain is wet would beliable to spoil the grain for seed.

Don't forget to do a little planning for the farm garden when planning the other farm work. The earlier the "garden sass" comes to our table the better it tastes.

FEEDING NURSING EWES.

To the Editor of The Homestead:

The importance of supplying nursing ewes a liberal ration is not as fully appreciated by sheepmen as it ought to be. I recently attended a farmers' institute and the question, "Which pays better, early or late lambs?" was being discussed by a gentleman who has spent practically a natural lifetime in the sheep business, having always maintained a large flock on his farm and fed hundreds of lambs for the market. He said that he did not think that the time the lambs were dropped had as much influence on the development of the lambs as the care which they received from the time of birth until placed upon the market.

It has been my experience that this is true, and most flock owners make a great mistake in not giving more attention to the feeding of their ewes during the nursing period. As soon as a ewe drops her lamb a heavy draft on her system begins that necessarily must be restored through a larger consumption of nutritious food. If this food is not supplied regularly to replace that which has been utilized for producing milk for the young, the time must come when the supply will become reduced, not only on quality, but quantity as well.

The future of the lamb crop is largely determined by the start each individual is given. No better evidences of this can be given than instances in the flock where the ewes are poor milk producers, and their progeny fails from the start to secure sufficient nourishment to supply the needs of its body. In every flock there are a few ewes that are inferior milk producers and unless they are carefully looked after and well fed they will fail to properly nurse their offspring during the nursing period. Ewes that are poor milk producers can be made, through good care, to nurse their progeny sufficiently to promote rapid development until the lambs are old enough to take supplementary nourishment.

There are also ewes in many flocks that are good milk producers for a few weeks after dropping their lambs, but gradually reduce their milk supply until the amount is much too small for the daily needs of their offspring. This condition of affairs in the flock materially influences the quality and uniformity of the lamb crop and reduces the profits in sheep husbandry.

Permitting the ewes to become badly reduced in flesh is a very poor practice and one that causes heavy losses. As the lamb begins to draft heavily upon its dam for daily nourishment, it is necessary to not only supply additional food to maintain a steady flow of milk, but also to preserve the flesh of the mother as well. It is very natural for a nursing dam to favor her offspring and consume sufficient food to not only maintain her own system, but also to supply the necessary amount to her young. Many ewes can be found in every flock that by naturally acquired habits, sacrifice their own body for the sake of their progeny. Pasture alone in early spring possesses insufficient nourishment to supply ewes to retain their flesh and at the same time supply their offspring. There must be some other means of meeting this demand. Ewes that drop twin lambs are more heavily drawn upon by their progeny than those that drop only one lamb. As a general thing, ewes that drop twin lambs are good milk producers naturally, and while they may be able to furnish a sufficient amount to promote a rapid growth in their progeny the first few weeks, the strain is generally too heavy and either the supply becomes reduced or the ewe breaks down. When it is desirable to rear two lambs to each ewe, attention must be directed toward supplying supplementary food as soon as they recover normal condition after lambing. As a rule, care must be exercised in feeding heavy milk-producing ewes. They are usually greedy feeders. I have had some trouble in overfeeding heavy milking ewes and, as a result, lost a lamb or impaired the milking system of the dam.

It is well to begin graining the ewes lightly at first, as soon as they recover normal conditions, and gradually increase the ration as the lambs grow older and the ewes become accustomed to the supplementary ration. Corn is not a good feed for milking ewes, as it tends strongly toward heating the system. I have found that a ration compounded from oats, peas, bran and oil meal makes a very excellent ration for milking ewes. This ration is very high in protein and extremely low in carbohydrates, and tends toward inducing a heavy flow of a high quality milk. I begin feeding very lightly on this ration at first and as the ewes become accustomed to the feed, I gradually increase the amount to what the ewes will readily consume. If the pasture is very succulent I find it an excellent practice to feed a little clover hay in the rack in the sheep barn during the spring months to counteract the laxative effect of the early grass. Shepherd.

One Thousand Dollars Cash Premiums

Will be paid to the farmers of Iowa by the **Home Mutual Hail Association, of Cherokee, Iowa,** in a free-for-all exhibit of the best ten ears of corn. We are vitally interested in this subject, and as a mutual association of the best farmers of this state, we feel it our duty to help and encourage each individual farmer. Premiums will be apportioned as follows:

NORTHERN ZONE		NORTH CENTRAL ZONE		SOUTH CENTRAL ZONE		SOUTHERN ZONE	
1st Premium	$50.00	1st Premium	$50.00	1st Premium	$50.00	1st Premium	$50.00
2d Premium	25.00	2d Premium	25.00	2d Premium	25.00	2d Premium	25.00
3d Premium	15.00	3d Premium	15.00	3d Premium	15.00	3d Premium	15.00
4th Premium	10.00	4th Premium	10.00	4th Premium	10.00	4th Premium	10.00
5 Premiums of $5.00 Each		5 Premiums of $5.00 Each		5 Premiums of $5.00 Each		5 Premiums of $5.00 Each	

Double Cash Premiums Will Be Paid

If you are now or become a member of the Home Mutual Hail Association, of Cherokee, Iowa, before July 15, 1913, then the premiums will be doubled, as follows:

NORTHERN ZONE

1st Premium $100.00 2d Premium $50.00 3d Premium $30.00 4th Premium $20.00
5 Premiums of $10.00 Each and like premiums in the North Central, South Central and Southern Zones.

RULES:—This contest is wide open to every farmer in Iowa. All corn to be sent by express or parcel post, charges prepaid, during the week commencing December 22, 1913, to the Iowa Corn and Small Grain Growers' Association, Ames, Iowa, who will judge the corn and award premiums, under the rules of membership.

For further information, before shipping corn, secure entry blank, premium list and shipping tag from the Iowa Corn and Small Grain Growers' Association, Ames, Iowa. Let each and every farmer try

FOR THE BEST TEN EARS OF IOWA CORN.

STARK TREES — Best For Over 100 Years

Four generations of fruit tree growing experience, boiled down, is ready for you absolutely free of charge. Don't experiment with fruit trees of unknown productiveness, uncertain quality. Stark Trees always pay big. The secret is in Stark Brothers' perfect method of growing, transplanting, packing and shipping.

50 Years Ahead of Any Other Nursery in America

Why don't you take advantage of our Special Service Department? All Advice Free to You. We send you free the best scientific methods of preparing your soil for biggest profits; show you how to prune your trees, give you best methods of Stark cultivation; how to spray the Stark way. We make your orchard a winner and a big money maker. Write us at once for Stark Year Book, complete fruit tree literature and statistics. Write today. 28

Remove One Nut and Share is Off

Off or on quick—that's the new feature. That's what you want. It's the biggest plow improvement in years.

When you see how it works you'll know the advantage of the

JOHN DEERE Q-D SHARE

For New Deere Sulkies and Gangs

"Q-D"—means quick detachable Also quick attachable. You take the share off by removing one nut. Put it back and fasten it by replacing and tightening nut.

And this one nut is in a handy place—just glance at above picture. Could anything be easier? It "stays put" too. Locking lug on landside holds share perfectly tight and rigid.

Our book, mailed free, tells all about this new improvement in plows. Write for free "Q-D" Book No. Q-D-27

John Deere Plow Co., Moline, Ill.

JOHN DEERE MOLINE, ILL. THE TRADE MARK OF QUALITY MADE FAMOUS BY GOOD IMPLEMENTS

CURRENT EVENTS

IN the presence of a vast concourse of enthusiastically cheering citizens, Woodrow Wilson, of New Jersey, was inaugurated president of the United States. The oath was administered by Chief Justice White, of the supreme court, following which the new president delivered an inaugural address, which for brilliancy and briefness is a classic. In many respects the address was comparable with documents issued on similar occasions by President Lincoln and earlier executives, who took the occasion to promulgate a set of principles rather than personal pledges or party planks. President Wilson made a plea for human rights and declared the change of government, which began two years ago when the house of representatives became democratic by a decisive majority, means that the nation has "been refreshed by a new insight into our own life." He was enthusiastically cheered when he added that "the scales of heedlessness have fallen from our eyes. We have made up our minds to square every process of our national life again with the standards we so proudly set up at the beginning and have always carried at our hearts. Our work is a work of restoration." The concluding sentences of the president's inaugural address stand without an equal in recent state documents, for their brilliancy and eloquence, and are as follows: "This is not a day of triumph; it is a day of dedication. Here muster, not the forces of party, but the forces of humanity. Men's hearts wait upon us; men's lives hang in the balance; men's hopes call upon us to say what we will do. Who shall live up to the great trust? Who dares fail to try? I summon all honest men, all patriotic, all forward-looking men, to my side. God helping me, I will not fail them, if they will but counsel and sustain me!" After having delivered his address, President Wilson and Vice-President Marshall (who had been sworn in a short time previously) reviewed the inaugural procession, which consumed five hours in passing the reviewing stand. The new president starts his administration under the most auspicious conditions and with the well wishes not only of friends, but of his recent political opponents. He called to his aid "all forward-looking men" and pledged himself to carry out progressive principles.

AFTER a career of uninterrupted public service beginning when he was twenty-one years old, William H. Taft has retired from public life. Immediately after the inauguration of President Wilson, President Taft left Washington for Augusta, Georgia, where he will be the guest of the city for three weeks, after which he will go to New Haven and take up his work as professor of international law at Yale University, at a salary of $5,000 a year. President Taft has held various offices, having served on the bench for a number of years, as governor of the Philippines and secretary of war, prior to his elevation to the presidency. He left the office with no bitterness in his heart, he confided to personal friends, but only with thankfulness that he had been given the opportunity to serve. He was given an ovation as he drove from the White House to the depot, testifying to the personal esteem in which he is held by his friends and neighbors in Washington.

PRESIDENT WILSON is understood to be antagonistic to the plan to permit American coastwise vessels to pass through the Panama canal free of toll and in this respect takes the position maintained by Great Britain, which has filed a formal note of protest with the state department. President Wilson will either lend his influence to securing a repeal of the law adopted by congress exempting this class of American vessels, or will unite with Great Britain in urging that the matter be settled by an international court of arbitration. This matter of Panama canal tolls is the only thing which has caused a serious difference of opinion between the United States and Great Britain in many years and it is sincerely to be hoped that it will be settled amicably to both nations, without any diminution of the friendly relations now existing.

CHAMP CLARK, of Missouri, will preside over the next house as speaker, the democratic caucus, held last week, continuing him in his high office. Representative Underwood, of Alabama, will remain as chairman of the house ways and means committee, which will bear the brunt of the work of revising the tariff downward. The democratic caucus was harmonious in the extreme and pledges were given that the party would remain united until the campaign pledges were fulfilled. Speaker Clark put an end to the rumors of a falling out between him and President Wilson by declaring: "It is a thing incredible that any man fit for official station would let his personal likes or dislikes interfere with his cooperating with any other democrat in unifying the party in its Herculean and multifarious tasks to redeem our pledges." The speaker was a candidate for the presidential nomination against Wilson, but has shown no visible evidences of ill feeling since his defeat.

ONE of the last acts of President Taft was to veto the bill recently passed by congress prohibiting the interstate shipment of intoxicating liquors into prohibition states, in conflict with the laws of those states. President Taft gave as his reason the belief that such law was unconstitutional. Congress apparently did not share this opinion, as both houses passed the bill over the president's veto by an overwhelming majority, so that it becomes a law regardless of the presidental disapproval. The bill does not prohibit the interstate shipment of intoxicating liquors intended for personal use, but does prohibit their shipment where they are intended for illegal

Imperial

Test the Value of This Car
by Close Comparison

Imperial "44"—50 H. P.—$1875

Experienced automobile buyers have learned that a car that measures up to the highest possible standard of quality is invariably the most economical and satisfactory purchase in the long run.

The real problem which any intending buyer has to solve is to obtain this quality at the lowest possible price.

The car which perfectly meets both these demands, unquestionably offers the absolute maximum of value.

It is a significant fact that the majority of Imperial owners have learned to appreciate the unparalleled value which the car offers, through critical and thorough comparison with other cars.

A careful comparison of Imperial cars, feature by feature, with other leading makes priced at $1500 to $2000 *more*, will furnish a welcome revelation to you. The time spent in making such a test will repay you a hundred fold. Through this means, men who previously believed that their requirements could not be satisfied in a car costing less than $3000, have found that the Imperial more than fulfils their highest expectations besides saving them from $1000 to $2000 on first cost alone.

For instance, the Imperial "44" at $1875 offers an opportunity to purchase a five passenger, fifty horse power touring car, whose superb beauty and comfort render it distinctive at first glance among the highest priced cars on the market. Motor 4¾-inch bore, 5½-inch stroke, 122-inch wheel base, 36x4-inch tires: Every modern refinement of proven value including a positive Electric Starting and Lighting system and center control levers. Equipment—Genuine silk mohair top, dust hood, windshield, speedometer, tool kit, repair kit, demountable rim jack, pump, hub cap wrench, tire irons, spare rims, mountings black and nickel.

Complete..... $1875

Electrically Started and Lighted

IMPERIAL "44"

use. It will thus strike a blow not only at bootlegging, but at the practice of clubs furnishing liquor to their members. The bill was championed most ardently by Senator Kenyon, of Iowa, and had the endorsement of William J. Bryan, who strongly urged democrats to pass the bill over the president's veto.

THE grain belt has two representatives in President Wilson's cabinet: William J. Bryan, of Nebraska, secretary of state, and David A. Houston, of Missouri, secretary of agriculture. The other members of the new cabinet are as follows: Secretary of treasury, William G. McAdoo, of New York; secretary of war, Lindley M. Garrison, of New Jersey; attorney-general, James McReynolds, of Tennessee; postmaster-general, Representative Albert Burleson, of Texas; secretary of navy, Josephus Daniels, of North Carolina; secretary of interior, Franklin K. Lane, of California; secretary of commerce, Representative William C. Redfield, of New York, and secretary of labor, Representative William B. Wilson, of Pennsylvania. President Wilson's cabinet will consist of ten members, whereas President Taft's consisted of only nine, the office of secretary of labor having been recently created by congress, the bill being signed by President Taft only a few hours before he retired from office. The new cabinet finds the various sections of the country well represented, New England being practically the only one without a member. Secretary Bryan, who becomes the premier of the cabinet, will inherit a number of important matters which will come up for early determination, among them being the question of intervention in Mexico or the recognition of the Huerta government and the question of Panama canal tolls, raised by Great Britain. Because of his extensive personal acquaintance, his experience in practical politics and his widespread knowledge of foreign affairs, owing to his world tours, it is confidently expected that Secretary Bryan will make an admirable premier.

THE congress which convenes on April 1st, at the call of President Wilson, to revise the tariff, will find a number of formerly prominent members of both houses conspicuous by their absence. Particularly will the passing of "Uncle Joe" Cannon, of Illinois, attract attention, not only because of the length of his service, but because of his picturesque personality. Speaker Cannon was retired to private life by the edict of the voters of his district last November. He will be accompanied to private life by Congressman Nicholas Longworth, son-in-law of Theodore Roosevelt, and by a number of prominent members of the senate, conspicuous among them being Senator Norris, of Montana, campaign manager of Colonel Roosevelt in the last campaign; and Senator Bourne, of Oregon, father of the parcel post; and Senator Crane, of Massachusetts, one of the prominent reactionaries. The term of Sen. Shelby M. Cullom, of Illinois, likewise has expired, but Senator Cullom has been appointed resident manager of the $2,000,000 Lincoln memorial to be erected in Washington, so that he does not retire completely to private life. The forthcoming congress will find many new faces in both houses, while the supremacy long held by the republicans will give way to the supremacy, for the next two years at least, of the democrats.

FOR the second time in the last sixteen years a president has vetoed an immigration bill which would have refused admittance to foreigners unable to read or write their own language. No sooner had President Taft's veto been received by congress than an effort was made to pass the bill over his veto, the house mustering the necessary two-thirds vote, but the senate failing by five. The immigration bill was heartily endorsed by the leading union labor leaders of the country, who maintain that cheap foreign labor is competing with American labor to the detriment of the latter. President Taft held, however, that it is unfair to deny admittance to the down-trodden of foreign countries, who, because of oppression there, have been unable to secure the educational advantages which they seek in this country. He maintained, moreover, that illiteracy is not necessarily an indication of citizenship that is undesirable. President Taft thus aligned himself with President Cleveland in refusing to put up the bars against foreign immigrants because of illiteracy. It is considered highly probable that an effort will be made to pass the same, or a similar, bill through the present democratic congress, as President Wilson (judging from his books) is known to be in favor of restricting immigration.

The mere enactment of law prohibiting the sale of impure seeds never has and never will prevent the indifferent or mercenary dealers from selling seeds badly adulterated and of low germination power. It requires rigid inspection and persistent campaigning to convince the buyer and seller alike of the enormous waste and loss which results from the sowing or planting of impure seeds and those of low vitality.

Already, according to competent authority, sixteen states have enacted seed laws and of these at least four have laws which for one reason or another are not capable of accomplishing good results. And as would be expected in a number of the other states, owing to inadequate inspection and insufficient campaigning far too much of the seed sold and sown is not as pure or vital as it should be. Due to the work done by Professors R. A. Moore and A. L. Stone, of the Wisconsin College of Agriculture, the dealers of Wisconsin are endeavoring to supply their patrons with superior seeds. Never a planting or sowing season returns unless the state seed inspectors are swamped with requests to inspect seeds.

"This," observes the Brookfield (Mo.) Gazette, "is the season of the year when the early bird catches the chilblains."

Wipe off the Walls and they're new again

Here is the richest and most attractive of all wall coverings—the most sensible and economical, too. No matter how many finger-marks may get on your walls—no matter how smoky your ceilings get in winter—they will wash off bright as new if covered with

Lu-co-Flat

Better Than Wall Paper and Calcimine

A soft, velvety finish. Cheery and restful. Not affected by steam or moisture. Lasts for years.

LUMBER ECONOMY SERIES—NO. 2

2 THINGS IT WOULD BE WELL TO "CUT OUT:"

1st—Cut out the REPAIR BILLS on your improvements—all over the place—or at least reduce their heft and frequency. It's the Repair Bills due to rotten wood that eat up more farm dividends than 17-year locusts ever did — because they come around so much oftener. And in doing repair jobs already necessary—IS IT REALLY GOOD SENSE TO REPLACE ROTTEN WOOD WITH WOOD THAT WILL ROT RIGHT OVER AGAIN—WHEN YOU CAN GET

CYPRESS

the "Wood Eternal" of Biblical history at any good lumber yard? If your nearest yard don't carry it, DO SOME INSISTING — and write us the facts promptly. We will see that you *can* get it.

2nd—Cut Out the Coupon below, fill it up and send it on its way—all for the sake of your bank account—because

CYPRESS

is the only wood on earth that *permanently resists all rot-influences.*

CUT OUT REPAIR BILLS BY USING CYPRESS "THE WOOD ETERNAL"

YOU KNOW WHAT A CAREFUL OLD PARTY YOUR UNCLE SAM IS when he renders his official reports. Well, here's just a taste of what he found out about Cypress lumber when he put on his specs to get the real facts about the wonderful "Wood Eternal:"

READ THIS—IT'S FROM GOV'T BUL. 95.

(Dept. Agriculture, Forest Service, June, 1911)

"FARM LUMBER"

"Much cypress lumber is employed in the construction of silos. . . . . THE FARMER puts the wood to many uses, in all of which it gives good service. Its LASTING PROPERTIES fit it well for Curbs, when material is needed that RESISTS DECAY. Watering Troughs for farm stock and Feed Troughs for Sheds and Barns are made of it; likewise troughs or Flumes for conveying water from wells or springs. RESISTANCE TO DECAY fits it for Stable Floors and timbers near the ground, as well as for Fences, Gates, and especially for Fence Posts and telephone poles. It is one of the best available woods, because it shows paint well and holds it for many years, but lasts a long time without it. . . .One of the widest uses of cypress is in Greenhouse construction. It is *pre-eminently fitted for that trying place*, where it is called upon to resist dampness, excessive heat, and all the elements that hasten decay." . . . "In some southern cities heavy cypress planks are used for street curbing. AGRICULTURAL IMPLEMENT and Machinery Manufacturers make Seed Boxes of it, wagon makers employ it for Beds, and carriage and auto builders work it into panels for fine bodies. *Its* SLIGHT *tendency to warp* has caused its employment by builders of incubators." "AS SIDING it practically wears out before it decays. When made into PORCH COLUMNS it RETAINS ITS SHAPE, HOLDS PAINT, and has sufficient strength. . . .It is placed as cornice, gutter, outside blinds, pilasters, and railing, and is much used for porch floors and steps." "THE PROPERTIES WHICH FIT IT FOR SUCH WIDE USE are the FREEDOM of the wood from KNOTS AND OTHER DEFECTS . . . . AND THE LONG PERIOD WHICH THE WOOD MAY BE EXPECTED TO LAST." (Also the great EASE WITH WHICH IT IS WORKED with tools.)

THE CYPRESS POCKET LIBRARY (36 VOLS.) tells all—contains dozens of FREE PLANS for Houses, Barns, etc.—recommends cypress lumber ONLY WHERE IT IS THE ONE BEST WOOD for the purpose—and is sent without charge to wide awake farmers the country over.

JOHN DEERE PLOW CO.
MOLINE, ILLINOIS

That Necessary Inch

Like a pole that doesn't quite reach; a rope that is a bit too short; a bar rail that continually drops out of the post, the fertility in ordinary soil lacks the necessary small amount of available fertility for a bumper crop. There is enough fertility of a kind in the soil for many years; but it is unavailable. Only enough becomes available each year to produce small, unprofitable yields; and when all other conditions are right for a large yield the crop fails for lack of **available** fertility. Available fertility is the kind provided in the

EMPIRE FERTILIZERS

These fertilizers supply to growing crops in available form the plant food elements required which in connection with good seed, cultivation and weather and the plant food supplied by the soil and air, are producing good crops of profitable size and quality. Farmers depend upon them as upon other old friends, and have done so for years.

HORTICULTURE

ORCHARD MANAGEMENT.

To the Editor of The Homestead:

Every farm should have its own orchard. This should be large enough and of sufficiently well-chosen varieties to supply the family needs the entire year. It is desirable, too, that the varieties be of the best that can be obtained for the peculiarities of each farm as well as the likes of the users of the fruit.

Much is to be considered in locating an orchard. It is desirable that the orchard be near the dwelling. Of course, school, rural route and town conveniences weigh heavily in locating the dwelling and it is best to have these three features chosen correctly as they are permanent. If these compel the location of the dwelling so as to cause an unfavorable location for the orchard it may be well to have the orchard some distance from the house. Windbreaks can be grown of catalpa, cottonwood or some other valuable tree if necessary. Points unprotected from the heavy winds which come when the apples are large and nearly ripe should be avoided if possible. The land should be well drained and free from hardpan or alkali. A southern slope is good for coloring the fruit, while a northern slope is more protected from winds. In the latter case the trees will not be so forward in the spring and thus the late frosts have less chance of injuring the premature budding of the trees. However, fruit raised on a decidedly northern slope is less highly colored, has a poorer flavor and is not quite so salable.

Every farmer cannot be an expert orchardist, but every farmer can learn enough about it to raise an abundance of fruit for his own use. The amount of fruit that an acre of ground will produce when properly cared for will surprise those not accustomed to it, while a dozen well-chosen apple trees will often produce more fruit than a large family can consume in an entire year if proper methods of canning, drying and preserving are used while the apples are ripening. The land cannot be too well prepared. The ground should be deeply plowed in the fall and thoroughly pulverized.

Your success depends very much upon the varieties chosen. An apple that is a leader in some states or even counties may be at the end of the list in an adjoining county. Select therefore the trees that you know are a success or do the best in your own particular locality, regarding any deviation from that as an experiment only. Always insist on getting good stock. This does not call for the largest, but should consist of strong, healthy, unbruised plants of fair size for their age with good roots. These trees should be typical of the variety. It is not economy to purchase low-grade stock simply because it costs less.

Best results follow spring setting. It should be borne in mind that taking up and resetting a tree is a critical time with the tree and nothing should be left undone that will promote the chance of the tree growing. In taking up many of the roots are broken or cut off and in order to do well the top should be cut back to correspond with the root loss. Broken, bruised or badly injured roots should be cut back to healthy wood. Cut off the root with a smooth, slanting cut on the bottom side. Dig a large hole so that all the roots can lie in their natural position and set about two inches deeper than the trees were before being taken up. Carefully fill in between the roots with mellow dirt, allowing no rubbish or manure to enter the hole. Press this dirt firmly about the roots being careful to set the tree straight and not bruise it. Apple trees do best when set at least thirty feet apart each way. Trees one year old grow better and are cheaper as well as being the most satisfactory to set and tend.

The young orchard should be given every possible chance to grow rapidly. The conditions that are favorable to growing corn are as good as can be devised for young apple trees. If corn is planted in a young orchard care should be taken to keep the rows far enough away from the trees so that the growing corn will not injure the trees or so that the trees will not be debarked by the singletrees of the tools used in cultivation. A young orchard should never be set in sod. The best of soil and cultivation are none too good for a crop from which we wish to gather crops of delicious fruits for a score of years.

Danger of injury from mice and rabbits should not be overlooked. Wrapping with cornstalks is very good and costs but little. Mulch and manure should not be allowed close to the trunks of the trees as mice will nest there and girdle the trees near the ground, which is ruinous.

In pruning the tree have your object

Genuine—Unadulterated

No matter how **valuable** your land. No matter how much you **weed, hoe** and **dig.** No matter how much the sun shines or how much it rains, nor how much you irrigate your land; **and all these things represent money.** Your efforts are all in vain and the money lost if you get cheap seed. Why take a chance even if you get your seed for nothing, on stale, low-germination test inferior seed when you can get **Pure—Genuine—Unadulterated** seed from us? We sell only one quality—no second or third grades.

50c Collection Only 10c

All packed in big envelope which is good as part payment on future orders. Good for 25c on orders of $1.00 or more. clearly in mind. The form of the tree is important. Avoid crotches to split when the tree is heavily laden with fruit. The tree must be strong to bear its burden and the branches spread sufficiently so as to admit light and color and flavor the fruit. No two branches should emanate from the same place on the tree. This is sometimes hard to secure, but keep your trees as nearly right as possible. In removing branches use care to make smooth wounds. Leave no ragged traces of careless methods. All dead branches should be removed and the tree left as well balanced as possible.

The question of fertilization needs much emphasis. The production of heavy crops of fruit draw heavily upon the fertility of the soil and unless something is done to maintain this fertility soil exhaustion is sure to follow, resulting in unproductive orchards. For this nothing is better than fresh wood ashes with well-rotted stable or barnyard manure second in value. If these are not to be had crops of clover allowed to grow to full size and plowed under is very good. If none of the legumes can be used rye, buckwheat and rape do quite well.

Tillage is the fundamental factor in progressive orchard management. The offices of tillage are many. Among the most important are: The setting free of the plant food; the ground is made finer for the penetration of the roots, and the soil is kept in condition to absorb rainfall more quickly and completely as well as to retain the moisture. Injudicious cultivation when the soil is too wet will do more harm than good and the best of cultivation cannot bring back the former condition during the whole summer. Such mistakes are costly and much care should be used not to cultivate the orchard when too wet.

James Wiltse.

THE ANNUAL FLOWERS.

Very much disappointment is experienced in trying to grow plants of the various flowers, which are such desirable ornaments to the summer garden. The common errors of management which lead to failure are planting the seed too early—when the ground is cold—and planting too deeply so that the delicate plants cannot emerge from the soil— and failure to maintain the right degree of moisture so that the seeds can germinate.

It usually takes some unfortunate experience to impress these facts upon the minds of would be florists. A good general rule to observe is this —cover all seeds only about twice the diameter of the seed used. There is also much to be considered about the kind of soil used. The tender shoots will force their way through a covering of fine sand twice as thick, as though the covering were of clay or loam, which inclines to pack. And again success in starting plants depends very much upon striking the proper time to plant.

We must remember the universal rule that heat and moisture are the two conditions which start growth. You may have sufficient moisture, but if the weather is cold the seed will rot and not grow. On the other hand, you may have a warm soil, but if there is a lack of moisture the seed will dry out. It should be noted that in dry seasons the covering of new planted, delicate seeds may be heavier than when there is an abundance of moisture, but the best way is to supply the moisture yourself, from a sprinkling pot, when nature is deficient or untimely in her supply.

Those flowers which have large seeds like sweet peas, nasturtiums, etc., make but little trouble for they may be planted so deeply that germination is secured before the soil has time to dry out. They are among the rough and ready plants, which stand much earlier planting than the most of garden favorities. When we come to growing salvia, coxcomb, pansies, asters, etc., we must exercise more care and patience. If seeds are to be sown in the open never begin operations until the ground is thoroughly warm.

And then if plants are to remain where the seed is sown use extra care to conserve moisture. It is understood that the ground must be thoroughly prepared, pulverized until no lumps are left. Rake it smooth and level. Now scatter the seed carefully and sprinkle over the bed a little fine sand. Now with a wide board press down the soil firmly. Then sprinkle lightly and place over the bed a thin shade. This may be a cotton cloth laid upon the ground, or it may be tacked to a frame, but if the hot sun of the first of May is upon you the shade is needed. And the sprinkling will be called for every evening. It takes some seed longer to germinate than others. So the grower must not be discouraged, if some come a few days in advance of others, but patiently maintain the required conditions of moisture and you will be rewarded in due time. If the plants come thickly you will need to thin out before a good healthy growth can be secured.

Reset the plants which you remove about an inch apart each way. Do this at evening, and shade with a cloth for a day or two, giving plenty of water and they will at once start into a vigorous growth.

This system of plant growing will give you plants at the usual time and flowers at the usual time, but there is a way by which you may get bloom a month earlier and that is by starting the plants with artificial heat. This may be secured by a hotbed or by using a south window in sitting room or kitchen. Whichever plan you adopt it is best to sow the seed in "flats." The flat is a shallow box of size convenient for

Is Your Home Sheltered?

Save dollars by saving heat. A wind-swept home is a cold home. Shivering cattle take on no fat. Cold hogs make the smallest gains. Wind-tossed chickens lay no eggs. Protected gardens get the earliest start.

259 Bushels per Acre
Yes, Sir! With
SALZER'S
Rejuvenated White Bonanza Oats

That is the record, actually produced by Mr. Theo. Harmes of Lewis County, Washington. The facts are verified and proved. Salzer's Rejuvenated Oats are the greatest oats ever put into the ground. Have stood at the top for more than twenty years. Won $500.00 in gold open to the world for the heaviest yielding oats. We have rejuvenated this oat and the result is an oat stronger in straw, healthier, larger, plumper, meatier kernels, yielding from 20 to 50 bushels per acre more than the old White Bonanza Oats. There is no finer, plumper, handsomer oat grown in the United States. This is the oats that every grower should plant in 1913. Write today for prices and special premium offer.

Salzer's Seed Corn

Golden Glow (Wisconsin No. 12)
Silver King (Wisconsin No. 7)

You cannot go wrong on either of these. Silver King is the corn that has made Wisconsin first in yield per acre west of Ohio. Golden Glow has yielded over 100 bushels per acre. This is corn with a pedigree. We select our seed corn with the greatest care, and every ear is tested for fertility.

Salzer's Alfalfa

Three times the feeding value of Red Clover and Timothy. Hardy. A big, quick, continuous money-maker. Pure seed. Let us quote you prices. Salzer is IT in this country on Alfalfa. Keep that fact in mind.

Salzer's Potatoes

We are headquarters for seed for the great potato growers in the Northwest. Our earliest varieties and later sorts are veritable bonanzas as money producers. Change your seed stock this year while potato prices are low.

10 Big Sample Packages 10c

For ten cents we gladly mail one package each new $1,000 prize Marquois Wheat, Twentieth Century Alfalfa, Rejuvenated Bonanza Oats, Silver King Barley and other farm seed packages, together with our great seed book.

We sell direct, cut out all useless profits, give you lowest prices and add valuable premiums free on purchases of 50 cents and upwards. Look over our Premium List. See what you can get free for the farm, home and kitchen. Our catalog for 1913 is a big, handsome book—just what you need for reliable information, choicest seeds and lowest prices.

Big Money in Oats
AND HOW TO GROW THEM

I want every reader of this paper to write me for my new book, "Big Money in Oats and How to Grow Them." Just mail me a postal or a letter giving me your name and address and I will send you this valuable book together with a free sample of our pure Canadian Grown Regenerated Swedish Select Seed Oats. This book was written by Wm. Galloway, Professor M. L. Bowman and other seed experts. It contains priceless information worth real money about how to make big money in oats, how to make a seed bed, how to start a seed patch, how to make oats stand on rich ground and how to grow a bumper crop of oats. It is profusely illustrated by photos taken from actual life and contains, besides, facts, figures and opinions given by farmers all over the country. Now, remember, this book is **free** for the asking and we will send it to you together with a free sample of the oats or, better still, enclose 10c to cover packing and postage, and we will send you an extra big sample packet, or for 25c we will send you a triple size and for 50c a packet three times the size of the 25c packet. In addition to this, after you have had a chance to examine the sample oats, if they suit you, as I know they will, you can return the empty packets to us and we will accept them the same as cash in part payment on any future orders you may send in. Can you beat this offer? Never.

Feed Your Old Oats to the Hogs

Better feed your old oats to hogs or the horses, or sell them. You can afford to do it when you stop to figure up the net results between our seed and ordinary seed. For instance, which is cheaper—Genuine Imported Regenerated Swedish Select Seed Oats that germinate nearly 100 per cent—every oat sprouting—Fresh, Hardy, Full of Life and Vitality—or oats that are half hulls full of weaklings, that plainly prove they are inferior and run out? Our thoroughbred Imported Canadian oats cost a little more than common seed at the start, but if you pay twice the price and receive common seed for nothing, our oats would be cheaper and bring in the most profit. It's net results that count. Here's the proof.

J. E. Andrews, Dassel, Minn., writes: "Yielded 105 bu. to acre." Oscar Kling, Alamose, Colo., writes: "Yielded 141 bu. to acre." H. Hendrick, Roanoke, Ill., writes: "Got 95 bu. from one acre." A. J. Barber, Clinton, N. Y., writes: "Galloway, you are right. Last spring I bought some seed oats of you Just threshed. Yielded 80 bu. per acre."

Write For New Free Oats Book

We'll tell you how to put your oats growing back on a money making basis—Discard your old in-bred seed oats and start your crop this year with our Regenerated Swedish Select Seed Oats. They'll make you big money.

You can raise 75 to 140 bushels to the acre with our seed. Imported direct from Canada. Extra fine. Send for free sample. It speaks for itself. Our customers who bought from us last year raised from 75 to 140 bushels to the acre against one-eighth to one-half as much from their old seed, which proves our statement that farmers need a change of seed oats in this country.

We specialize on extra fine Seed Oats on our big Canadian Farm—new, clean land—and grow the Genuine Regenerated Swedish Select Oats which have broken all records. Specially bred to suit climatic conditions in the U. S. Matures from 12 to 15 days earlier than other kinds. Extra large white berry. Thin husk. Stiff straw. Tremendous yielder. Rich in protein, and just the oat you have been looking for.

Why not start a seed patch on your farm this year? It has paid others big. It will pay you. Write us early. The demand for our seed is tremendous. Last year we had to return orders we could not fill. Write early. Demand tremendous. Supply limited.

More Corn—Better Corn

You can have the benefits of better planting and vastly better crops with the **Hayes** Four-Wheel. Every kernel planted *exactly the same depth*—every hill in *perfect* check—an even stand—*surer* germination and *quicker* growth—no missing hills, *no bare spots* in your fields; such conditions will mean *more* corn for you, *better corn, more money.*

This planter is *guaranteed.* It *must* be all we claim and all you expect. 160,000 users verify that **Hayes** Four-Wheels regulate depth of planting to the *fraction of an inch.* Corn all comes up at the same time, allows earlier cultivation, an earlier harvest, a *better quality* and *bigger quantity.*

Hayes Four-Wheels guarantee *surer germination* and *quicker growth.* Wheels pack the dirt around the corn to hold the moisture and leave a *ridge of loose soil* on top. Ridge over corn prevents washouts in hilly fields and gives greater surface for sun's heat.

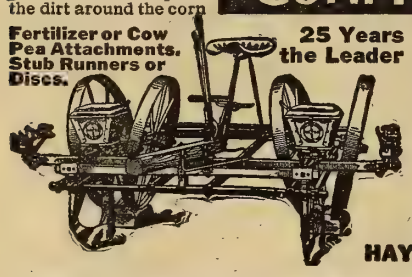
Covers where all ordinary open wheels fail—even in wet and sticky ground. Guaranteed not to clog. Short coupled, light draft and turns in shortest space. *Checks with absolute accuracy,* regardless of team's speed. Cross rows straighter than the way you drive.

The **Hayes** Drop *never misses a hill.* Simple, reliable and most efficient. Fewer parts, less breakage, and delays. Has no clutch to miss and give trouble. *Never cracks or grinds the seed.* Will drop accurately any size or shape kernel. *No bare spots* in **Hayes** planted fields. No replanting necessary. Increased yields soon pay for it.

Hayes Four Wheel Corn Planter

Fertilizer or Cow Pea Attachments. Stub Runners or Discs.

25 Years the Leader



Thousands in use for years with practically no repair expense and every one giving *time-saving, money-making* service. No complicated parts to get out of fix. Strong construction *practically exempt from breakage.* No expensive and aggravating delays in the busy planting season. Easy and simple to operate and can be trusted to unskilled help.

1,500 dealers. Ask your dealer or let us prove how this planter prevents corn field waste and increases corn yields. Don't make a mistake. Buy the planter that *guarantees* results.

Free book "P" of Planter Facts tells all about the **Hayes.** Write for it today—a postal, or if you wish a letter, asking any questions on planting problems.

Thresh Your Grain with an Avery and Save It

There is just one way to **absolutely prove** what a separator will do in saving the grain and that is to make a field test. We wanted to be able to prove definitely what an Avery "Yellow-Fellow" Separator will do in grain saving, and so for three years we made field tests in different states. 27 tests were made. The average saving in the 27 tests was **99 9-10 per cent.**

Think of it! 27 **actual field tests** and an **average saving of 99 9-10 per cent—practically perfect.** That's the wonderful grain saving record made by Avery "Yellow-Fellow" Separators. **By far the best proven grain saving record ever made** by any make of separator. An Avery puts the grain in the wagon and not in the stack.

Avery Separators also do **good cleaning, thresh fast, and run steady.** Breakdowns with idle crews lying around at big expense are practically unknown with an Avery "Yellow-Fellow." Teeth are tool steel and **guaranteed for life against breakage.** An Avery gets there and gets away.

Box 505 Osage, Iowa

handling. It may be one foot by eighteen inches with sides three inches high. Or you may use cigar boxes. Put into these two inches of well-prepared soil. This should be a mixture of sand, garden earth and well-rotted manure one-third of each. After sowing seed press down and cover as before.

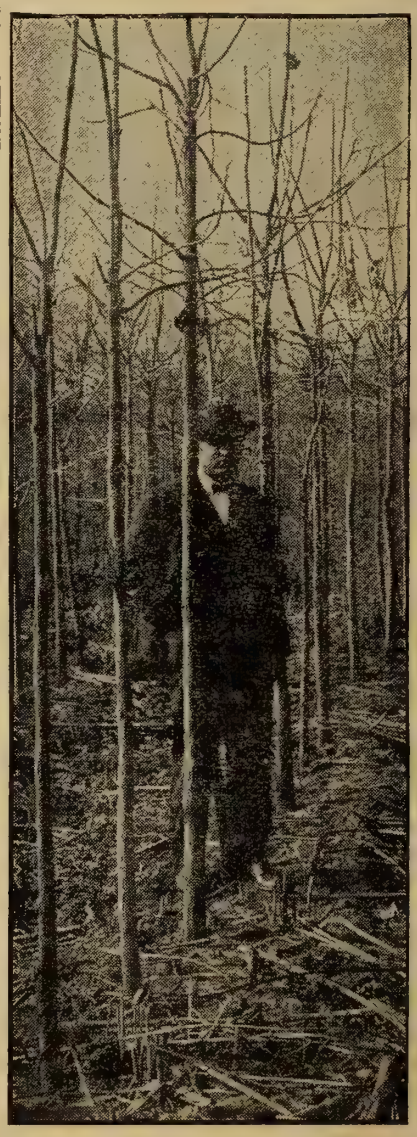
Shade as in the first case. Watch carefully to see that just the right conditions of heat and moisture are maintained. If too hot give more shade and if too dry more moisture. If these rules are observed you may grow an abundance of good, strong plants, enough for your own garden and some for your friends. Try it and see how satisfactory to grow your own and good ones.

POSSIBILITIES IN SPECIOSA CATALPA FARMING.

To the Editor of The Homestead:

On account of the confusing of the common scrub catalpa with Speciosa, the big timber variety of catalpa, farmers of the middle West have overlooked a rich opportunity just beneath their feet in Speciosa catalpa farming. It is largely the far-sighted and shrewd business man who has already investigated this field and is now buying up suitable land to go into this industry.

The Speciosa catalpa is a native of America and until 1818 was not known to exist anywhere in the world except in a restricted portion in the river valleys of Indiana, Ohio and adjoining states. Its high value as



timber, and its ornamental flowers, attracted the attention of early settlers and it was soon distributed to all parts of the country. The first settlers found the Indians using the catalpa in canoe building. The light weight of the wood, strength, durability and lasting qualities, appealed to them. Whether in water or mud, or exposed to the sun, they found it proof against checking and cracking.

Early in the nineteenth century General William Henry Harrison, later president of the United States, called attention to the catalpa as a useful and valuable tree for artificial planting. Dr. John Warder, a former president of the U. S. Horticultural Society, also investigated its growth and habits, and was first to make it clear that there was more than one type of catalpa and that the Speciosa was a distinct variety of much value.

The demand for wood will always exist. The use of building materials is increasing with our population and nothing yet invented or discovered can supplant wood as a building material.

Railroads are being pushed into every corner of our land, and an ever-enlarging network of interurban electric lines is connecting our towns and cities. Ties and poles must be obtained from somewhere not only for the first construction of these steel highways but also for the upkeep afterward. As our population grows, farms are being cut up and new homes established. The open range is almost a thing of the past. Where there was one mile of fence fifteen years ago, ten miles are needed now.

In artificial tree culture lies the only hope of relief from a threatening timber famine. The ease with which a grove of trees may be planted and maintained and the returns it insures, commends forest farming to the enterprising farm owner. He considers his grove of timber trees of as much or greater importance than his orchard, garden or potato patch. One planting and a little care is all that is needed in a lifetime but the crop is always ready for harvest after five to eight years' growth. He

A valuable Free Book on CLOVER

A gold mine of information

We have just published a wonderful new book entitled "Clover, the Great $Cash Money Crop$." This book is truly a most remarkable source of information on the subject of clover raising. For the first time the opinions and experiences of the world's greatest clover authorities and practical growers have been gathered together in printed form. Every question you can think of is fully answered. It tells you how to get a sure "catch" first planting; how to keep clover in the rotation; about clover as a soil enricher; how to handle the crop for hay and seed production; how to grow clover that makes richer feed—that produces more beef and more milk—that puts immediate cash money in your pocket. It explains the cause of clover failures; how to avoid winter killing; how to prevent ground heaving; how to guard against the loss from heat and drought; it tells all about the causes of "clover sickness" and how to deal with it. These and hundreds of other questions are answered, covering sixteen clover varieties, including Red, Mammoth, Crimson, Alsike, Sweet, White, Yellow, Japan, Berseen, Burr, Serradilla, etc.

This book is a gold mine of information to the farmer who is looking for bigger and better results. Ordinarily this book is sold for 35 cents per copy, but for a short time we will mail a free copy, postage prepaid, to the readers of this paper, or until a certain number have been distributed. If you will write at once you will be sure of getting a copy by return mail.

P. O. KELLER MFG. CO., Waterloo, Iowa
Send for our FREE booklet, "3 Ways to Plant Corn"

needs not replant every year and crop failure is unknown.

The first great essential in forest farming is to select the right tree. It must be adaptable to the demands made upon it, quick maturing, easily grown, the wood durable, resistant to insects and weathering, and easily wrought. The tree that meets these requirements far better than any other is the Speciosa or hardy catalpa. It is unanimously recommended by unbiased authorities such as the officials of the U. S. Department of Agriculture, experiment stations, forestry societies, and the owners of extensive catalpa plantations in many states.

Until the last fifteen or twenty years the catalpa was planted and grown in an irregular sort of way. Today there is no other timber tree so widely used in artificial planting for commercial purposes and returning as handsome a profit. The great drawback to catalpa growing prior to the present period was the unfortunate mixing of seeds with the worthless varieties. Failure followed and the catalpa was given a black eye wherever this happened.

The Speciosa catalpa has a characteristic deeply furrowed bark, with a tall, straight trunk when grown in a plantation. It bears only two or three pods to the cluster and very few clusters to the tree. The common variety has a short trunk with a scaly bark, many branches, and bears seed in great quantities. The seed has five times the germinating power of true Speciosa.

It is due to the fact that the scrub catalpa is so common and cheaply produced that the country has been flooded with it by unreliable nurserymen or tree dealers, representing it as Speciosa catalpa.

Kansas. J. Moncrief.

CIVIL SERVICE examinations open the way to good government positions. I can coach you by mail at small cost. Full particulars free to any American citizen of eighteen or over. Write today for Booklet O-1143. Earl Hopkins, Washington, D. C.

SEED CORN Reid's Y. Dent, Gold Leaming, Boone Co. White, 90 Day Y. Dent, for northern farmers. Early picked and dried on a rack. A post card will bring my 48-page Seed Corn Book. It's free to you, ask for it now.
H. Z. O'HAIR, - BUSHTON, ILLINOIS.

LETTER OF WARNING.

We believe that a large amount of money was saved by the farmers of the state last year by the early testing of seed corn. This department made tests of about one thousand samples sent in from nearly every county in the state. The result of these tests showed that at least 50 per cent of this corn was low in viability. On this account, we did all that we could to advise the public through the daily and agricultural press that all seeds should be tested before planting. The fact that we had an excellent stand and a good crop of corn last year is good evidence that our warning was heeded, and that most farmers tested their seed and eliminated all that was low in germination.

We believe that when you take into consideration the fact that the value of the corn crop for 1911 was $151,000,000.00 and that of 1912, still greater, we are safe in saying that several million dollars were saved by the thorough testing of seed corn last year.

We are not yet advised as to the condition of seed corn this spring, but beg leave to submit a few timely suggestions for consideration:

Buy early, in your own state, and so far as possible, in your own locality.

It is well to buy in the ear.

Do not buy on ten days' trial.

Insist on buying your corn, f. o. b. your own station, then if seed does not comply with the law, prosecution may be brought in your own county.

If you do not get what you buy, do not wait until July or August before coming to this department with your troubles.

A thorough testing of your seed may relieve you of the expense of replanting.

W. B. Barney,
Dairy and Food Commissioner.
Des Moines, Iowa.

"It is quite an art to make good catchup," announces the latest government official cook book just issued by experts of the department of agriculture as an addition to its series of popular recipe volumes. Incidentally the government's experts decide this: Tomato sauce is spelled "catchup," not "ketchup," or "catsup." The tomato is given first place among the vegetables by experts, because it can be prepared in a greater number of ways than any other vegetable. They point out that few dinners are complete without it, either in the form of soup, sauce, salad, vegetable, catchup, chili sauce, chow chow, relish, chopped pickle, green tomato pickle, tomato sweet pickle, piccalilli, preserved tomato, or tomato mice-meat. Recipes for these uses of the tomato are contained in the government's latest cook book.

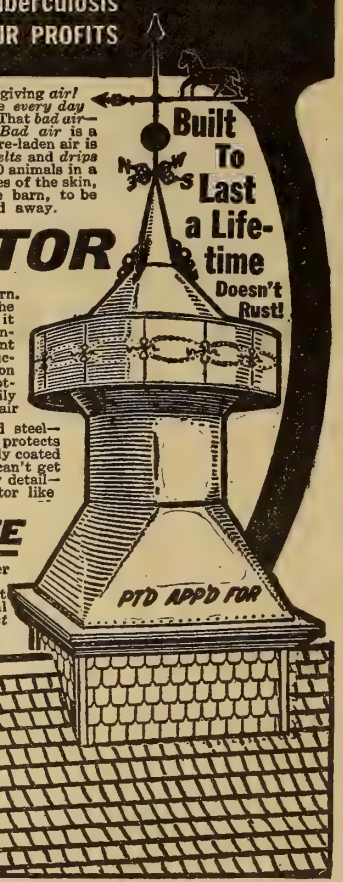
On YOUR Barn
So Your Stock Can Breathe
Fresh Air
Prevent Tuberculosis
BOOST YOUR PROFITS

YOUR cows, horses and other stock *must* have fresh, pure, life-giving *air!* Every horse and cow gives off *10 pounds* of invisible moisture *every day* full of *poisonous carbonic acid gas*, full of *unhealthy heat!* That *bad air*—must be carried away *quickly* and replaced with *fresh* air. *Bad air* is a breeding place for germs and disease—*tuberculosis!* Foul, moisture-laden air is what forms *frost* on the ceiling and inside of roof—frost that soon *melts* and *drips over everything*—keeps your barn damp, unsanitary, *dangerous*. 40 animals in a barn means a *barrel of moisture* coming out of the lungs and pores of the skin, with the foul air, *every day!* And *all* that moisture is *kept* in the barn, to be breathed and exhaled *again* and *again* by your stock, unless carried away.

The KING AERATOR



solves the problem of *correctly* ventilating your barn. It is absolutely automatic in action. Draws out the impure air and the moisture it holds, replacing it with fresh, pure dry air—without drafts. It insures the health of your stock—helps prevent tuberculosis, etc. It means a bigger milk production—more beef on your cattle—more muscle on your horses. It saves feed money—prevents rotting of barn—saves doctor bills for yourself and family now caused by going into damp barn full of germ-laden air

Lasts as long as any barn. Made of heavily galvanized steel—washers, bolts, braces screens—*all galvanized*. Shape protects the King against most severe wind pressure. Beautifully coated with alumimum. Screens keep birds out. Snow or rain can't get in. Built along scientific lines—absolutely correct in every detail—every feature protected. No one else can build a ventilator like the King Aerator.

FINE, NEW BOOK FREE

Send in name now on postal for book, price, and all other facts. This is too important to pass by. Your cows and your profits are at stake. Why not *find out* at least. It is the best move you can make *right now*. Mail postal *NOW* or tear out this advertisement and write *the first chance you get. A postal will do.* Address

Let Me Send YOU
My Wonderful New
Galloway Sanitary Separator
On 90 Days' TRIAL FREE

I'm not asking you to buy it, understand that? **I'm not asking you to buy this separator or even promise to buy it.** I simply want to send it to you so that you can test it out right on your own farm free. I know what this separator of mine is. I know what it will do. I know that there isn't another separator in the world at any price that is even in the same class with it. I know these things because I have found them out by an actual, personal investigation of the separator itself right on my own modern dairy farm.

Why! when my own experts came to me and told me the results of their final tests on this machine on which they had been working for three years I'll confess I didn't think such things were possible. Now, *after testing the separator itself, I know that they were justified a hundred times over in every claim made.*

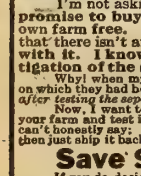
Now, I want to give you exactly the same chance I had. I want you to take this separator to your farm and test it in every way you can think of. Then, at the end of the free trial, if you can't honestly say: 'Galloway, I wouldn't be without the machine you sent me at any price'—then just ship it back to me. *I'll pay the freight both ways—the free trial won't cost you a single cent.*

Save $25 to $50 on the First Cost Alone

If you do decide to keep the separator after the free trial, I'll let you have it at *actual factory cost* with only *one small factory profit* added. You pay no middleman's profit—I sell direct from my factory to you.

Write for My Great Special 1913 Offer

Positively the greatest offer I've ever been able to make. If you will write at once, I'll tell you how you may get one of these wonderful separators *either partly or entirely free* and without any work or canvassing either.

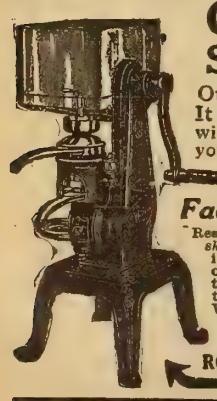


Cow Book FREE!

If you write at once I'll send you a copy of the great Galloway Cow Book absolutely free. The only book of its kind in the world. A complete manual of dairying for the farmer. Worth hundreds of dollars—priced regularly at $1.25. I'll send it free and postpaid together with my big separator catalog and full particulars of my great offers if you'll just send me a postal or letter RIGHT AWAY. Write today—NOW!

Wm. Galloway, Pres., Wm. Galloway Co.
103 Galloway Sta., Waterloo, Ia.

Before You Milk Your Cows Again Write for the
GREAT WESTERN SEPARATOR Book Sent FREE



Our free book is a gold mine of cream and butter-profit facts. It tells you how to get *all* the cream, *highest quality* cream, with *least work* and *biggest profits* for the *longest term of years*. It shows you in plain figures how to make from $5.00 to $15.00 more from every cow, per year, whether you now own a cream separator or not. Don't you want this great book, FREE? Get all the

Facts You Want to Know About Separators

Read about the Great Western. Note that the *bowl* delivers *cream* from the *top* and *skim-milk* from the *bottom*, so there's no chance of their mixing. It is self-draining and self-flushing; there are no long tubes, no minute slots, corners, crevices, or ragged edges to hold milk and collect dirt. The Great Western is ball-bearing throughout. Perfectly uniform balls, 50 to 100% harder than regular. Ball races tempered so file cannot touch them. We will arrange for you to get a Great Western on any kind of a trial to prove our claims are not strong enough.

Now! Just mail us your name and address on a postal for the big, fine, illustrated Great Western Book.

DAIRY

THINGS I HAVE LEARNED ABOUT DAIRYING.

To the Editor of The Homestead:

In my somewhat limited experience in mixed farming I have learned a few things about practical dairying, but am free to confess that there are a great many things connected with that branch of husbandry that I do not know. I am, however, of the opinion that when a man has arrived at such a stage of perfection that there is nothing more for him to learn, or becomes so egotistical that he thinks he knows it all, he is a fit subject to pass on to a higher sphere as he certainly has no place in this modern world of progressive ideas.

Some eight years ago, when I made my first investment, I thought that anything that looked like a cow, whether streaked or speckled, was a valuable machine to turn roughage into a finished product and Midas like pour a stream of gold into the outstretched hand of the owner if he milked her twice a day and allowed her to sun herself on the south side of a straw stack and shiver at night in a cold, dark and damp stable. This idea, perhaps, arose from the fact that I had seen so many apparently well-to-do farmers who kept their cows much in the condition described. Investigation into the matter revealed the astonishing fact that such farmers literally kept their cows and aside from the fertility added to the soil and the occasional sale of a veal calf or stock steer everything else connected with the cows was a losing proposition.

I have also learned that it is a mistaken idea that the cow will shell down more butter fat if you allow the dog to chase her into her stall and pound her over the back with the milk stool because she don't "so boss" the instant she is spoken to. If under such circumstances the cow were to kick you into the gutter and then step on you it would be an act of retribution for an unjust and unprovoked assault.

I have also learned that it does not pay to keep a large herd of cows on limited pasturage, as the cow, like any other machine, must have an abundance of raw material to turn out a finished product in paying quantity. If the cow is obliged to fight flies all day and mosquitoes all night and be constantly on the go to satisfy her appetite, she is likely to rest after she has procured a maintenance ration and naturally has no surplus to turn into milk and butter fat. Of course the normal cow under such circumstances will produce a certain quantity of milk, as it is her nature to do so, but this is done by drawing on her own resources and it will gradually decrease as her resources become impaired.

In order to overcome this short-feed problem many farmers resort to soiling crops such as corn fodder and feed this in the pasture to the cows, but the question arises, does this method pay? Of course, I will admit that by such methods one can keep up a reasonable flow of milk, and of the two alternatives, allowing the cows to dry up or stimulating the flow of milk by this method, it would seem to be the wiser plan, but I have noticed that where cows are fed a limited amount of corn fodder or other soiling crops in the pasture they usually hang around all day and do little foraging. I think better results would be obtained by putting the cows gradually on full feed for a few weeks until the pasture had revived or other pasture became available.

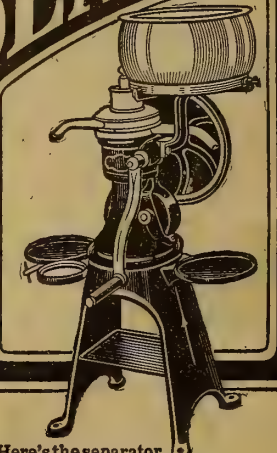
I have learned by observation and experience that the true value of the dairy cow is determined by the scales and Babcock test, and no matter along what lines of breeding or milk-producing strain her ancestors may be traced, if improperly fed, housed and cared for, she will eventually fail of profitable production. By this I do not mean to imply that careful breeding along improved dairy lines will have no appreciable effect over the mongrel or scrub cow, but I do contend that even the scrub cow if properly handled and intelligently fed, will return a profit for her food and investment.

I have learned that the man with the silo is the same fellow who draws big checks from the creamery or cheese factory and the reason is apparent. This man has given some thought to the dairy problem in the study of cause and effect. He sees that in order to produce at a profit he must reduce the cost of production and at the same time increase the food nutrients, or in other words, so assemble the food that its several properties become available in the process of mastication.

I have learned that it does not pay to feed high-priced concentrates to dairy cows unless they are compounded so as to produce an adequate balanced ration with the roughage consumed by the cow and fed in sufficient quantity to leave a surplus over the maintenance ration.

I have learned that there are two ways of determining the needs of the cow. First, by weighing the milk night and morning and having it tested, keeping an accurate record of her production and feeding according to some well-established formula worked out on a scientific basis show-

BEATRICE CREAM SEPARATORS



Here's the separator that solves the price problem. Sells for $25 to $40 less than other standard machines. The connecting link between separator efficiency and reasonable price.

Another point: Our patented device cleans the machine *in less than 2 minutes*. Will save you time—will save you money—will save you cream. Skims close and clean. Easy to run—hard to wear out. Second to none.

Waukegan, Ill.

ing the food value of the constituent parts of the concentrates. Second, by studying the cow as an individual, noting her physical condition with regard to her general healthfulness and whether or not she relishes her food and shows an increase or decrease in flesh, remembering that no absolute set rule can be devised for feeding, as individual characteristics must be taken into consideration.

I have learned that the scales and Babcock test will often demonstrate the fact that your best cow is proven to be one of your poorest, and your poorest cow often proves to be one of your best. I have learned that care, feed and breed are the A B C of successful dairying and that intelligent breeding along improved dairy lines will greatly increase the efficiency of the herd. J. J. Burke.

Barron county, Wisconsin.

KEEPING RECORDS OF DAIRY COWS.

Prof. C. H. Eckles, of the Missouri Experiment Station, in a recent bulletin relating to the keeping of dairy cow records points out that there is a vast difference in the amount of milk different cows will produce. One cow may yield three times as much milk and butter in a year as another on a third to a half more feed. One cow may be losing the dairyman as much money as another in an adjoining stall is making for him.

Clearly, it is desirable to keep only the profitable cows. To do this means that systematic records must be kept. No guesswork will do. No cow should be retained in the herd unless her milk and butter fat records shows she is profitable. At the Missouri Experiment Station one Jersey cow produced three times as much milk and butter per year for three years as another cow that was her half sister. The difference in the cost of feed eaten by the two cows was not great and both received the same good care.

The Illinois Experiment Station tested the herds of eighteen Illinois farmers, and found the same condition to prevail. The best ten cows averaged 389 pounds of butter in a year while the poorest ten cows averaged 109 pounds. They found at least one-third of the cows in the ordinary herds to be unprofitable. Many herds in other localities have been tested with the same results. It is the rule rather than the exception for cows in the same herd to differ widely in the milk produced. What the cow owner needs to know is, first of all, how much milk each cow produces and, second, how much butter fat it contains.

A good spring balance such as that shown in Figure 1 is the best for ordinary farm use. This balance costs from $2 to $3, and can be purchased from any dairy supply house. Scales may be obtained on which the dial is divided into pounds and ounces, or pounds and tenths as preferred. The latter is much more convenient in adding up the totals. This style of balance is provided with a hand or pointer which can be adjusted to stand at zero with any ordinary milk pail. This enables the weight of the milk contained in the pail to be read directly, without substracting the weight of the pail. Figure 2 shows the most convenient form of milk record sheet. Such sheets may be obtained for a nominal sum from the publishers of dairy papers. It will be seen from the illustration that each cow in the herd is given a column. Her name or number is written at the top. Each column is divided to give space for writing in the pounds and the fractions thereof, whether they are in ounces or tenths. The days of the month are listed on the left side of the sheet, and each day has a separate horizontal column for the morning and evening milkings.

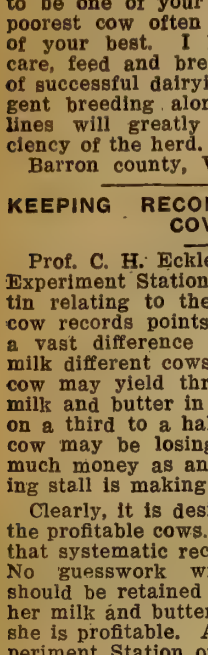

FIG. 1—A GOOD MILK SCALE.

A place is reserved at the bottom of the sheet for the total of each

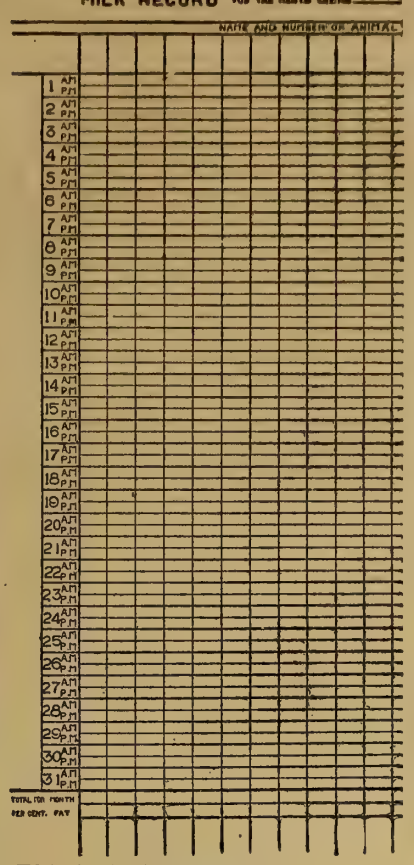

FIG. 2—A CONVENIENT FORM OF RECORD.

cow's yield for the month. Those who keep records find the adding of the long columns the most difficult part of all. To remove this serious objection it is recommended that the amounts yielded on the fifth, fifteenth and twenty-fifth days of the month be added together, divided by three, and the quotient multiplied by the number of days in the month. The result will be close enough to the actual total for all practical purposes.

Once every month a composite sample of each cow's milk covering a period of from three to five days should be tested. The test should be put in the place provided for it on the sheet, at the bottom of each column. Daily weighing is recommended because it is, after all, about as convenient as weighing at intervals. When the plan is to weigh only two or three days per month it is often forgotten altogether.

Weighing the milk daily affords the following advantages: First, enables the dairyman to feed each cow according to her milk yield. This is the only way to feed most economically. Second, indicates at once by a drop in the yield if a cow is not in good health so that treatment may be begun early. Third, shows which milkers are doing the best work and creates an interest in their work.

CHEESE AS A SUBSTITUTE FOR MEAT.

A food suitable to serve as a substitute for meat because of its composition and also because of its savoriness is cheese. It is probable that this food would have been used much more extensively if it had not been for the impression which prevailed in the past that it was indigestible and likely to induce intestinal disturbances. This theory has not been substantiated by the extensive experimental work done by the department of agriculture. On the other hand, the possibility of the use of cheese in quantity in the diet, and its wholesomeness when thus used, have been demonstrated.

Cheeses are of two general classes—those which are of mild flavor and those which are seasoned or ripened in such a way that they are highly flavored. The latter, like almost all highly flavored foods, are commonly used to season dishes made of ingredients without much distinctive flavor, or else are used in small quantities at a time to give palatability to a dish or a meal. The mild-flavored cheeses are the ones which are usually selected for eating in quantity

DE LAVAL
CREAM SEPARATORS

Are in a Class By Themselves

They cost but a little more than the cheapest, while they save twice as much and last five times as long as other separators.

They save their cost every six months over gravity setting systems and every year over other separators, while they may be bought for cash or on such liberal terms that they will actually pay for themselves.

Every assertion thus briefly made is subject to demonstrative proof to your own satisfaction by the nearest DE LAVAL local agent, or by your writing to the Company direct

Why then, in the name of simple common sense, should anyone who has use for a Cream Separator go without one, buy other than a DE LAVAL, or continue the use of an inferior separator?

The new 72-page De Laval Dairy Hand Book, in which important dairy questions are ably discussed by the best authorities, is a book that every cow owner should have. Mailed free upon request if you mention this paper. New 1913 De Laval catalog also mailed upon request. Write to nearest office.

This bank pays 100% interest and insures your investment

Your savings bank pays three or four per cent. interest per year on time deposits and taxes amount to half as much as interest. An Indiana Silo will pay you one hundred per cent. interest every year, without risk or gamble. Our easy buying plan permits you to apply this interest to payment for the silo. The

INDIANA SILO

not only pays the biggest dividend but it gives you free insurance for your live stock and feed. When pastures dry up beneath the August sun and when winter snows cover the meadows, the Indiana Silo insures you a great reserve of fresh succulent silage to draw upon. This is more valuable than money in the savings bank because every day is dividend day. What you take out of the Indiana Silo in the morning you get back with interest in the evening milk pails. Your hens reward you with abundance of eggs and your steers take on weight at a minimum of cost. Your hogs grow fat while your neighbors are shipping half finished pork to market because of lack of proper feed.

If you want quick returns on a small investment with no risk, no worry and no danger of missing a dividend, order an Indiana Silo today. We will make delivery to suit your convenience.

WRITE today for our catalogue and a free copy of the book "Silo Profits," which is the story of the Indiana Silo as written by scores of owners of Indiana Silos. And ask us for the name of our representative in your locality.

"You *buy* an Indiana Silo—but it *pays* for itself."

DIPPED IN BOILING CREOSOTE ADDS 17 YEARS TO ITS LIFE

The Des Moines Silo

Is not painted with creosote—not dipped in the ordinary way—it is run through a vat of boiling creosote. The heat forces the creosote into every check and into the very heart of the stave itself, covering every particle of the surface with an impervious coating of creosote. It makes painting unnecessary, makes rotting impossible, eliminates a large part of the swelling and shrinkage you encountered in other silos, and our patented spring hoop lug does the rest.

The Des Moines has more important special features than any other silo on the market.

They are exclusive features—the creosote, the spring hoop, the triple anchor, the three inside hoops and the refrigerator doors and door frame are just a few of them.

Write for the story of the Des Moines Silo before you buy. You can't afford, for your own protection, not to read it.

WANTED Two men for general farm work; steady work by the month. Good wages. Address Ruggles Bros., Rockford, Floyd county, Iowa.

and are the ones which may be most appropriately selected when cheese is considered as a substitute for meat with respect to quantity as well as the kind of nutritive material which it provides. The common mild flavored cheeses in the United States are the ordinary factory or cream cheese (which is practically the same thing as English Cheddar cheese), cottage cheese, or sour skim milk cheese and the commercial cheeses which are similar to it, the Swiss Gruyere or as it is commonly called, Swiss cheese, whether imported from Europe or of American make, and such foreign cheese as Edam.

As regards the nutritive value of cheese and the problem of its use in quantity, the extended experiments on the digestibility of cheese carried on as a part of the nutrition work of the department of agriculture have shown that when eaten in quantity as an integral part of the diet and as a chief source of protein and energy in the daily food, it was thoroughly assimilated. The experiments indicate that on an average over 95 per cent of the fat and over 95 per cent of the protein of the cheese are digested, and over 90 per cent of the energy is available for the body. These figures are practically the same as those obtained with meat and show that both foods are very thoroughly assimilated.

The experiments were made with young men in good health and the diet was made up of cheese of different sorts, but particularly of American factory or cream cheese cured for different lengths of time, eaten with bread and fruit. The amounts of cheese varied from about one-third to nearly one-half pound per person per day. It is interesting to note that though the experiments as a whole were long continued, the subjects did not tire of the diet and in no case was constipation, indigestion, or other symptoms of physiological disturbance noted.

DEHORNING CATTLE.

Instead of dehorning calves by the painful method of sawing or clipping, caustic potash should be applied soon after the "button like" horns can be felt. For the past few years this treatment has been used with the greatest success at the Wisconsin College of Agriculture. There is no danger that the calves will suffer from blood poisoning or other infection of the wound.

The application of the caustic potash should not be postponed, or it may give unsatisfactory results. To apply the potash, the hair is removed from about the horns close to the skin. The potash is moistened slightly and rubbed over the skin, which covers the point of the horns, until it is white. It is not necessary to rub the skin until blood comes, as this will cause unnecessary soreness. One such treatment is usually sufficient to prevent the growth of the horns.

The following precautions should be taken. The caustic should be wrapped in heavy paper to protect the hands of the operator. It should not be moistened too much, or the liquid will run down the side of the calf's head and cause unnecessary pain. The calf must be securely fastened so that the head may be held still to avoid applying the caustic anywhere except over the horns. One stick of caustic potash, if preserved in a tightly corked bottle, will serve to dehorn many calves.

BREAKING YOUNG COWS TO MILK.

To the Editor of The Homestead:

Many cows, especially young ones, are very troublesome to milk when fresh, owing to the feverish and caked condition of the teats and udder. I find that after milking a liberal application of vaseline to the teats and lower part of udder night and morning, for four or five days, very effective as it leaves the teats soft and pliable, and has a soothing effect on the cow. I have tried this on four young cows with gratifying results, and find it greatly lessens the terror of breaking them to milk.

Minnesota. R. B. Tyler.

The Bowman bill, which will allow counties to use convicts from the penitentiary, was passed by the Kansas senate. It provides that any county or city which desires to do special road work may market a requisition on the penitentiary board for prisoners. The state is to furnish the guards, but the counties are to pay the guards and support the men and also pay the state a reasonable fee for the use of the men. The money is to go into the fund for the prisoners or for the support of the families of the prisoners.

One foresees the triumph of the potato, unforeseen by William Cobbett, says the London Chronicle. Not so much as a food, but as a means of motion. Coal is giving out, petrol is going up in price and down in production. The supply of both is limited and must come to an end, but there comes the cheer that alcohol will be the motive force of the future. Petrol and coal may give out, but the earth will always grow potatoes. Potatoes can produce alcohol, and alcohol can drive engines. In the potato we seem to have discovered the secret of perpetual motion.

One apple seed contains one-thirty-five thousandths of 1 per cent of cyanide. According to that measurement, the shipment of 119 casks of apple seeds, passed through the custom house in Kansas City is hardly dangerous. The seeds were shipped from southern France for distribution in Kansas City to southwestern fruit growers. The customs house also passed fifteen tons of chicle, sent from Canada to a Kansas city chewing gum factory.

How to Adjust and Care for the Modern Automobile.

By W. H. Ruther.

ALL THE power applied to the rear wheels of the motor car must pass through the universal joints and it may be easily understood that here there is severe strain and wear at all times the car is running and the manufacturer has not yet fully succeeded in thoroughly lubricating it. It should be kept clean and a leather protector filled with grease kept on it at all times which will give better lubrication and more than double its natural wearing life.

The lubrication of the motor car must be closely observed as upon this greatly depends the success or failure of the car. Never experiment with new brands of cheap oil because the expense of so doing may prove many times more costly than the oil. Too much oil will foul the spark plug and prevent the spark passing, while too little oil will cause the engine to overheat and the piston to stick. This may be determined by the operation of the engine.

When the lubricating system is accidently cut off the engine will overheat causing the oil on the outside of the cylinder to fry. It is far better to feed a little too much oil than not enough. Feed until a light blue smoke begins to appear at the exhaust pipe. The cylinder requires five to twelve drops per minute, depending on the age of car, speed of engine and size of cylinders. At ordinary running speed with medium size cylinders about nine drops per minute for each cylinder is required.

When oil is fed into intake pipe from lubricator it will be necessary to multiply the number of drops per minute for each cylinder by the number of cylinders to get the correct amount for all. In a car two or more years old which has run several thousand miles it is far better to use a heavy lubricant oil as it will hold the compression better and the engine will deliver much more power. Engine bearing should have seven to nine drops per minute and receive frequent attention to make sure supply is still flowing.

The clutch sometimes gives trouble. We have two kinds of clutches in ordinary use, one being known as the multiple disk while the other is the cone. The multiple disk clutch which in the last few years has become so popular in the manufacture of automobiles, depends on friction between metal disks which are pressed together by a large spring to engage them. When this type of clutch is kept running in oil it rarely gives trouble although the surfaces will sometimes stick and the clutch will not disengage. When this is the case run out oil, fill with kerosene and let stand until you can free the clutch. Then drain off kerosene and refill again with kerosene, this time washing clutch thoroughly and drain. In my years of experience I have found nothing better in which to run the multiple disk clutch than oil or kerosene mixed with a small amount of graphite.

The other type of clutch in common use is the cone clutch which is the simplest form manufactured. This type receives its friction by a leather covered cone being pressed at a bevel into a broad, heavy, beveled rim flywheel by a heavy coil spring. The leather friction surface will in time wear so the clutch will not hold in which case it is necessary to replace with a new leather. This must be riveted or bolted on and should you attempt to replace the leather (which is not advisable unless you are handy with machinery) be sure to have all rivet and bolt heads below the surface of the leather so they will not scratch the bevel in the flywheel.

When running on wet, muddy roads dampness finds its way into the rims and as most rims are of metal it rusts them, causing the rubber casing to stick and injuring the rubber in the casing. Should this occur carefully remove the casing, rub off rust with old file, apply kerosene with brush or piece of cloth and let stand one hour. Then rub off well with old cotton cloth and apply a coat of shellac, let dry, apply a second coat of shellac and when this is dry the casing is ready to be replaced.

So long as the steering mechanism performs its duty it is given little attention, but the failure of this mechanism at high speed will cause a quicker and more dangerous wreck than breaking any other part of the car.

Keep all oil and grease cups well filled and all joints protected from dust and dirt with leather tire protectors which are furnished for this puspose. Keep all joints tight and allow no nuts to work loose. There should be very little play or lost motion in this system although the joints must not be drawn so tighly as to make steering difficult.

Make sure that the drag link and steering knuckles are not bent as this will wear out the tires very quickly and probably cause a wreck. To test for this turn steering wheel until the front wheels are parallel with rear; take something having one straight edge and hold against wheels just above or under the hubs and if steering wheel is turned to correct place the front and back part of all wheels should touch the piece evenly on both sides of car.

The radius or distance rods are supplied to the automobile to keep the rear axle from twisting out of shape as the motor car at times is subject to severe strains. One wheel may be on level track while the other hits a rut or stone, and while the rods are put there to hold the car straight, in some severe cases it will twist it slightly anyhow. These rods are furnished with adjustments to take this up and you may adjust the rod until it is again true.

In washing the automobile the water must be turned on easy, for a heavy pressure will cut the varnish and paint, dulling the appearance of the car. It is only necessary to soak the mud then turn on a gentle stream and float it off. After you have thoroughly removed the mud and sand, dry with clean chamois skin being sure that it is free from grit and foreign substances that might scratch the paint. When dry the finish may be retained by applying a good coat of furniture polish and rubbing dry. The mud may be sponged off the tire, being careful not to let water enter the bead. Do not try to wash the upholstery as the water will enter the button holes and creases where it cannot run off and rot them. Also be careful not to get water in the spark coil as this will form a coating on the vibrator points and thus interfere with the passage of the current.

Trying to get up speed in too short a time has ruined more hand separators than the work of skimming.

They're All you Ever Hoped for

in rubber boots. One pair of either the "Century" or the "Kolrib" Beacon Falls Rubber Boots will convince you that you've discovered the ideal boot for wet, snowy weather. They are made of choice selected rubber that cannot crack or split out. Reinforced at the critical points where stress and strain attack them, they stand up and wear surprisingly long. At heel, at toe, at ankle, at sides; inside, outside, right side, wrong side you'll find honest worth worked into the very rubber and linings.

BEACON FALLS

LOOK FOR THE CROSS

Century and Kolrib Rubber Boots

have no competitors in quality. Thousands of farmers everywhere are active champions of these two.

SOLES The foundation of these boots is so tough that it's puncture proof. Rather than puncture, chip or crackle off it rebounds when it strikes a sharp obstruction.

UPPER or VAMP Hot rubber under powerful pressure is forced into strong duck cloth. From this the vamp is made. It's tough, yet conforms to the shape of foot—comfortable, elastic, pleasant. Note extra reinforcement above Kolrib sole and heel. Also vertical strips of pure gum on top of boot which make it "stand up".

ANKLE Reinforced at this weak spot with a pure gum strip the ankle doesn't break down or crack as you've noticed in other makes.

It is a pleasure to own a "Century" or a "Kolrib". Your feet get a warm, snug welcome as they slip in. You have a pleasant anticipation any time you prepare to put them on.

Ask your shoe dealer. If he hasn't them, write us his name and ask for free booklet No. 10.

MONITOR DOUBLE DISC DRILL
Increases the Yield
Raises the Grade
Saves 20% of the Seed

Hundreds of farmers have carefully tested out the MONITOR DOUBLE DISC DRILL and in every case have found that it increases the yield, usually from three to seven bushels to the acre—raises the grade and saves at least 20% of the seed. It will actually save its cost in a single season.

THE MONITOR WAY IS THE ONLY RIGHT WAY

It deposits the seed on the downward turn of the disc—at the bottom of the furrow—in two rows, one inch apart and covers it with moist soil and not dry top earth as is done by other drills.

Owing to its uniform depth the seed all comes up at the same time—ripens evenly, insuring better grade—increased yield with less seed—it pays for itself.

The MONITOR DRILL cannot be clogged in any soil, mud, gumbo or in weedy or cornstalk ground, and its draft is one-third lighter than any other.

Our FREE Illustrated Book on Monitor Drills will interest you. Write for it today.
The Flying Dutchman Dealer in your neighborhood sells Monitor Drills. Look him up.

Complete, with thermometer, egg tester, set up, ready to run. My price saves you $5.00 or more. Address **R. F. Neubert,**

Box 787 Mankato, Minn.

POULTRY DEPARTMENT

THIS department is edited by a competent poultryman, who will be pleased to answer questions concerning diseases, poultry management, etc., when they can be answered through the department. Questions will not, however, as a rule, be answered by mail, and stamps need not, therefore, be inclosed with inquiries. Address all letters relating to poultry topics to this office.

CLEAN YOUR INCUBATOR.

It is very important that the incubator be cleaned before putting in the eggs. If this was not thoroughly done after the last hatch the past season, it should be attended to before putting in the eggs this spring. The machine should be thoroughly cleansed with soap and warm water. Then wiped out with a rag that has been wrung from water into which has been poured ten or fifteen drops of carbolic acid. This serves as a disinfectant. Then there will be no disease germs to prey upon the young flock as soon as they come from the shell. After the hatch is off remove all egg shells and the cloths from beneath the trays. With a dust brush sweep out all loose filth. Wash the trays in the carbolic acid water and wipe out the bottom of the incubator with the cloth wrung from the warm carbolic acid water. Run the incubator a few hours until the floor and trays are perfectly dry. This gives it a chance to dry out thoroughly. Then put in the new batch of eggs. By carefully cleansing and disinfecting the incubator after each hatch severe bowel trouble in the flock may be prevented.

SELLING EGGS FROM PURE-BRED POULTRY.

To the Editor of The Homestead:

The eggs for hatching trade is getting to be quite a feature of the poultry business and better prices are being obtained each year for the eggs of the really choice specimens of the various breeds. While complaints often arise regarding results from eggs purchased for hatching, on the whole this feature of the chicken business proves satisfactory providing both parties to the transaction act in good faith. Probably the most fault found is among beginners; they expect too much, especially early in the season. Then, again, some breeders send out eggs in the spring without knowing positively that a large per cent of them are fertile. A breeder should know that a reasonable proportion of his eggs are fertile before he fills an order.

People who buy eggs for hatching with the expectation that every egg will hatch and that every chick will develop into a prize winner are pretty apt to be disappointed. Any poultryman of experience knows that if he can get five or six healthy chicks from a sitting of eggs costing from $2 to $5 is getting his money back if he gets the kind of chicks he pays for. Any one of those chicks, raised to maturity, will be worth $2 or $3, and if there is a good cockerel among them the purchaser is well paid for his investment. If one buys birds it is necessary to pay from $3 to $10 per bird, if one expects to get first-class breeders. But one can secure eggs from some reliable breeder's pens at about the same price per sitting that he has to pay for a single bird, and the chances are that one will raise at least three or four birds from each sitting and often many more than this number are raised. But if one raises only two good birds to maturity he is ahead and should be well satisfied with his purchase of eggs.

Spending money for eggs for hatching is like spending it for almost anything else. The results depend somewhat upon the business sense in spending it. One should always be reasonably sure that he is sending his money to a reliable breeder, who has just what he is advertising for sale. It must be admitted that some breeders fall far short of fulfilling their promise to the letter. Some sell eggs that do not hatch, or, if they do, the chicks are of poor quality. But the general run of breeders should not be judged by these dishonest exceptions. A breeder of experience is usually jealous of his good reputation, and he will send out eggs from good stock that will hatch.

The fresher eggs are the better for hatching purposes. Every breeder is aware of this fact, therefore he should ship none that are not perfectly fresh. Then if the buyer of the eggs will use them as soon as they arrive, or at least after a rest of twenty-four hours, he will secure better results.

It behooves every breeder to pack his eggs well. There are several good egg boxes on the market, made of jute board, lined and partitioned with double-faced corrugated paper, which encloses each egg in a space by itself, thus protecting it from severe jars and changes in temperature. If one has many eggs to ship, in one or two sitting lots, it pays to get a sufficient number of these boxes to provide for every shipment. They may be obtained from poultry supply houses quite cheaply in dozen lots. If one does not have enough shipments, however, to warrant buying these, four-pound and eight-pound grape baskets make good carriers. Splint baskets are a little more attractive, but being lighter they require a little more packing material. Excelsior probably makes the best packing material. Put about two inches of it in the bottom of the basket and pack plenty among the eggs. Wrap each egg in two thicknesses of paper and lay them in the basket so as not to touch each other or the sides of the basket. Put a layer of excelsior on top as well as in the bottom of the basket. If more than one layer of eggs is put in, place a thick cardboard on top of the layer of packing and place the second layer of eggs as the first. The regular basket cover may be used or a cloth may be sewed over the top, provided the eggs are to be shipped by express. If sent by parcel post the cover must not be fastened down so as to prevent examination of the contents of the basket. But whether sent by express or by mail, place a tag on the package where it can be plainly seen, marked "Eggs for Hatching—Handle With Care," also your name and address and the name and address of the customer should be written plainly on the tag.

W. F. P.

TUBERCULOSIS IN POULTRY.

One of our Wisconsin subscribers, Mrs. J. L. Hill, sends the following inquiry:

Affected chickens first become lame and it is some days before we notice any other symptom. They sit around a great deal, seem quite thirsty and eat, but keep losing in weight. Not all of them are lame and some have a diarrhea. We have killed a good many as soon as they showed signs of the trouble and all I have examined have large livers covered with yellowish spots. Sometimes the spots are in other places. Would like to know if they have tuberculosis and if it will do to set the eggs from hens that are laying right along.

Ironclad

TRADE MARK

Wins in the Two BIGGEST HATCHING Contests Ever Held

Why take chances with untried machines when for only $10 we guarantee to deliver safely, all freight charges paid (East of Rockies) BOTH of these big prize winning machines fully equipped, set up ready for use? Why not own an Ironclad—the only incubator that has for two years in succession (1911 and 1912) won in the **greatest hatching contests ever held.** In the 1912 contest conducted by Missouri Valley Farmer and Nebraska Farm Journal, 2000 machines were entered including practically every make, style and price. With 140 egg Ironclad—the same machine we offer with Brooder, freight paid for only $10. Mrs. C. F. Merrick, Lockney, Texas hatched 148 chicks from 148 eggs in 1912 contest

140-EGG Ironclad Incubator

Don't class this big, all metal covered, dependable hatcher with cheaply constructed machines—and don't buy any incubator until you know what it is made of. Note these Ironclad specifications. Genuine California Redwood, triple walls, asbestos lining, galvanized iron covering. Large egg tray, extra deep chick nursery—hot water top heat, copper tanks and boiler, self regulator, Tycos Thermometer, glass in door and many other special advantages fully explained in Free Catalog. apparently in good health and with red combs. Is there any danger in using these eggs?

Tuberculosis is becoming alarmingly prevalent, so much so that one fowl out of every dozen, varying in different flocks, is affected.

This disease has a single cause, the bacillus tuberculosis. It is wholly contagious and must be transmitted either through fowls, or possibly mammals though the latter is not very probable. The English sparrow is responsible for much of the poultryman's trouble by carrying infection and mites.

The lameness is the first outward symptom. The internal organs have been affected indefinitely. Two symptoms our correspondent gives prove beyond a doubt that her fowls have this dreaded disease, viz: Losing in weight and the spots to be found in different parts of the internal organs. Lameness, diarrhea and thirst also indicate tuberculosis, but these symptoms are the first noticeable effect of many other diseases. More and more our people are examining their dead fowls, thus enabling us to more intelligently answer inquiries.

It is also to be hoped that those fowls that died were burned. A wholesale slaughter of every bird that shows any symptoms of the disease may sound like a heroic measure, but it is the only safe thing to do. Chicks from afflicted parents will show up weak, with humped backs, sometimes twisted wing feathers and big joints. The tubercules are more frequently found in the lungs of young chicks. To test the lungs of a chick, put a piece of one in water. If healthy, it will float. If diseased it will sink.

If the bright, healthy appearing chickens our correspondent mentions could be taken to new quarters and every bird removed that begins to grow listless, it will be safe to keep them. Those that are affected even though there is no outward sign, will sooner or later die from the effects and the sooner the better.

Clean up and disinfect the buildings and yards. Admit sunshine into the house, if you must tear the roof off to do it. Sunshine and fresh air, and germs have no affinity. Theoretically the eggs would be harmless to use—but who would eat one of them if he knew it?

SHIPPING EGGS FOR HATCHING.

To the Editor of The Homestead:

The season is at hand when the business of shipping eggs for hatching will be in full swing. My experience in the past has been so varied along this line, the exasperating ones being in the majority, that I must confess my confidence in the honesty and common sense of my fellow poultry breeders received many a rude shock. I believe that the large commercial plants, as a rule, understand how to pack and ship eggs in a safe and satisfactory fashion. It is the small breeder who seems to be most often the sinner in this respect, although from some of the well-advertised breeders I have received eggs in an inexcusable condition.

The day of the parcel post offers better rates and facilities to shippers of eggs for hatching. The requirements for the packing of all eggs to be sent by this agency fit in well for the needed care for hatching eggs.

And I have found not only the packing and shipping at fault. The careful selection of eggs to be sold for hatching purposes is not always observed. I well remember my red-hot indignation on one occasion, when I had ordered a 100 lot of eggs from a firm of breeders who had advertised extensively and alluringly. The eggs came very carelessly packed in a bushel basket, and such eggs! I could not have gotten together from all the eggs laid by my own flock such an array of lop-sided, crooked, long, bunty, ridged eggs. Many were so under size for the breed, that they might almost have passed for bantam eggs. They were in every shade of color, from dark brown to purest white.

Well, I had bought the eggs, paid the price and also the expressage. My incubator had been waiting for them for several days. So, with darkest misgivings, I put them in the machine and tended them faithfully for three weeks. About a dozen crippled, weak babies hatched, and every one gave up the ghost in a gratifyingly short time. Other orders received that season came packed in market baskets, none of them being properly protected. To say I was disgusted is to speak very conservatively. From four or five 100 lots from as many different breeds, I did not have a single good hatch.

But the tide turned at last. An order sent to an Iowa breeder for a 100 lot of eggs, came in a shape to delight my inmost heart. A regular shipping egg case was used with patent fillers. Every egg was well wrapped in soft paper, enough paper being used to completely fill the compartment. Every egg was carefully placed on the small end, a matter which the other shippers had evidently considered of small importance. The thorough selection of the eggs was noticeable. Such a beautiful uniformity in size, shape and color one rarely sees. Of course, the express charges were somewhat higher for the heavier package, but who would not rather pay a little more for the transportation, than have a lot of cracked, addled eggs on hands sure to be an utter loss?

That year with me was one of experiment. I was trying to make a flock of one breed pay for the change into a flock of another. And the results I obtained from this one order, proved the basis for the new flock.

I do not for a moment believe that all the unsatisfactory lots of eggs I received were because the shippers were deliberately dishonest. Most of them simply did not understand how to do the shipping in the right way. As all this happened some years ago, I was under the impression that there was surely improvement by this time. But a recent writer in the poultry journal details an experience so similar in many respects, that I feel that education is needed in regard to this business.

All orders should be at once acknowledged, and the day of shipment noted. When the eggs are shipped, which should always be on the day signified, if possible, notification should be sent of the shipment. No business house with any sort of reputation omits this. It is particularly necessary in shipping hatching eggs, so that the purchaser may be in readiness to care for them.

The reason for packing eggs with the small end down is an imperative one. If packed on the large end, the weight comes on the air cell, stretching the inner skin, and causing the egg to become addled. It is almost impossible to addle an egg packed on the small end. Of course the package should be kept right side up, which it usually will be if so marked on the outside.

To quote from the recent experience referred to:

From some breeders came eggs packed in new boxboard cases, and from others in baskets, and from that down all through any conceivable list of things which might by stretch of the imagination be called containers for hatchable eggs. They arrived in every imaginable condition, from broken to addled or muddled, with about 60 per cent in good condition. One even sent eggs which we afterward proved to have been incubated and tested out of the incubator.

In only three cases was shipment made on the day requested, and in only one case was the notification of shipment asked for sent. As a result of not complying with what I believe was a very simple and just request, my own plans for incubating were sadly disarranged. Three times we were forced to either lose several hundred eggs or order more incubator space by wire. It seems to me that every breeder, no matter how small, should at least use a postal card and acknowledge an order when received, and state on what day shipment will be made, and then, above all else, ship on that day.

The style of carrier does not make so very much difference, so it is strong and non-pliable. Baskets may perhaps be safely used for small orders, but personally I dislike them very much. A container with which egg fillers can be used are by far the best. In some ways so pack the fragile merchandise so that it will not be shaken en route. Have plenty of packing, and fasten all covering strongly. To a clear and legible address should be added the words, represented in an emphatic a way as possible: "Eggs for hatching," "Handle with care." "This side up.'

Perhaps the best general rule in this matter is the gilden rule. Treat the other fellow as you would wish to be treated if you were sending the order. Do your best to have the eggs reach him in as nearly as good a condition as possible as when they left your hands. You do not know his circumstances, nor how slackness on your part may handicap his chances for success. The Good Book is a safe guide to follow. And by following this rule you not only help your brother toiler, but you increase your own chances for success. A few satisfactory deals will bring you increased business. "A good name is rather to be chosen than great riches," said Solomon, and we might add, "A good reputation is often the way to material prosperity."

Mrs. S. B. Titterington.

That heavy chick losses are mainly due to carelessness is the warning issued by Prof. J. G. Halpin, of the Wisconsin College of Agriculture, to brooder operators. "Most brooders are kept so dirty and unsanitary that reduced vitality if not death of the chicks is the result," declared Professor Haplin. "Before the chicks are put into it from the incubator every brooder should be thoroughly cleaned and disinfected, and then kept sweet. Improper heating also retards the growth of many chicks. The thermometer is a poor indicator of the correct temperature. In their endeavor to maintain an even temperature, men sometimes turn down the flame even when the chicks are huddled, shivering under the hover. Best results will probably be obtained by throwing away the thermometer and simply watching the chicks. It is easy to see whether they are too warm or too cold. A variety of feed, including

TELLS WHY CHICKS DIE

J. C. REEFER, the poultry expert of 1630 A Main St., Kansas City, Missouri, is giving away free a valuable book entitled "White Diarrhoea and How to Cure it." This wonderful book contains some new scientific facts on white diarrhoea and tells how to prepare a simple home solution that cures this terrible disease over night and actually raises 98% of each hatch. Everyone interested in poultry should certainly write Mr. Reefer for one of these valuable FREE books.

—"My flock of Rose Comb Brown Leghorns are greatly improved this year, as I have some fine hens and ten cockerels that score about 93 or 94," writes William Sailer, Ackley, Iowa, whose advertisement appears elsewhere in this department. "They are of a great laying strain. I have been raising and improving my flock for nine years, and they are looking fine and are healthy."

—Mrs. Monroe Marts, Ottumwa, Ia., is offering Single Comb Brown Leghorn eggs for sale from prize-winning stock in her advertisement that appears elsewhere in this department. At the Ottumwa Poultry Show, December 6-20, 1912, Mrs. Marts won a silver cup on best display; first and second on cockerel; first, second, third and fourth on hen; first, second and third on pullet; first on pen, and first on ten.

—Mrs. L. W. Renaud, Bondurant, Ia., in furnishing copy for her advertisement found elsewhere in this department, writes: "Stock is in fine shape, early maturing and very heavy layers. Visitors are always welcome. Have raised Rose Comb Brown Leghorns exclusively for the past five years. Have shipped birds on approval to many parts of the United States and have never had a complaint."

—Bert A. Randell, Mt. Zion, Iowa, has an advertisement of Black Langshans and Indian Runner ducks elsewhere in this department. He writes: "We have sold all of our cockerels and have mated up two fine pens, besides our large range flock of Langshans and Indian Runners. We are getting lots of eggs and they are proving very fertile, so we are well prepared to furnish eggs at farmers' prices."

—The advertisement of Frank G. Myers, Iowa City, Iowa, offering Single Comb White Orpington and Single Comb Wyandotte eggs for sale, appears elsewhere in this department. Mr. Myers' Orpingtons are of the Kellerstrass strain and his White Wyandottes are extra choice stock and snow white. The prices at which he can furnish eggs from these two varieties are stated in the advertisement above referred to.

—The Elmwood Poultry Farm, Blakesburg, Iowa, states that The Homestead has sold all their Single Comb Minorcas, but that they still have several prize-winning Rose Comb Minorcas left that are extra large fellows and will be priced reasonable. They are offering fifteen eggs for $1 from their Single Comb pen, which contains their silver cup prize winners, and from their Rose Comb pen headed by Black Giant, a $25 bird weighing nine pounds.

—John M. Hall, Williams, Iowa, has a selected flock of snow white Rose Comb Wyandottes consisting of about fifty pullets headed by one cock and three cockerels. His advertisement appears under the duck heading in this department, as he is also advertising Mammoth White Pekin duck eggs for sale. He has been a breeder of the White Pekins for six years and has spared no money in getting the best of stock. For prices on white Rose Comb Wyandotte chickens or White Pekin duck eggs refer to the advertisement.

—W. W. Forbes, Jefferson, Ia., breeder of Rose Comb Rhode Island Reds, writes that he has had the best season on the sale of cockerels since he has been in business. The demand for this breed is growing and he says it is difficult for him to fill orders. He has two pens, Nos. 1 and 2, from which he will sell eggs the present season. From pen No. 1 he will sell at $5 per fifteen, and from pen No. 2 $2 for fifteen. For further details see advertisement elsewhere in this department and write him. He reports that The Homestead is the best advertising medium he has ever had.

—John W. Houselog, Bellevue, Iowa, is booking orders from his choice flock of White Plymouth Rocks and Mammoth Pekin ducks. He writes: "My range birds are headed by cocks scoring up to 92 points. Also have a pen mated, but will sell only a limited number of sittings from them, consisting of nine large pure white hens, headed by a cockerel scoring 93 points and winner of second prize at the Wisconsin Poultry Association. My flock of ducks are pure white, mated to drakes, the sires of which scored up to 97 points. Am able to handle incubator orders as well as small ones. Will ship out only fresh eggs. Any order, no matter how large or small, will receive my careful attention. Fair hatch guaranteed or eggs replaced at one-half price. Circular sent on request. Order early. See advertisement in this department."

Chas. Guth's Cockerels Sold.

—Chas. Guth, Berwick, Ia., writes that his cockerels have all been sold and every customer is well pleased. He is now offering eggs from his prize-winning White Rocks. The grand champion cockerel at the 1911 Des Moines Poultry Show is the lord and master of this flock. There is nothing better than Guth's White Rocks.

RHODE ISLAND REDS.

$26,500,000.00
Hog Cholera Losses In 6 Months

E. Myers, President, E. Myers Lye Company

The above is a conservative estimate of the stupendous sum lost by American farmers during the first six months of 1912 from hog cholera alone! (Not including the **enormous loss from hog worms.**)

Now, men, let's make a mighty, united effort to put an end to this terrific slaughter—this awful waste of money. We can do it if we work together. I **know** we can do it. I have the remedy that **has been proved will prevent** hog cholera, put your weak hogs on their feed, **rid them of worms,** make them strong, hearty, fat and healthy. My remedy,

Merry War Powdered Lye,

is very simple and inexpensive to use and results have been **proven.** In an interview, which was so important that it was given a full column on the front page of the Fort Dodge, Ia., Messenger, on November 7th, 1912, Mr. Collie Bowers, a prominent hog raiser in that section, says: "Last Fall I had lost twenty-six young pigs, when I was told to get some MERRY WAR POWDERED LYE and feed it with swill. Every one of the eight or nine pigs that were then sick recovered and I had no more trouble. This Fall the same sickness started after I began feeding this year's crop. I started the Merry War Lye treatment and the pigs got well. My brother used the Lye with his pigs and saved all the sick ones. Earnest Stromberg heard about the treatment and came to our house in the night to learn how to use it. We told him and he drove to Fort Dodge in the night and got a grocer up to get the MERRY WAR POWDERED LYE. His pigs all got well."

You can easily prevent an outbreak of cholera among your hogs, for again I say to you that MERRY WAR POWDERED LYE is the **safe preventive** of that dread swine disease. You can tell your neighbors about it just as Mr. Bowers in this interview is telling his farmer friends about it. You can in this way help to put an end to this needless and enormous money loss. Will you do it?

There Are No Substitutes

Go to your nearest dealer today and get a few cans of MERRY WAR POWDERED LYE. Don't accept an ordinary, old-fashioned lye as a substitute. To use such a lye would be but a doubtful and perhaps a dangerous experiment. MERRY WAR POWDERED LYE is the specially prepared lye that is **safe** to feed to hogs—that is **not** an experiment. **Insist** on the genuine.

Its wonderful merit has been **proved by experience.** Price only 10c per can **(120 feeds).** It is convenient to buy in case lots, 4 doz. cans, $4.80. If your grocer, druggist or feed dealer can't supply you, write us stating their names. We will see that you are supplied; also send you, **free,** a valuable booklet **"How to Get the Biggest Profits From Hog Raising."**

Order direct from us in case lots 4 doz. cans, $4.80, if your dealers won't supply you.

Learn Horse-Training —Make Big Money!

$1,200 to $3,000 a Year—at Home or Traveling

Prof. Jesse Beery

Send Coupon for "Horse-Trainers' Book" FREE

Prof. Jesse Beery, known from one end of the country to the other as the World's Master Horseman, having retired from the arena with an independent fortune, is giving the world the priceless secrets of his marvelous success. A copy of his wonderful "HORSE-TRAINERS' PROSPECTUS" will be mailed, free of charge, to all who are ambitious to master this highly profitable and intensely interesting profession.

Vast Audiences Thrilled by Beery Exhibitions

The thrilling exhibitions given by this King of Horse-Tamers and Horse-Trainers have never been equalled. His mastery of fierce, man-killing stallions, without whip, curb bit or other cruel devices, has astounded the world. The most unruly horses—kickers, tricksters, balkers—subdued while multitudes watched, wondered and applauded. Medals, trophies and honors of all kinds, showered upon Prof. Beery by admiring thousands, bear eloquent testimony to his matchless skill.

Learn Beery System by Mail, at Home

The Beery Correspondence System of Horsemanship is the only instruction of the kind in the world. The lessons are simple, practical and complete. Learn in spare time, right at home, to take the most vicious horse and subdue him in a few minutes. Prof. Beery can teach you how to break any horse of bad habits—teach a horse to drive without reins. How to tell the disposition of any horse on sight—judging a horse right the first time! How to cure shying, kicking, biting, balking, fear-of-automobiles-and-trains and all other bad traits **forever.**

Break a Colt in 8 Hours!

The lessons in Colt-Breaking alone are worth the price of the entire course. You can train a colt, **in 8 hours,** to be absolutely trustworthy. There is big money in breaking colts and curing horses of bad habits.

Graduates Making Big Money

For example, take the case of Emmett White, Kalona, Iowa, now a prosperous professional Horse-Trainer. Mr. White says: "I wouldn't take $500 for what you have taught me. You may judge of my success when I tell you that I have been able to buy *a home and an automobile* solely through earnings from training horses as taught by your excellent methods."

A. L. Dickinson, Friendship, N. Y., writes: "I am working a pair of horses that cleaned out several men. I got them for $110, gave them a few lessons and have been offered $400 for the pair."

Coupon Brings Prof. Beery's Great "Horse-Trainers' Prospectus" FREE

If you want to get into a big money-making profession—if you own unruly horses with bad habits—if you enjoy travel—if you are a natural-born trader and can buy cast-off horses cheap to sell at big profit when trained, send now, today, for this grand Free Horse-Trainers' Prospectus. Tell me all about your horse. (42)

SAVE 25 TO 50% ON HARNESS $25.00 FREIGHT PREPAID

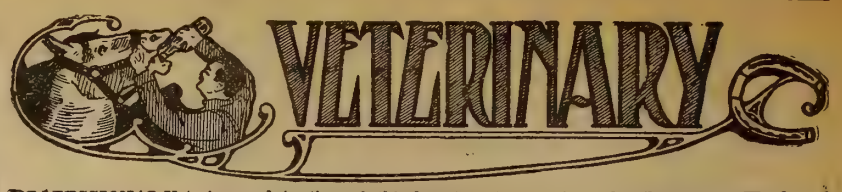
For $25.00 we offer our Leader No. 53—1½ inch Team Harness set down at your railroad station. This harness, designed and made for durability and service is the biggest bargain we have to offer. While the price is exceptionally low for a harness of this nature, quality has not been sacrificed on that account. But, "after quality, it's the price that counts." In the harness here illustrated only the very best grade of Oak Tanned Leather has been used in its manufacture and our money-back guarantee stands behind every sale.

We issue a 100-page, completely illustrated catalog, jammed full of just such bargains as shown in the illustration.

Just drop us a card and we will send you by return mail one of these handsome books. We manufacture all our own harness in our spacious factory at Waterloo. This alone accounts for the rock bottom prices we quote—no jobber, salesmen, agents or brokers to split up the profit—just the manufacturing cost with one small profit added. This accounts for the fact that we are absolutely the largest manufacturers of harness and leather goods, selling direct from factory to user.

A comparison of quality and prices will surprise you. Write today to

WESTERN HARNESS & SUPPLY CO., 613 Main Street, WATERLOO, IOWA



PROFESSIONAL Veterinary advice through this department to regular subscribers only. We do not answer veterinary inquiries for the benefit of "neighbors." Parties desiring information will be required to send their names in full with their address. No question will be answered by mail unless accompanied by a fee of one dollar. In order that correct information may be given, the symptoms should be accurately described, stating of how long standing, together with color and age of animal, and what treatment, if any, has been resorted to. All veterinary inquiries should be addressed to this office.

SYMPTOMS AND TREATMENT.

WEAK STIFLE.

I have a three-year-old heifer that is lame in one hind leg. When she starts to walk her leg is stiff. She can swing it from the hip, but seems to have no control of the rest of the leg until she has walked around some, then I can hear something snap and then she walks all right again. She has been lame about a year.

The muscles and ligaments of the stifle are weak and let the patella (knee cap) slip out and in. Twice daily rub the stifle with a liniment composed of one part each of turpentine and aqua ammonia and six parts of raw linseed oil. Stop for a few days if the skin becomes sore. Keep heifer in a box stall.

DISEASED TONGUE.

(1) Have a May Hereford heifer calf that has been ailing about a month. At first we thought her jaw had been bruised, but after examination found a lump about the size of a fist on the root of her tongue. Have given her salt peter in water. Would you advise opening the affected part? (2) We also have a five-months-old heifer calf which when driven out of the barn about a week ago started to run, stopped short and backed up, pulling her front legs back stiff. Then she fell over as though she had been shot. She can get up on her front or hind feet, but not on both. Have rubbed her back with turpentine and dip. This heifer is of a wild disposition and is easily excited.

(1) If there is a soft spot in the lump on tongue it should be opened, for evacuation of pus; not otherwise Paint it with tincture of iodine twice a week. Give ten grains of iodide of potash in drinking water twice a day until injurious effects are seen; then stop for a time, but start again as soon as the alarming symptoms abate. It may be "wooden tongue" from actinomycosis fungus that causes lumpy jaw. (2) The calf had an attack of apoplexy, or a fit, and there is pressure on the brain from a clot of blood, or collection of serum. Chances of recovery are poor. Give iodide of potash as in the other case and apply a blister to the poll of the head. Keep bowels active.

CONGESTED UDDER.

Some time ago I purchased a cow at a sale, supposed to be all right. When she calved she had a very large, hard caked udder. She does not give as much milk out of it as she ought to. I have been rubbing her udder with grease. It has been six days since she calved. Her udder does not seem sore. Do you think she was that way before I bought her, and if so, can I obtain damage? What treatment would you prescribe?

We are unable to say whether or not the cow was affected before you bought her, but you might take the matter up with the seller. He may make amends, but there seems to be no legal grounds for requiring him to do so. Foment the udder with hot water three times a day and massage thoroughly each time. At night rub in warm, melted lard. Keep her in a box stall, out of drafts. Possibly she may do better if you give her a full dose of epsom salts.

ABORTION.

I have an Angus cow five years old and weighing about 1,300 pounds that was due to calve in May, but lost her calf some time the first of February. (1) What do you think caused her to lose it? (2) In what way is abortion contagious and will any kind of a cow or heifer get it. (3) Is there any cure or treatment for this? (4) Is there any danger of spreading it by breeding the affected cow to the same bull to which other cows are bred?

These questions have been dealt with many a time in this department of the paper. (1) We cannot say what caused abortion, but contagion always is to be expected. (2) When cow after cow and heifers in turn abort without known cause contagious abortion certainly is present. Affected cows have an abnormal discharge from vagina and lining of vagina may show unnatural color and spots. (3) No specific remedy has been found for contagious abortion and an affected cow usually aborts more than once. (4) The bull is a common source of infection, as he spreads the disease in the way suggested. Isolate affected cows and do not have them bred again sooner than six months from time of aborting. Disinfect sheath of bull before and after each service by syringing with a luke warm 1 per cent solution of coal tar disinfectant. Disinfect rear parts of each pregnant cow with a like solution once daily throughout pregnancy.

DISEASED EYES.

Last fall I began throwing some green corn and fodder over the fence to sheep and about November some of them began to water at one eye and then in a few days the other eye. I have a flock of forty and one or two have been affected all winter, now six have it in one eye and one five-year-old ewe is totally blind. Their eyes water and turn white, then become inflamed. They are fed good, bright fodder once a day with corn and timothy hay and alsike clover hay to run to and some alfalfa hay. They are in fine shape otherwise.

The disease is contagious ophthalmia. Isolate affected sheep at once and if possible change the other sheep into clean pens and yards. Wash affected eyes once or twice daily with a 10 per cent solution of boric acid applied on clean swabs of absorbent cotton and two or three times a week dust eyeballs with a mixture of equal parts of finely powdered boric acid and calomel. The blind sheep is beyond hope. There is no need of feeding sheep two kinds of salt.

NAVEL INFECTION.

Please advise what causes navel dis-

ease in colts, prevention of same and a cure, if possible.

Filth germs getting onto the raw navel cord at birth cause abscesses at the navel and then in the joints (pyamela). The affected points become swollen, hot, sore and soft. The foal loses appetite, weakens and dies. This disease may easily be prevented by having the mare foal in a clean disinfected and whitewashed box stall on the floor of which clean bedding has been spread and then wetting the navel at birth with a 1-500 solution of corrosive sublimate. Repeat the treatment twice daily until the cord dries up and no raw spot is seen. Treatment rarely succeeds when the disease appears. Hypodermic injections of anti-streptococcic serum may be given.

WEAK STIFLE.

A black colt foaled last May has a hard lump in front of his left stifle joint. When he walks it flies back and forth and makes a popping sound. He limps when he runs, but not when walking. He has been this way about two months.

Keep the colt tied up short in stall for at least one month and blister the weak stifle with cerate of cantharides. Repeat the blister in three or four weeks if found necessary. If the condition was due to infection of the navel at birth, chances of recovery are poor.

EWES DYING.

Can you tell me what to do for my sheep, as I am losing them. They have been running in the cornstalks and a timothy and clover meadow, but after they began dying I changed them to a blue-grass pasture and am now feeding them wheat, bran and oats, together with clover hay and stock food. They are all heavy with lamb and fat enough for market. At first they get stiff and lose their appetite and the nose runs. Toward the last they breathe very fast.

Such losses are common at this time of year and the cause is overfeeding on coarse, bulky, constipating feed. Pregnant ewes should always be kept out of stalk fields and should not be fed timothy hay, marsh hay or old, weathered cornstalks. Feed mixed clover hay, roots, whole oats and bran. Silage may be used if roots cannot be provided. Abundant exercise must be enforced. Give the rations suggested here and physic any ewe that is costive. Liver disease and nodular disease of the intestines commonly is present in such cases and the combination proves fatal.

THUMPS.

I have nine brood sows farrowing seventy-three pigs between January 20th and this date. Out of this number only twenty-three are alive. They do very well until one or two weeks old, when they are suddenly stricken, beginning by slight jerks of the head and neck, which rapidly grows worse, drawing the head farther back until death comes, which is usually less than twenty-four hours. In some cases I have noticed small sores on nose and around eyes. Pens are kept clean and warm as possible at all times.

Overfeeding and lack of exercise, as regards both sows and pigs, causes thumps and infection causes the sores. At once cut down the rich rations of the pregnant sows and make them take abundant exercise every day. Do not feed corn. Prefer roots, alfalfa hay and very light slop. Make the pigs take plenty of exercise. Make slop of nursing sows laxative and not rich. Clean up, disinfect and whitewash pens and houses. Ventilate properly. To prevent sores souse heads of little pigs in a warm solution of one ounce of permanganate of potash to the gallon of water at first sign of trouble. Wash faces of pigs at birth with a 1 per cent solution of coal tar dip. Isolate all affected pigs.

The Development of Draft Foals.

THE development of draft foals might very properly begin with the selection of the sires and dams. The type that is the most pleasing to the breeder should be decided upon and all foundation stock should be selected from that type only, for no good results come from a cross of types any more than good results come from a cross of breeds. Size and soundness, together with as much quality as can be had with size, might be considered the main points in the selection and then the handling and care of those selected is the next step in the development of the foal.

Early development is an impossibility unless the foal is endowed with a rugged constitution and its proper strength, conditions that are governed by the care given the mother during her gestation period. In instances when it is necessary to work the mare or if the mare must be used regularly, no ill results need be anticipated if care is taken that she is never overwrought or subjected to sudden strain. If so handled, there is no reason why the mare could not work steadily until within at least ten days of her foaling time. On the other hand, if the mare is not used, the best plan is to allow her to run out all year on as good a pasture as can be had for her, providing that she has access at all times to a good stable or shed or any shelter that affords a good dry bed. Start the mare into the winter in good flesh, as she will withstand the cold and storms much better, require less feed and can give more nourishment to the colt than she could do were she in rather poor condition in early or midwinter. Have the mare in only moderate flesh at foaling time, as stabling, heavy feeding and excessive flesh will not produce a foal with as much size and vigor as it should have. An abundance of good timothy hay with a little sprinkling of clover in it and a few ears of corn whenever necessary makes the best winter feed. Also provide plenty of fresh water and see that the mare is never compelled to drink of that which is ice cold. A good blue-grass pasture is the proper place for the mare immediately after foaling as there is no better cooling feed, and the mare and colt will take whatever exercise they want.

Most mares can go through the actual work of foaling without assistance, but they should be gone to at intervals to make certain that there is no prolonged labor which is very telling on the mare and in most cases is fatal to the foal. The colt should be received upon good, fresh bedding if the mare is kept stabled, but if the weather will permit it is much better to have it foaled in the

Make Your Farm and Dairy Disease Proof

We'll Show You How and Send You This Big Bottle of B-K FREE

We are going to place a large, free sample (bottle) of B-K, the wonderful new disease exterminator in the hands of the first 10,000 farmers who fill out the coupon below and mail it to us AT ONCE.

With this powerful weapon at hand you can make and keep your farm and dairy DISEASE PROOF—you can fight off Tuberculosis, Hog Cholera, Calf Cholera, Contagious Abortion—in fact all of the destructive and profit-robbing germ diseases that attack and destroy farm animals.

These destructive plagues are GERM DISEASES and the only way to conquer and prevent them is to "Kill the Germs." That is exactly what B-K does. This wonderful new discovery has no known equal as a germ killer.

In laboratory tests, one drop of B-K placed in 5 tablespoonsful of water killed the Hog Cholera germ instantly. One drop in 6 tablespoonsful of water destroyed the Typhoid germ and so on throughout the entire list of contagious diseases.

10 times as Powerful as Carbolic Acid as a Germ Destroyer, but Non-poisonous to Human and Animal Life.

B-K Bacili-Kil Trade Mark

Destroys Germs and Prevents Disease. Purifies, Disinfects, Removes Odors. Indispensable on the Farm, in the Dairy and Home.

B-K is especially valuable to farmers and stock raisers because it destroys all forms of disease breeding germs, and quickly rids all farm animals of worms. Read the following letter. It is a sample of hundreds we have received

We are surprised and gratified to be able to report so soon that our herd of about 275 hogs which were badly afflicted and dying with Swine Plague are completely recovered, through the use of your Bacili-Kil Sterilizing Method. We began treatment according to directions about three weeks ago. All are now well, strong and on their feed and gaining back their flesh. K. J. Schultz, Supt., Tilden Farms, Delavan, Wis.

For cleaning up and purifying the stables, cattle and dairy, for reducing bacterial count, purifying and removing foul odors from milk cans, cream separators, milking machines, sinks, refrigerators, churns—also for garbage cans, swill barrels, drain pipes, water closets, outhouses, etc., it is especially valuable.

Trial Bottle FREE

Just fill out the coupon at right and mail it to us at once. Send no money. We will send you a free full bottle of B-K (Bacili-Kil) so you can see for yourself how it will make your farm PROOF against disease—how it will stop your losses—and PROTECT your home and family. Fill out the coupon. Send it now,—lest you forget. (2)

Healthy, Vigorous Farm Horses

ABSORBINE

Prevents fatigue, stops pain and lameness, reduces swellings and inflammation, strengthens the muscles and ligaments and keeps out soreness.

No matter what his breeding, a farm horse cannot do good work while he is suffering from lameness, swollen glands or other trouble. You can make a crippled horse work, but you can get no more out of him than he has to give you. He will not go through the day with the strong, heavy stride that means dollars ahead of the plow when his body is tortured by the many ailments that Absorbine will remove.

Absorbine does not blister or remove the hair and horse can be worked.

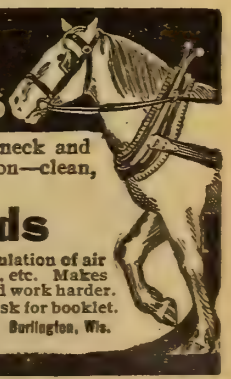
Absorbine is a mild, pleasant liniment to use—it is healing, soothing and invigorating and a positive Antiseptic and Germicide.

USE ABSORBINE to remove Bursal Enlargements, Bog Spavins, Thoroughpins, Puffs, Shoe Boils, Capped Hocks, Swollen, Painful Swellings and affections; to cure any strain or lameness; to repair strained, ruptured tendons, ligaments or muscles; to strengthen any part that needs it. You can buy Absorbine at regular dealers, price $2.00 per bottle or sent to you, express prepaid with full instructions. Write me about any case on which you would like advice. Horse book 2A free. Manufactured only by

W. F. YOUNG, P. D. F., 391 TEMPLE STREET, SPRINGFIELD, MASS.

Ventiplex Pad

Prevent Sore Shoulders



Ventiplex Pads keep the horse's neck and shoulders in good healthy condition—clean, dry and free from irritation.

Ventiplex Pads

are made of our porous, patent Ventiplex fabric. Permits a free circulation of air and absorbs all sweat and moisture. Prevents sores, galls, rubbing, etc. Makes the horse more willing to throw his weight into the collar—to pull and work harder.

See Ventiplex Pads at your dealer's. If he hasn't them, write us. Ask for booklet.

BURLINGTON BLANKET COMPANY Makers of the famous "Stay-on" Blanket Dept. 17 Burlington, Wis.
Canadian Address—Windsor, Ont.

IMPROVE YOUR STOCK

It Pays to Clip

Horses, Mules and Cows. They are healthier and render better service. When the heavy coat that holds the wet sweat and dirt is removed, they are more easily kept clean, look better, get more good from their feed and are better in every way. Don't buy anything but

The Stewart Ball-Bearing Clipping Machine

—the only machine that turns easy, clips fast and close and stays sharp. Its gears are all file hard and cut from solid steel bar. They are enclosed, protected and run in oil; little friction, little wear. Has six feet new style easy running flexible shaft and celebrated Stewart single tension clipping head, highest grade. **PRICE $7.50**

Get one from your dealer or send $2 and we will ship C.O.D. for balance. Money and transportation charges back if not satisfied.

MAKE MORE WOOL MONEY

You will get more wool from your sheep—longer and better wool, that will bring the highest price from buyers if you shear with a

Stewart No. 9 Ball Bearing Shearing Machine

This is, without question, the most perfect hand operated shearing machine ever devised. Has ball bearings in every part where friction or wear occurs. Has a ball-bearing shearing head of the latest improved Stewart pattern. Complete, including 4 combs and 4 cutters of the celebrated Stewart quality **PRICE $11.50**

Get one from your dealer, or send $2.00 and we will ship C.O.D. for balance. Money and transportation charges back if not pleased.

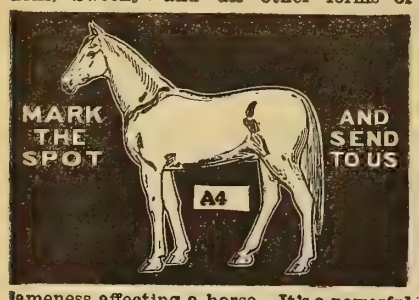
Cures Lame Horses

Makes Limping, Idle Horses Sound of Limb and Valuable Pullers.

We absolutely guarantee Mack's $1,000 Spavin Remedy to cure Bone or Bog Spavin, Ringbone, Thoroughpin, Curb, Capped Hock, Shoe Boil, Sprung Knee, Lacerated and Ruptured Tendons, Sweeny and all other forms of



lameness affecting a horse. It's a powerful remedy that goes right to the bottom of the trouble and cures the lameness in just a few days while the horse is being worked as usual. Contains nothing that can injure the horse and heals without leaving scar, blemish or loss of hair. We have deposited $1,000 in a local bank which must be forfeited if we fail to do as we say.

If you are not absolutely sure what causes the lameness, mark with an "X" on horse above where lameness occurs, tell how it affects the gait and give age of horse, and send to us. Our expert graduate veterinarian will tell you what it is and how to cure it.

Your druggist will obtain Mack's $1,000 Spavin Remedy for you if you ask him. If for any reason you can't get it, write us. We will see that you are supplied. Ask for instructive free book "Horse Sense" No. 3.

McKallor Drug Co., Binghamton, N. Y.

Traub's Sanitary Collar Pad

SEE that pad resting in the hollow of the shoulder; the old-fashioned pad does not fit the collar to the neck. Traub's sanitary collar pad fits snugly to the collar bone, thus distributing the draft equally. It is filled with granulated cork and will not get hard. It is the lightest and coolest pad made. It will prevent sore shoulders and sweeny. Don't fail to write for circulars explaining this wonderful invention at once.

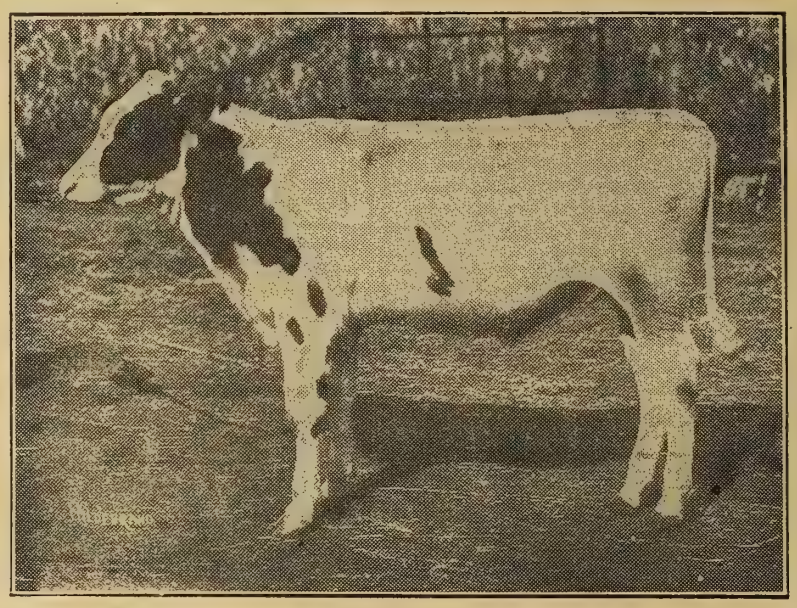
Traub's Sanitary Collar Pad Co., Mackinaw, Ill.

pasture, thereby doing away with much of the necessity for disinfection as a preventive of navel trouble.

Filth, as a breeding place for disease germs, is a scarce article in a pasture and although disinfection is a proper precaution in any circumstance, and should by all means be used on each colt foaled in a stable, the natural destruction of these germs is accomplished by the sun and earth until navel disinfection on a colt that is foaled in a pasture, resolves itself into a matter of choice rather than necessity.

Impaction of the bowels is a much more common ailment usually experienced until the colt is three or four days old. Plenty of exercise, while not a cure is in most instances an excellent preventive while there are a number of remedies, one of the most common being injections of soap-suds and warm water. Care should be taken not to physic the colt too strongly as it is an easy matter by so doing to arrive at the other extreme which occurs often enough from the sixth to the tenth day and is caused by the mother's milk not being at its best as she is frequently in a feverish condition at that time. Two-ounce doses of boiled milk together with enough scorched flour to barely thicken same should be given about every two hours until there is a noticeable turn for the better.

It sometimes happens that the mare's milk is insufficient, in which case if she does not respond to milk-producing feeds or if her milk is unfit it is necessary to provide a substitute.



The above illustration is a likeness of Buffalo Pieter Doede 94018, first-prize junior Holstein bull calf at the National Dairy Show. Also first and junior champion at the Iowa Dairy Cattle Congress, 1912. He is owned by the Chicago Stock Farm, Buffalo Center, Iowa. See advertisement elsewhere.

One of the best methods is to take cow's milk that is very deficient in butter fat and to one-half tea cup of this milk, add one-half teaspoonful granulated sugar and two teaspoonfuls of lime water and give every hour for the first few days after which the intervals may be lengthened according to its needs. Always use the milk from the same cow, give it at the same temperature and be sure that it never has all that it will take at any one time.

There is quite a variation in the age at which colts begin to eat grain, some commencing at three weeks and others not until six or eight. However, at about the age of from three to four weeks, place a little temptation in the feed box, two parts crushed oats and one part bran. Keep feed before it all the time and let it eat all it will. The colt should be feeding well at from two to three months after which time the feed should be changed somewhat. The bran should be cut down and more oats fed, together with a good grade of alfalfa meal if it can be had at a reasonable figure. The proportion of this mixture should be by weight, four parts oats, one and one-half parts bran, and one and one-half parts alfalfa meal. The oats are much better if they are crushed and no part of the feed should be the least bit musty and it might be well to give especial attention to the alfalfa meal as oftentimes it is not made from the best grade of hay. A small handful of salt and linseed oilmeal, half and half, should be given with the grain at least once every other day and in case the colt proves to be a dainty feeder, the addition of enough low-grade brown sugar to barely sweeten the feed will cause it to eat more and develop a better appetite. Hay need not be fed u less the colt is stabled from the flies and heat, in which case good, bright clover with a slight sprinkling of timothy is the best. Alfalfa makes an excellent hay, but until it is produced on the same farm or can be had at a cost of not to exceed $18 to $20 per ton, it is too high priced for the results it brings when compared with clover at $14 or less per ton. The colt should run on good, green pasture with the mother who should be fed milk-producing feeds as there is no one method of early development superior to that afforded by nature. There should be a small pen so constructed as to allow the colt to go in and out at will and yet keep the mother out. This pen should be built wherever it is convenient to carry the feed, which should be in a trough before the colt at any time that it might wish to eat. I have never seen or heard tell of a colt that injured itself by eating too much wholesome feed while kept on pasture with the dam. The amount and proportion of all the feed given must be governed by the eye of the feeder and changed whenever necessary as no set rule can be followed and get best results.

The actual weaning is usually a gradual process and should be such usually, but no bad results need be anticipated from an abrupt change if the colt is feeding well at the time. One of the best methods is to halter the colt and tie it by the side of its mother and let it stand for several hours at a time after which turn it in an adjoining stable for its exercise or if convenient, tie it to the mare's halter and lead them around a little. In this manner the colt will get its exercise and at the same time will be learning to lead. A few days of this kind of care will usually suffice after which the mare who is usually dried off, should be placed where the colt can neither see nor hear her. The colt must then be provided with more water and a little more salt added to the feed than usual. Make certain that there is no danger of the colt attempting to jump over a low door or fence or that it does not get its feet caught in the stable or fence should it happen to paw or strike into same. Do not be in too great a hurry for the colt to learn to lead. Get it accustomed to standing tied and there will be very little trouble to get it to lead up promptly. Let it get its exercise while so learning and be as quiet and gentle with it as possible as there is no time when a good disposition can be formed as well as now.

The feet should be trimmed occasionally to prevent crooked growth and a little care at the right time can often make a poor foot grow into a first-class one and it requires so little effort that it shouldn't be neglected. Observation and good judgment will tell one when and what the foot requires.

Colt development is a part of the horse business in which we are far behind, wonderfully so because of the fact that at either hand we see baby beef, early speed and especially the development of the imported yearlings and two years old. There can be no question but what our colts when foaled are as good as those foaled anywhere as the very best of animals are used here for foundation stock and until we can equal the skill of the foreign feeder and bring our horses forward as well developed, we are losing a very considerable additional profit that should be our own. —[Address by Don Robison before Illinois Live Stock Breeders' Association.

OUR LEGAL DEPARTMENT

THIS department is edited by a practicing lawyer who has had years of experience at the bar. He will give accurate and reliable answers to all legal questions when they are of sufficient importance to be of practical interest to any considerable number of our readers. Subscribers who desire questions answered in this department should base them upon a brief, plain, concise statement of the actual facts. To insure immediate attention inquiries should be addressed to "The Legal Department," in care of this paper; but as the inquiries sent are at times very numerous, thus delaying printed answers, those to whom it is important to receive an immediate reply by mail should remit $1.00, addressed as above.

LAW QUESTIONS CONSIDERED.

FIXTURES AND PERSONAL PROPERTY.

A Subscriber, Essex, Iowa.—A bought a farm from B. There are two self-feeders which have been on the place for several years. Each one is built on two 2x12 planks set on edge, and blocked up with wood blocks to a level. (1) Can B lawfully remove them when he gives possession, or do they belong to the place and go to A? (2) Do the hay rope and fork hanging on the track in the barn go with the place, or can B remove them?

Answer.—(1) It is a doubtful question whether the self feeders are fixtures or merely personal property belonging to B, but we are of the opinion that they are fixtures and go with the place, and should be left there when B gives possession. (2) The hay rope and fork are not fixtures, but merely personal property, which B has a right to remove when he gives possession of the place.

FORM FOR LAST WILL.

A Subscriber, Atlantic, Iowa.—Please give me a short form for a will, to be witnessed by a notary public, which will in case of my sudden death convey all my property, both real and personal, to my wife.

Answer.—A will witnessed by a notary public only, would not be valid. There must be two witnesses to a will. It is not necessary that either of them should be a notary. The following is a good short form for such a will as you desire to make:

I, John Doe, of the city of Atlantic, in the state of Iowa, considering the uncertainty of this life, and being of sound mind and memory, do hereby make and publish this, my last will and testament. I hereby give and bequeath to my beloved wife, Jane Doe, all my property, real, personal and mixed, wherever the same may be situated, and I appoint her the executrix of said will and desire that she shall not be required to give bond as such executrix.

In witness whereof I have hereunto set my hand and seal this, the second day of February, A. D. 1913.

John Doe.

The foregoing instrument was of the date hereof, by the said John Doe, sealed and published as and declared by him to be his last will and testament in the presence of us, and each of us, who at his request and in his presence, and in the presence of each other, have subscribed our names as witnesses thereto.

Richard Roe, Atlantic, Iowa.
John Jay, Atlantic, Iowa.

PERSONAL PROPERTY, NOT FIXTURES.

A Subscriber, Colfax, Iowa.—Last October A sold a farm to B on contract, making no reservation of anything. B paid $1,000 of the purchase price in cash and A agreed to give B possession of the farm on March 1, 1913. Previous to the sale A had hauled some fence posts and piled them up in a pile, intending to use them in building a certain string of fence, but when the farm was sold the posts were in a pile and nothing was said about them by either party. Can A lawfully remove the posts, or do they belong to B?

Answer.—The posts not being made into a fence, nor set in the ground at the time the farm was sold, are merely personal property belonging to A, which he has a right to remove at or before he gives possession of the farm.

DRAINAGE—LANDLORD AND TENANT.

Mr. John Beuck, Avoca, Iowa.—(1) I have five acres of low land, adjoining just as low owned by a neighbor. The land has no natural drainage. I have tile drained my five acres. Can I lawfully fill up surface along the partition fence to keep my neighbor's surface water from coming on my land? (2) Where land is rented for grass and pasture has the tenant a right to hull clover seed?

Answer.—(1) You can lawfuly fill up the surface on your own land, on your own side of the partition fence. (2) This question is very vague and indefinite. There could not possibly be any clover seed to hull on land that is pastured. Now as to grass land, if you mean that the tenant rented it for hay making, and he pays cash rent, he can hull the seed from the clover hay he raises, but if he is to pay as rent part of the clover hay raised, he cannot hull the seed from the part he pays or delivers as rent.

Chilled Disc Bearings.
Malleable Main Castings.
And Many Other Important Improvements.

One of the Best Investments You Can Make

Write Galloway for Full Description, Prices, Terms, Etc.

This Galloway Disc Grain Drill has been improved and developed until it now stands head and shoulders above any other Disc Drill in the world.

Has Stood Severest Tests

We have put this Drill to harder tests than it will ever be called on to stand in actual service. For years it has been used on the Galloway Bros.-Bowman big Canadian Farm and on William Galloway's Iowa Farm, doing actual work putting in a real crop.

That is the kind of test you can rely on because we crowded on to this drill more hard work in one season than a drill will get in ordinary use in four or five years. We wanted to bust the machine if we could and find if it had any weak points, but we found it so strong and durable that even the hardest work of the Northwest, where a drill must be built extra strong to stand up under the severe strain, will not affect it.

Our Guarantee and 30-Day Trial

We absolutely guarantee that these new Galloway drills are made of better material, have more exclusive and desirable features, are stronger and more durable and will stand up and give better service than any other line of disc drills ever made. We are perfectly willing for you to try one on your own place in any kind of soil, doing the hardest work you can put it to for 30 days. If at the end of that time you are not thoroughly satisfied that the machine is all we claim for it and by far the very best disc drill you ever saw, ship it back to us and we will refund every cent of your money and pay all freight charges.

Get the Big 144-Page Galloway Book of 1,000 Bargains

Full description of the Galloway Disc Drill Line is given in my Big Free 1913 Catalog showing everything for farm, home and family use. Hundreds of bargains that will save you real money. Don't fail to get your copy. Postal brings it Free.

A Pound of Crop
is worth a ton of theory

When the deep tilling theory *realizes* extra crops it ceases to be a theory and becomes a fact.

If you want to know the facts about deep tilling and the Spalding Deep Tilling Machine, read what these owners have *actually done* with it—see what they have proved for themselves and *for you.*

Then, write for the book which goes into details as applied to the kind of land *you own.*

What DEEP TILLERS Say:

Martin City, Mo., Jan. 18, 1913. I have plowed 150 acres in the Little Blue bottoms in Jackson county, Missouri, since the beginning of corn husking and I am plowing 14 to 18 inches deep and turning stalks under so completely and well that you would hardly know that it is a cornfield. In fact, this plow is doing the swellest job of plowing I have ever seen. I bought a farm in this Little Blue bottoms, consisting of 283 acres, 200 acres of which was as level as a floor and 100 acres of this farm is shown on the U. S. survey map as being Wabash clay (in plain words, the stickiest gumbo ever). This 100 acres had never been plowed since Columbus discovered America and was entirely covered with swamp willows. (I mean covered, too.) I took this Spalding Machine and $5,000 worth of the biggest mules I could buy, put 5 head on this plow at a time, working 5-hour shifts, put them into this 100 acres and the work this plow did was a wonder to know and see. It put this wilderness into a seed bed, the best you ever saw. I planted this in corn and husked from 80 to 90 bushels per acre and am now finishing plowing this field for the second time. I have completely reclaimed this land and it is worth to cultivate $200 per acre any place in the U. S. and I feel that no other plow could do this work and I know that I am $10,000 better off for having known of this machine and having bought it. I consider this machine the most wonderful and valuable piece of farm machinery in existence and its invention will do more for future farming than all the agricultural colleges in the United States. I am now figuring on buying a tract of 680 acres of ground that can be made to raise large crops with this plow applied, which otherwise will remain wild blue stem, for reason of expense of putting into condition.

J. H. Wallace.

THE SPALDING DEEP TILLING MACHINE

Spalding Dept. 68, GALE MFG. CO., Albion, Mich.

12-Gauge Hammerless "Pump" Guns

The Marlin hammerless 12-gauge repeating shotgun, Model 28, is a fine-appearing, beautifully-balanced gun, without any objectionable humps or bumps; no holes on top for gas to blow out through or water to get in; can't freeze up with rain, snow, or sleet; it's solid steel breech (not a shell of wood) permits a thoroughly symmetrical gun without sacrificing strength or safety; **it is the safest breech-loading shotgun ever built.**

It is **Hammerless** with **Solid Steel Breech** (inside as well as out)—**Solid Top—Side Ejection—Matted Barrel** (which costs $4.00 extra on other guns)—**Press Button Cartridge Release**—(to remove loaded cartridges quickly from magazine without working through action) **Double Extractors—Take-Down Feature—Trigger and Hammer Safety.** Handles rapidly; guaranteed in shooting ability; price standard **Grade "A" gun, $22.60.**

Send 3 stamps postage for big catalog describing No. 28 A, B, C, D, T and Trap Special and all other Marlin repeating rifles and shotguns. Do it now!

The Most Profitable Types of Beef Cattle to Feed.

By Prof. H. R. Smith, Minnesota Agricultural College.

YOU are all aware that there is now a shortage of beef which is reflected in market values higher than at any time in our history. With a population 20 per cent larger than a decade ago and with 20 per cent less beef steers in the country, according to the census reports, do we have any cause for surprise? In years past a great western range has been able to supply a large part of the cattle needed. Much of this land is now under the plow. During recent years high-priced corn has discouraged feeding to a considerable degree. Veal calves and young, growing cattle have been sent to the market in large numbers and have been slaughtered for beef. There are other things which have contributed to restrict the growth of the beef industry in the United States. It is true that existing high prices are favorable to the producer. None of us want a return of prices which were current twenty years ago. However, the price of beef is now so high that a large number of our people are unable to buy. There has been a growing tendency to substitute other foods for meat and the injury to the trade caused by period of exorbitant prices is likely to be more or less permanent. It would be very much better for all concerned if we would adopt methods of reducing the cost of producing beef rather than force a high price level by curtailing the supply.

There are two ways by which we can increase the supply of beef and at the same time increase our profits from feeding: (1) By breeding more cattle on our farms and increasing their efficiency. (2) By using more care and skill in the combining of foods so that more beef can be produced from a given quantity of grains and grasses grown. These are two great factors in economical production. I shall confine my remarks to the influence of the animal.

A demand for a certain manufactured article brings out a machine so designed and constructed as to produce that particular article and nothing else, and it does so with the greatest economy. The most intricate, mechanical device is simple in its construction in comparison with the animal organism—a machine which has required generations of breeding to bring it to that form and function which makes it possible to produce beef in the largest quantity and of the finest quality from the vegetation of the earth.

Cattle of today are of two general kinds—the improved and unimproved. In the former class we have those which produce beef and those which produce milk with the greatest efficiency. In the latter, the so-called "mongrel" or "scrub" which is adapted for neither. The former has been bred for a purpose, the latter has not.

The dairy cow is a factory from which the product is taken each day. The beef animal is both a factory and a store house. In the rapidity of production there is a great difference in beef animals. Even among pure-bred animals of the beef breeds we find some of large gaining capacity and some small. Registration papers show that there has been no admixture of foreign blood, but it happens that not all men engaged in raising pure-bred stock are capable of selecting for greater efficiency so there has not always been improvement during successive generations of breeding. It is true, however, that practically all the men who have succeeded as improvers of the bovine race have confined their efforts to pure-bred cattle and we, therefore, find a much larger proportion of profitable types among pure breds and high grades.

The test of efficiency as to the quality of beef produced has been the market. The cattle which bring the highest price per pound are those which yield the largest number of pounds of the best meat. The expert buyer who follows his purchases to the block can tell by the outward form about how much a car load of cattle will yield and he fixes the price accordingly. This has been our standard of quality and it has been for the most part accurate, but the profit to the farmer depends as much upon the number of pounds as the price per pound. It would seem, therefore, that we should give just as much attention to inherent gaining capacity. As a matter of fact, we have not. There has not been the same sure test of quantity as quality. Differences in size of individuals of equal age, fed under like conditions have been noted by feeders, but practically no effort has been made to learn why some are naturally better gainers than others.

It was my good fortune while at the Nebraska Experiment Station to have facilities for keeping individual records of food consumed and gains made on approximately 150 steers and part of these records were kept from birth to the block. The calves used in these experiments represented what might be called good beef types, dairy types and mongrels. Approximately half the calves used in the experiment were grade Short-horns, the remainder consisting of a few specimens of each of the following breeds: Herefords, Angus, Red Polls, Holsteins, Jerseys and Guernseys. A comparison was, therefore, made of the feeding capacity of steers which represented different types within a given breed. Each calf was fed in a stall by himself and every pound of milk, grain and hay which he consumed during his life was weighed and recorded. A record was also kept of the gains made by each individual at stated intervals. The calves were fed in groups of eight each, and in these groups there were placed representatives of the different breeds and types named. The calves of each group were fed in the same manner, so that whatever differences in gains were noted could be safely attributed to the individual and not to the feed and surroundings. All the feeding was done in a barn, but open lots were provided for exercise. Of course, no pasture was provided. In most of the groups the calves were confined to the same quantity of food. In other groups each steer was given all that he would consume. It was observed early in the life of these cattle that certain individuals could be induced to consume much more than other individuals and the gains were correspondingly larger. It was found, however, that the gains made were not always in proportion to food consumed as certain individ-

The above is a likeness of the great young bull, His Highness 338002, at the head of the Short-horn herd of A. C. Shallenberger, Alma, Neb. Many cows bred to this bull and others with calf at foot will be included in the sale that will be made from this herd on April 10th. Send for the catalog now and mention The Homestead when writing.

LOW FARES to CANADA

Settlers! Go to Canada via the Duluth-Ft. Frances Gateway or via St. Paul and Winnipeg, over the **Canadian Northern Railway.** Even if you have already selected your farm you have the advantage of traveling from 1550 to 2500 miles through Canada's richest farming country. **Tickets on sale every Tuesday March 11 to April 29, 1913.**

Just glance over these low rates—second-class, one-way fares for settlers. Tickets good for stop-over privileges.

Save Work and Worry

This weight test proves its perfection

Gamble Equalizers save you work and worry—save the strength of your horses by evening the pull.

Made for 3, 4 or 5 horses for all kinds of farm implements. They even the pull to within fraction of a pound. Give each horse its share of the pull—save strength of good pullers. Give bigger days work. Style of Equalizers shown here works 4 horses abreast—one in furrow, 3 on unplowed ground. For use on 16, 18 and 20 inch sulkies and 12 and 14 inch gang plows with cross clevis hitch.

Gamble Equalizers are Guaranteed to give perfect satisfaction and work as we say or **money refunded.** Guaranteed to give plenty of room—no side draft—no rubbing horses' legs with tugs. **Gamble Equalizers** are the original—they are the best. Fully protected by patents—no others like them. Get the **genuine Gamble Equalizers.** Made to last a life time. Cost so little you can't afford to be without them. Do not accept a substitute. If your Implement Dealer does not have them, send us his name—we will see you are supplied. Send for free illustrated catalog showing full line of Gamble Equalizers.

STAR MANUFACTURING CO., Dept. 1, Carpentersville, Ill.

Get My Price—FIRST

Freight Prepaid—30 Days' Free Trial

I want to quote you a price that will cause you to sit right up and take notice on the grandest, best plow that ever turned a furrow. I can do it because we are the *actual manufacturers,* and sell *direct to you.* We don't have traveling salesmen—don't sell to jobbers or dealers. You save those expenses and profits when you order direct from our factory. But that isn't all. You get a *better plow.* I say to you that the

MONMOUTH SULKY OR GANG PLOW

will prove easier for you to handle, easier on your horses and will do your work better than any plow you can buy, regardless of price. It's positively the only plow that actually carries the beams **on top** of the frame. No pressure on bottom of furrow—no friction. Single Bail and Horse Lift; and "Point First" action.

ALL SOLD DIRECT FROM FACTORY

FREIGHT PREPAID, SO YOU KNOW EXACTLY WHAT YOUR PLOW IS GOING TO COST YOU

I'll give you a chance to prove every statement I make, and we'll pay the "damages"—freight *both* ways—if we "fall down" in a single assertion. I want to tell you all about these plows and our other implements—Cultivators, Disc and Spike Tooth Harrows, Grain Drills, Mowers, Rakes, Farm Gates and other farm tools—all sold at factory prices. Satisfaction guaranteed. Just write a postal for our complete catalog. It's free. Write to me, **The Plow Man,** with

Lightest Draft Plow Made

Monmouth Plow Factory, 115 So. Main St. Monmouth, Ill.

uals made larger gains on the same amount of food consumed by others. In this capacity to make gains it seemed to be not so much a question of breed as type.

In these experiments it was found that the difference in gains between individuals of a certain breed was greater than the difference in gains between the breeds. For example, with the twenty-four grade Shorthorns in one experiment there was a range in daily gains from 1.01 pounds to 1.79 pounds per day. In one group a Short-horn showed the largest gain and a Short-horn next to the smallest. In another group a Hereford showed the largest gain and a Hereford the smallest. Some of the dairy-bred steers proved to be excellent gainers and were in numerous instances near the top of their respective groups. This was especially true of the Holstein steers. The steers of the Jersey and Guernsey breeds seemed to make in some instances very satisfactory gains up to a certain age.

Referring again to the grade Short-horns used in the experiment it was found that some of the individuals which would be called inferior made gains equal to the good types. This was more especially true of that class which might be called rough and more or less rangy. In the last experiment, however, the average gain made by all the steers which were more or less wide and compact in build made slightly larger gains than the more rangy types. The great difference, however, in favor of the more blocky and compact type was found in the fact that they fatten more rapidly and become riper for market at an early age. This is a distinct advantage from the feeder's standpoint.

Careful measurements were taken of all individuals to show size of heart girth, middle girth, rear girth, width of chest, depth of chest, height from the ground, etc. The one measurement which seemed to be more closely associated with gains was the size of the middle girth. It would seem that steers must have plenty of depth and width of barrel to give room for the organs of digestion. Slender bodies were not associated with large gains in these experiments.

As previously stated, while the dairy-bred steers made satisfactory gains in many instances, they did not sell with the better bred steers at the close of the experiment at the same age, even though fed under the same conditions. The dairy-bred steers, more particularly the Holsteins, lacked covering, especially over the back where we get the higher-priced cuts of meat. This was also more or less true with the Jersey and Guernsey steers. They were also deficient in hind quarter. These deficiencies from the market standpoint were such as to cause the dairy-bred steers and the mongrels to undersell to a considerable degree the better-bred beef cattle, and it was in their selling value we found the greatest difference from the standpoint of profits.

The largest profit ($24.43) over and above the cost of feed was made by a well-bred Short-horn steer, No. 18. The next largest profit ($23.99) was made by a well-bred Hereford, the third largest gain ($23.56) was made by a Short-horn steer, No. 27, and the fourth largest gain ($21.14) by a Hereford steer, No. 47. The poorest showing was made by a Jersey steer, No. 47, which lost $4.52 during two experiments. The second poorest showing was made by a Red Poll steer which lost $6.09 during three experiments. The third poorest showing was made by an inferior steer with no particular breeding, but one which showed some Short-horn blood. This steer made a total profit of $4.90. Next to him was a Holstein, No. 75, which made a profit of $6.42 over and above the cost of feed in each case.

The results as a whole emphasize the importance of breeding in beef cattle. While it is frequently more profitable to buy the more common feeders if they can be had at a low figure, it never pays to breed them. It is the one who breeds such cattle that is the real loser. The question of type in beef cattle is a most important one. Every effort should be made to learn what type make the largest gains and what type brings the largest price per pound. The model type is the one which combines both gaining capacity and one which has a conformation which yields a carcass that brings the largest price on the market. Let us hope that much progress will be made in breeding these types and encouraging their use in our feed lots.—[Address before International Association in Chicago.

GROWING STRAWBERRIES.

To the Editor of The Homestead:

A Kansas subscriber inquires about berry growing. She asks what to do with the runners, how to protect in winter and how long a bed will last to profitably produce fruit. She calls for someone who has had experience to tell what they have learned. This writer has had experience, and can tell the inquirer exactly what to do about it, and what to expect.

A bed of berries will yield two good crops. Planted in the spring of 1913, they will yield bountifully in 1914 and 1915, and should then be replaced, or it is possible to so renovate the bed as to secure good crops for a few years more. The manner of culture will depend somewhat upon the variety planted. If you set a general cropper like Dunlap, plant eighteen by thirty-six inches, your best plan is to let the runners grow and by turning them parallel with the rows you will have in the fall what is called matted row. But if you plant a non-running variety like the Heritage set them closer, rows thirty inches apart, and plants twelve inches in the row, then by cutting all runners you will have heavy crowns and a fine prospect of fruit upon the hill system.

The difference in results would likely be this, more quarts of berries by the matted row plan, larger berries by the hill plan. Without any doubt you can succeed in berry growing, and it is very doubtful if there is any way of using a town lot more profitably. A space 50x75 feet will if given good care yield from 750 to 1,000 quarts of fruit. At a shilling per box this will approximate $100.

The matter of protection in winter is one of importance. The purpose of protection is to keep the plants in a frozen condition. It is the changes of the winter season which injures the plants, the alternate freezing and thawing.

The manner of winter protection is by mulching. Apply a coating of some refuse, hay, straw, leaves, cornstalks, bagasse, or evergreen boughs. Let it be two inches thick, enough so that all the leaves are covered. This will hold the frost when the bed is once frozen. And even if not frozen the plants will be protected from the sun and wind.

If you try the matted row system, after two years you will find the rows getting too wide, and weeds of all kinds creeping in to the injury of your prospects. Indeed it is likely that by this time all the ground is covered with plants. In that case have two-thirds of them plowed under. So plow as to turn under all the old rows, but leave a space just as much as the old rows, in the center of the row spaces. Weed these new beds out by hand carefully, and after this is done harrow the whole patch. It should be said that before you plow the patch should be moved off, and all the rakings gathered and burned. Then after the plowing and weeding is done harrow vigorously. It may appear to you at first that nothing is left, but never fear, in a little time new leaves will appear, and you will have bright, fresh rows coming on vigorously for next year.

If this work is done thoroughly and done at the right time, it will be successful. The right time is immediately after the crop is gathered. Do the renovating act promptly. The very day after the last quart of berries is gathered mow, rake and plow. You will lose money by every moment of delay. The new rows will need every hour of the remaining season of growth to perfect their fruit buds, gathering strength and vigor, for the new season of effort.

In no other garden work, no other crop grown, is it more important to do the necessary work, at just the right time, than it is with the strawberry. And it is also true of the weeding, and cultivating. Do it promptly and let not one day pass when the work is due. H.

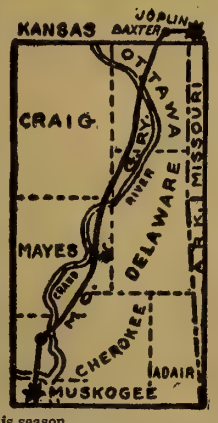
NEW LAND

NEW TOWNS ALONG THE NEW

M.O.&G.RY.

IN OKLAHOMA

A million acres in the five northeastern counties of Oklahoma have remained unsettled because the nearest railroad was 10 to 35 miles away. The new northern extension of the Missouri, Oklahoma & Gulf Ry. from Muskogee to Joplin, Mo., 130 miles in length and running for a distance of 90 miles through the rich valley of the Grand River, is now completed through this section and both passenger and freight trains are being operated. New towns are being built and thousands of farms will be put in cultivation this season.



COST Land in Cherokee, Delaware, Mayes, Ottowa and Craig counties is to be had at $35 o $50 per acre which will soon advance in proportion to the older settled counties.

CROPS All kinds of live stock and grain farming is adapted to this section. All grains and grasses, and all live stock which is grown in Iowa, Missouri and Kansas is successfully produced here.

RAINFALL This part of Oklahoma is in the 40-inch rainfall belt and has an abundance of pure water for both household and stock. The climate is mild and pleasant, being just between the cold North and the southern heat.

This railroad has no land to sell. We simply furnish reliable information concerning land and new towns tributary to our road to prospective settlers. This is a proposition you should not overlook. Write today to

H. L. TRABER, Gen. Pas. Agt.,
M. O. & Gulf Railway,
MUSKOGEE, OKLAHOMA

Southern Farm Facts

Land at $10 an acre up

Alfalfa makes 4 to 6 tons per acre; Corn 60 to 100 bu. All hay crops yield heavily. Beef and Pork produced at 3 to 4 cents per lb.—Apples pay $100 to $500 an acre; Truck crops $100 to $400; other yields in proportion.

THE SOUTHERN RAILWAY
Mobile & Ohio R.R. or Ga. So. & Fla. Ry. will help you find a home in this land of opportunity. Booklets and other facts—free.

AGENTS WANTED

WILL make a very attractive proposition to agents. I have a splendid assortment of land in Minnesota, North Dakota and Montana. Write me. My proposition includes a liberal commission for selling. Address

D. J. McMAHON,
818 Commerce Bldg., St. Paul, Minn.

AUCTIONEERS

LET us sell your farm and other real estate at auction. We are making successful sales for others. CAREY M. JONES & CO., Auctioneers, 2856 Washington Blvd., Chicago, Illinois.

MINNESOTA has a home for you. Good land at low prices. Literature giving information about soil, climate, price of land, etc., sent free on application to H. J. Maxfield, Commissioner of Immigration, Room 208, State Capitol, St. Paul, Minn.

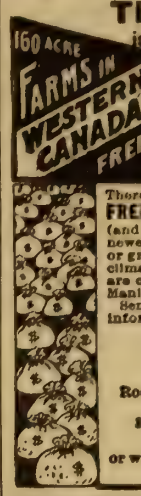
Mrs. Farmer Have your husband write for our free literature on choice Northern Minnesota lands near Duluth. Land Commissioner D. & I. R., R. R., 116 Wolvin Building, Duluth, Minnesota.

CENTRAL MISSOURI. Write for list of corn, wheat, clover and blue grass farms, described and priced, that will prove profitable and satisfactory for homes. Mild, healthful climate. Hamilton & Crenshaw, Box 3, Fulton, Missouri.

ALBERTA

The Price of Beef

is High and so is the Price of Cattle.



For years the Province of ALBERTA, (Western Canada) was a Big Ranching Country. Many of these ranches today are immense grain fields and the cattle have given place to the cultivation of wheat, oats, barley and flax, the change has made many thousands of Americans settled on these plains, wealthy, but has increased the price of live stock.

There is splendid opportunity now to get a **FREE HOMESTEAD OF 160 ACRES** (and another as a pre-emption) in the newer districts and produce either cattle or grain. The crops are always good, the climate is excellent, schools and churches are convenient and markets splendid in Manitoba, Saskatchewan or Alberta.

SOUTHERN MINNESOTA LAND BARGAINS.

I HAVE a finely improved farm of 280 acres, two miles from good town, only 18 miles north of Iowa line, at $55.00 per acre. $2,500 cash will handle this fine farm—and it certainly is a fine one. Also have a fine farm of 320 acres at $70 per acre, and one of 400 acres at $75.00 per acre. Any one of these are worthy of your consideration.

11 sections of selected prairie land in Lincoln county, Colorado, at $9.50 per acre. This tract will make a fine colonization proposition.

18 sections in Billings county, North Dakota, in a very fine stock ranch with good buildings. Northern Pacific Railroad runs through the land. Will sell at $5.00 per acre. Small cash payment. Balance to suit at 6%. The coal alone on this land is worth many times more than the sale price of ranch.

In Wisconsin I have some very fine cut-over lands that are suitable for dairying. Finest water in the world. Greatest tame grass country in the United States. Lands are near markets and will sell at $7.50 to $10.00 per acre, upon your own terms. A small cash payment will secure you one of these tracts. Write for information concerning any locality you may be interested in. Geo. R. Slocum, 601 Pioneer Building, St. Paul, Minnesota.

The Pea Fed Hog's Home

I OWN a few farms I want to close out near Romeo, the best district of the famous San Luis Valley, where hogs are raised at the rate of 300 to the quarter section and at a cost much less than in the corn belt Sure water for growing crops. Abundant yields of small grain. Alfalfa, potatoes, small fruit and other crops do well here. The country is well established. Good school and church accommodations. Most of the farms I have are improved ready for occupancy, and will increase in value yearly.

ROMEO SAN LUIS VALLEY COLORADO

Zeph. Chas. Felt - Romeo, Colorado.

2 UNION County, Iowa, 80 a. farms for sale at $125 each; good 7 room houses, good barn, granary, well, wind mill and other outbuildings; one 5 miles from Creston, the county seat; one 3 miles west of Shannon City.

160 acres S. E. of Redfield, 2½ miles in Dallas Co. House, barn, granary and well with windmill. Improvements run down. This is a snap, $65. A good stock farm for someone.

200 acres, Wayne Co., 2½ miles from a new town on C. & R. I. extention Des Moines to Allerton, near the Lucas county line, south of Chariton, at $30 a. Any of the above farms on any reasonable terms. **E. E. Girton,** 605 Crocker Bldg., Des Moines, Ia.

WE WANT YOU to know about the greatest section in the irrigated West. Richer soil cannot be found anywhere; climatic conditions, railroads, churches and educational facilities are the best; in fact this is a section possessing all the advantages of a populated community and none of the hardships of recently reclaimed districts. Here is opportunity for the farmer, dairyman, orchardist and investor. Write for literature that will open your eyes to a great and growing country. Mountain Home Co-operative Irrigation Co., Mountain Home, Idaho.

SPLENDID OPPORTUNITY

FULLY improved and equipped Manitoba farm for sale containing 1,200 acres; 500 ready for crop. 200 with river frontage. Ten-roomed house, barn forty by seventy; every thing first class. Near city of Brandon. Will stand strictest inspection. Owner retiring. $40 per acre; easy terms. For full particulars write **A. D. CAMPBELL, 637 Furby St., Winnipeg, Manitoba, Canada.**

LANDOLOGY FREE

A magazine giving the FACTS in regard to the land situation. 3 months' trial subscription. If for a home or investment you are thinking of buying good farm land, simply write me a letter marking it *"Personal"* and say *"Mail Landology and all particulars free."*

Address: **LLOYD M. SKINNER, Gen. Mgr.**

Fattening Steers With Little Corn.

By George H. Dacy.

FOR many years English stockmen have been annually fattening good quality steers that were the equal of American corn-fed beeves without using any corn in the ration of these animals. Last year we passed through an era of expensive corn and many feeders temporarily were forced out of the business on account of the high price of corn. Throughout the corn-belt states corn and cottonseed meal are the major nutrients that are employed in finishing the beeves to the desirable market bloom. However on the outskirts of the corn belt where corn is neither so plentiful nor so cheap it is necessary to utilize less costly grains in developing the majority of the gains on the beeves.

The utilization of farm wastes and by-products for steer and hog feeding is to be highly recommended where these materials are rich in carbohydrates that are necessary for fleshing up the steers for market. Of course nothing but wholesome grain and roughage should be fed. The practice of feeding badly damaged feed that is not fit to be placed before the animals is to be condemned. The rice farmers of Arkansas convert their rice that either cannot be harvested or that is not up to market requirements after it is harvested into profitable beef and pork. All of them practice the method of grazing steers or hogs in their stubble rice fields after the threshing operations have been completed. The stock rustle a good living from the rice that otherwise would go to waste. Where a portion of a field of rice is not up to the standard quality of the whole crop the owner often will fence off the inferior part of the crop and then he will liberate either hogs or steers in the field to harvest the crop. Steers and hogs both wax fat on the rice and rapidly attain the wished for blockiness and fullness of conformation that typify the fat animal.

Country men who live outside of the rice belt utilize blue-grass pasturage to maximum advantage in developing beef of good quality and marbling. Many successful feeders turn their steers directly from the blue grass onto the market at profitable returns. The production of grass-fed beeves is one of the easiest and most profitable modes of stock farming. The minimum of care and attention in catering to the needs of the animals is necessary. During a dry summer it is occasionally necessary to feed green corn as a soiling crop to these beeves. In some instances it pays the feeder to supply the beeves with ear corn in a dry lot for several weeks before they are placed on the market, but ordinarily this extra work is not necessary.

Many country men have tried to substitute other grains for corn in the fattening diet of the steers. Many grain growers have come to appreciate that much of their grain that is "off grade" could more profitably be converted into beef on their home farms than to sell it at cut rates on the market. Formerly the cattle of the northwestern states were shipped to the corn belt to be finished for market. At present a large number of these animals are being directly fattened at home and sold on the St. Paul market. Straw that was formerly burned is now being used as a roughage for the winter feeding of these steers. Such a practice makes possible the saving of about 20,000,000 tons of straw per year in the two Dakotas alone.

As an illustration of the practical use of other feeds than corn in the fattening ration it is only necessary to mention the results of an experiment conducted at the North Dakota Agricultural College. Barley, wheat, oats and emmer are grown extensively in this state in addition to corn. Varieties of corn that have been acclimated to local conditions yield as high as fifty-five and sixty bushels to the acre. As yet little of the corn is cured and husked for market as the demand for ear corn is relatively slack. The custom is to feed the corn out in the bundle as this minimizes labor and waste. For a four-months' period seven grade Shorthorn steers were fed a ration of two parts of ground barley to one part of wheat bran supplemented by small amounts of corn fodder, and millet, wheat grass, and oat hay. The animals were fed in the open lot and allowed access to a shed for shelter. During the 132 days that these beeves were fed they made a daily gain of 2.14 pounds per animal, on the average each steer ate about 6.57 pounds of grain for each pound of gain in live weight that he showed. In the slaughter test the steers dressed an average of 62.4 per cent.

Various factors such as high-priced labor and the need of purchasing some of the feed caused the net profits from these beeves to be less than they would have been under ordinary farm conditions. The seven steers were purchased weighing 1,321 pounds per animal at three and one-half cents a pound while they were sold weighing 1,500 pounds apiece at 4.65 cents per pound. This left a net profit of $7.57 per steer when all the expenses for feed were deducted. The steers consumed 5.21 tons of barley, 1.61 tons of bran and roughage that was worth $25. This feeding trial indicates that the average daily gain was as high where ground barley and bran were used as where corn was

Galloway's Auto Transport

Farmers, Business Men and Pleasure Seekers! Here is Galloway's latest pet—his Auto Transport—so called because it will actually go through snow and mud and transport anything or anybody—anywhere—or any time—safely, cheaply, economically—and you can buy it at a price that was never equalled in the history of the auto business before and on terms so easy that you will hardly realize you are paying for it.

It Does the Work of Three Teams

Is Built for the Hardest Wear and is a Wonderful Convenience and Money Saver

With this rig you can do more work in one-half the time than three men and three teams can do in a day. It hits the nail right on the head and it is built for the hardest wear and tear It is guaranteed to give the best of service and satisfaction. Notice the size of the wheels, the large hubs, heavy, durable spokes and rims, axles strong and yet not too heavy, and wheels of just the happy medium—neither too high nor too low. You can put on the back seat and take your family to church or for a pleasure ride; you can haul your pigs, calves, sheep, milk, poultry, eggs and vegetables to market and be back home again before you could even reach town with a horse and wagon. Just think of the convenience of a rig of this kind When you want something from town in a hurry you can jump into this transport and you have got it before you know it You can go to town for your groceries, flour, feed, furniture, hardware, cement and lumber or anything you can think of and you can do it cheaper than you can drive a horse and wagon.

HOW I MAKE THE PRICE

There is only one way that I could make a price of $595 on a rig of this kind, and that is by making them in big quantities Remember this auto transport is no toy It is practical, durable and built of the best material that could possibly be used for the purpose intended, and will give you all the service and satisfaction any car could give you even though it cost you twice as much. Send for full description and my special introductory offer that will help you pay for the transport and make you money at the same time. Write me today and you will be mighty glad of it

ALFALFA

How you can grow it on your land
How to get "catch" first planting
How to select and prepare the soil
How to get more than average crops

These and hundreds of other questions that you want answered are clearly and distinctly covered in our new book just issued entitled "Alfalfa—Wonder Crop". This remarkable book contains a priceless fund of information about alfalfa growing, secured from many sources; United States Government, State Experiment Stations, the best posted authorities and successful growers. In simple language, easy to understand, it tells just the things that you want to know before you start to raise this greatest of all $cash money$ crops. This book will convince you that you have some land on your farm where you can profitably grow alfalfa. This information was secured at a great cost of time, money and research. It tells how to grow alfalfa, how to get results from first planting, how to select the field and prepare the soil. It tells all about fertilization, plowing, liming, preparing the seed, when to plant and how to plant. Tells what to do during the growing period, how to get bigger than average crops, and how to cut and cure. The contents of this book are worth many dollars to the farmer interested in growing alfalfa. This book is ordinarily sold for 25 cents but we will gladly send it without cost or obligation of any kind if you answer at once. Don't put it off—write for free book today.

MEAD CYCLE CO., Dept. W 184 CHICAGO

the principal feed in the fattening ration.

On account of the large quantities of wheat that annually are not marketable and in consequence are practically wasted a second test was carried out to determine the value of rejected wheat in the fattening ration. Two lots of grade steers of good quality were used in this experiment. These animals were wild range cattle and for the first month they were fed a little grain on scant pasturage in order to accustom them to grain. For the next two months they were fed on corn fodder. They were run in an open lot with access to water and a shed for shelter. Lot 1 was fed on a ration of three parts of ground, rejected wheat and one part of bran. After about two months it was necessary to reduce the bran content of the menu which was too laxative. Lot 2 were fed a diet of three parts of corn meal and one part of bran. Slough grass, millet, wheat grass, and oat hay were fed to both groups of steers. For four months the two lots of steers were maintained on these rations.

The results of the test proved that the corn-fed lot made 52.3 per cent greater daily gains than did the wheat-fed animals. The wheat-fed beeves put on a profitable growth but did not fatten readily. They ate 13.5 pounds of grain for each pound of gain while the corn-fed steers consumed only 6.47 pounds of cornmeal per pound of gain. However, the difference in the cost of the gain was practically nothing as the wheat was so much cheaper than the corn on the market. As neither of the lots of steers were ready for market it was decided to feed both groups for seven weeks longer on the corn-bran ration. The former wheat-fed animals made phenomenal gains when placed on the wheat ration, averaging an increase of 3.08 pounds a day. The corn lot made no greater gains than before. For the entire feeding period then the wheat-fed animals gained 1.42 pounds daily while the corn-fed steers gained 1.47 pounds per animal per day.

The results of this trial show that rejected wheat and bran would furnish an excellent ration on which to feed the steers during the first part of the feeding period where subsequently they were finished on corn. The cost per pound of gain for the wheat-fed beeves was $.075 while for the corn-fed group it amounted to $.093. To feed corn for the entire period was, therefore, less profitable than to feed wheat for the first sixteen weeks and corn for the last six weeks. Such results conclusively demonstrate the practicability of reducing the expense of the finishing and fattening ration by the use of other grains than corn in the menu during the first few months of the feeding period.

AIDING FARMERS IN FINDING HELP.

The Iowa Public Welfare League has opened a free employment bureau and will register Iowa farmers and aid them in securing farm hands. Men from any state who want work on farms will be registered free also. No fee whatever will be charged. Farmers and farm hands are invited to register with the league. They will then be put in communication with each other by the league and the matter of testimonials and wages will be adjusted between the parties themselves.

When a farmer secures a hand or a hand secures a place it must be reported back to the league at once so the name can be checked from the list and time not lost in writing about places already filled or help already hired.

In registering, farmers will state the class of help wanted and the wages to be paid and farm hands will state age, experience, habits, nationality, wages wanted and locality prefered. Address all applications to Iowa Public Welfare League, 507 Good Block, Des Moines, Iowa.

The hired help problem seems to grow harder as the years go by and it is rather hard to guess why. The wages are high and the work is not as hard as it used to be. The only reasonable explanation seems to be that the young man of today wants to work as near town as possible in order to spend his money before it burns holes in his pockets.

It takes Trinidad Lake asphalt to make roofing *lastingly* waterproof

WITH THE EDITOR.

"The kiss of the sun for pardon,
The song of the birds for mirth;
One is nearer God's heart in a garden
Than any place else on earth."

Does it seem a little early to be thinking of a garden? It is not, really. Although the breath of March be cold, sometimes fierce and blustery, his reign will soon be over, and with balmy April it will be time to work out the plans which, if not laid in March, mean loss to those whose needs would be served by a well-thought-out well-wrought-out garden.

There is so much to be said on behalf of a garden that one does not know where to begin. Wherever one's list of benefits starts, however long it may be, some things are certain to be left out.

Since we Americans are nothing if not practical and farm-folks are extra practical, let us glance at the practical benefits of a garden.

Everyone who lives on a farm knows that securing fresh meat is next to impossible where it is not actually impossible on the farm during the heated term. The housewife has been wont to complain of this, but latterly she is told that a low protein diet is decidedly preferable in summer time, that meat is heating to the blood and does not, as we once thought, generate energy, and that animals are so subject to disease that eating their flesh is a menace to health.

Also there is the question of cost. Think what one has to pay for meat in these days, or if one sells what prices meat brings. If the farm home can eliminate meat eating or reduce meat eating to a minimum think of the gain in hard cash.

Let us content ourselves for the present with these two arguments in favor of a meatless, or a scant meat food supply during the summer, let us agree that if we can replace meat on the family table that we would be gainers in health and pocket. What then? Why, we have swung back to a garden. If people do not eat meat something must be provided to take its place and what so good as garden stuff rich in the carbohydrates which relieve the human system of the deadly uric acid attendant upon meat-eating and which, moreover, builds up a sound digestion and a healthy system.

What a large part of a good garden, one where both vegetables and fruits are raised, plays in supplying the family table only those who have experience are able to testify with authority, but we all have some experience and most of us have some imagination. Let us use both here and now.

When the appetite is jaded and needs to be tempted the well planned garden yields radishes and cress and lettuce which supply elements required by the system in the spring time. Following on come early peas and beans and between are rhubarb and strawberries. It is a brave beginning to a procession of good things which last until "the frost is on the pumpkin" and the late sweet corn and unripened tomatoes take their place on the bill of fare. Meantime self-sealers and other vessels have been filled with good things for winter use, the root cellar is heaped with potatoes and turnips, parsnips and cabbages, and shelves are loaded with canned corn and tomatoes. Not only has the family enjoyed a continuous feast of luscious, wholesome food all summer, but provision has been made for winter time when green food stuff is unavailable and when canned goods bring good prices.

There is another practical argument in favor of a home garden. In the garden there is work for the whole family, work which may be made a bond of union as well as means of development and a source of income for the children.

Sometimes we hear it said that home life is dying out. The different members of the family have each their own interests, each goes his own way, and when maturity is arrived at the family bond instead of being strong and sweet is of such fiber that separation and silence too often make mere strangers of sisters and brothers. Let the family as it is growing up do things together, let them cultivate mutual interests and this tide would be stemmed.

But these are not all the practical benefits. Even in the country the housewife frequently gets less fresh air than is good for her. A garden invites work in the open. There is no better tonic than breathing the cool morning air while the world is waking from slumber and everything is fresh and sweet and calm. The garden in the early morning is a temple where the soul may commune with nature and gather strength and serenity for the day. The house may lack beauty for which the soul hungers, but not the garden if the gardener has seeing eyes and puts love into the work. The Great Gardener loves beauty and He so orders things that every garden may be a place of delight to those who work therein.

Need more be said to incite to the

making of a garden? Need more be said to stimulate better gardens? Surely no.

HOME AND HOMEMAKING.

LITTLE HELPS BY THE WAY.

God, I am glad to live today,
To do the very best I may
With common things in hand,
Nor sacrifice the understood
For any type of higher good
I may not understand.
—Harriet Lake-Burch.

THE BLESSING OF WORK.

Blessed is he who has found his work; let him ask no other blessedness. He has a work, a life purpose; he has found it, and will follow it! How, as a free-flowing channel, dug and torn by noble force through the sour mud swamp of one's existence, like an ever-deepening river there, it runs and flows—draining off the sour festering water, gradually from the root of the remotest grass blade; making, instead of a pestilential swamp, a green, fruitful meadow with its clear-flowing stream. How blessed for the meadow itself, let the stream and its value be great or small! Labor is life; from the inmost heart of the worker rises his God-given force, the sacred celestial life essence breathed into him by Almighty God; from his inmost heart awakens him to all nobleness—to all knowledge, "self-knowledge" and much else, so soon as work fitly begins.—Thomas Carlyle.

SEEDTIME PLEASURES.

I've just received a catalog
Fresh from the seedman's store,
A gorgeous book of fruits and flowers
And vegetables galore;
And I can hardly wait until
The winter's ice and snow
Melt from my well-loved garden plot
To spade and rake and hoe.

For in this catalog I find
New radishes and peas,
Six kinds of lettuce, eight of corn—
I want to try all these;
Cucumbers slim, cucumbers fat,
And limas short and tall,
And melons, cabbage, beets and greens—
I want to try them all.

Tomatoes, ten varieties,
And onions white and red,
Asparagus and celery—
I want of each a bed;
And turnips early, turnips late,
Potatoes by the score,
And squashes, my! don't say a word,
A dozen kinds or more.

I herewith thank the seedman kind
For sending me his book.
When all these things are coming on,
How pretty they will look!
And when the frost has left the ground,
Amidst the robin's song,
I'm going to plant my total plot—
Twelve feet by twenty long!
—Joe Cone.

HOW TO HAVE EARLY CUCUMBERS.

In March take egg shells, fill them with dirt and put three cucumber seeds in each one, then set the shells in a shallow box partly filled with earth. Keep moist and in a sunny place, and by the time you could plant cucumber seeds out of doors you will have plants ready to vine. Simply set the shells containing the plants in your prepared hills; the shells will crumble away.

HINTS FOR IRONING DAY.

Cut a piece of sandpaper 4x8 inches and tack or glue it to the end of the ironing board. One or two strokes of a rough iron over the sandpaper will make it as smooth as wax could do.

Pour melted paraffine into a cup, first lining the cup with cheesecloth. When set, remove, then tie ends of cloth together and use to smooth the irons. The ends of the cloth will make a good handle.

Try using a thick block of wood for an iron stand, instead of an ordinary open iron one. The irons will retain their heat much longer than if the open stands are used, and a good deal of time and strength will be saved by making fewer trips to the stove.

FROM THE HOME COOK BOOK.

Spanish Stew.—Cook together for one hour a medium-sized onion, sliced, one can of peas, one can of tomatoes. Season with salt, butter and black pepper and a small pinch of cayenne. If any of this stew is left over put it into the next day's soup.

Steamed Potatoes.—Fry three or four slices of salt pork and when done pour enough hot water on it to fill the frying pan or skillet (preferably the latter) two-thirds full; then slice into it five medium-sized or large potatoes. Season with salt and pepper and when cooked allow them to brown before taking them from the vessel. Either sweet or white potatoes can be used in this way and sometimes I even slice a large onion in with the potatoes.

Cornmeal Mush.—When boiling meats save the soup they are boiled in. If some cold meat is left over which seems hard to use in other ways run it through the food chopper and add to the soup. Put it all on the stove and let come to a boil, then thicken with cornmeal. Pour into baking powder cans to cool, then turn out and slice, roll in flour and fry brown in hot lard. Served with butter and sirup, eggs and coffee this makes a good breakfast.

Sunshine Cake.—Whites of eleven small eggs, yolks of six, one and one-half cupfuls of fine granulated sugar sifted four times, one cup of pastry flour sifted four times (if you have not pastry flour use two tablespoonfuls of cornstarch, then fill up with the sifted flour), one teaspoonful of cream tartar added to the whites after they are slightly beaten, then beat stiff, pinch of salt, flavoring. Beat the yolks before beating the whites, as you must not let the beaten whites stand; add the sugar to the whites, beat and add the yolks and flavoring; beat again, then fold in the flour, lightly bake in a slow oven at least an hour or more. Slow baking is the secret of a fine cake.

AMONG OURSELVES.

Sometimes while preparing the program for our meetings your chairman hears very nice things about our paper and our Home Department. "Mrs. Victor Iowa" has been whispering to me that her family has been reading this farm paper for nineteen years. Just think of that. "Mrs. Victor Iowa" raises poultry and she frankly says that it is after she has read the poultry department that she turns to the Home Department which she values highly. Then "Mrs. Independence Kansas" has been telling me that her father was a subscriber when she was a little girl and when she grew up and married she had come to consider our paper such a household necessity that they have been taking it almost continuously ever since. It is very pleasant to hear things like this, and it should encourage us all to do our part to make the Home Department worthy of the paper.

Our friend "E. S." who values "Little Helps by the Way" brings us some quotations which have helped her. She hopes they may help some of us also, I doubt not but that they will:

And ever near us, though unseen,
The dear immortal spirits tread;
For all the boundless universe
Is life—there are no dead.
—McCreary.

Yesterday is but a dream; tomorrow is but a vision. Let us so live each today that each yesterday will be a dream of happiness and each tomorrow a vision of hope.

It is a thousand times better to make a mistake now and then than to never move at all.

That man is blest, who does his best and leaves the rest, so do not worry.

"E. S.," has other things just as good among her clippings, but she feared to make her stay too long. Let us hope she will come with the others another time.

Mrs. Osgood from the Canadian Northwest will talk with us about that very important thing "The Gentle Voice:"

I know some homes where it is not pleasant to be even a visitor. Sharp, angry tones always resound through them from morning till night and the influence is as contagious as measles and much more to be dreaded in a household. The children catch it and it lasts for life, an incurable disease. Children catch and imitate cross tones. Where mothers set the example you will scarcely hear a pleasant word among the children in their plays with each other. The discipline of such a family is always weak and irregular. The children expect so much scolding before they do anything they are bidden; while many a home where the calm, firm tone of the mother or a decided look of her steady eye is law, never think of disobedience, either in or out of her sight. It certainly is worth a great deal to cultivate that "excellent thing in a woman," a low, sweet voice. If you are ever so much tried by the mischievous or wilful pranks of the little ones, speak low. It will be a great help to you to even try to be patient and cheerful, if you cannot wholly succeed. Anger makes you wretched and your children as well. Impatient, angry tones never did the heart good, but plenty of evil. You cannot have the excuse for them that they lighten your burdens any, as they tend to make them heavier. For your own, as well as your children's sake, learn self-control. They will remember your tones when your head is under the willows. So, too, will they remember a harsh, angry voice. Which legacy will you leave to your children?

It is a good thing for us to hear such words as these. Even the best of us are prone to allow impatience and vexation to affect our voices, to no good end, as our friend points out. If we could but hear our own voice I think we would sin less often in this direction. Suppose we try to listen to ourselves when we are tempted, the mere effort would steady and strengthen us, I fancy.

Mr. Severin brings us some thoughts which may prove helpful to those of us who have been passing through deep waters:

Beautiful the little modest flower that blooms fresh and sweet after the winter's blast and rain and hail of spring. Nothing can come from above so as to keep old Mother Earth from growing green again by God's blessing. Beautiful the soul that blooms in true faith and nobleness after the storms of trials and adversities are calmed. Nothing can befall a mortal if that mortal trusts in God at the darkest hour. For that faith shall turn the darkness to light of rosy morn. Why does night come with its darkness. Do we not appreciate the

Better Know What's in Your Next Suit

YOU can buy Clothcraft with a guarantee that takes the risk out of clothes buying—a guarantee that covers the vital points and tells you what you have a right to expect as well as what you are going to get.

CLOTHCRAFT CLOTHES

Guaranteed All Wool at $10 to $25

Clothcraft Clothes, in many fabrics and styles at $10 to $25 are guaranteed by both maker and dealer. In the inside coat pocket of every Clothcraft suit you will find our signed assurance that the cloth is all wool, properly shrunk and fast in color; that the trimmings and workmanship are first-class, and that the suit will give you permanent shape and satisfactory service.

Find the Clothcraft store. Ask especially to see the Clothcraft Blue Serge Special No. 5130, at $15.00. Look for the label in the neck of the coat and the guarantee in the pocket. If you can't locate a Clothcraft store, write us and we will send you a card of introduction to the nearest dealer, the Clothcraft Style Book for Spring, and a sample of 5130 serge.

THE JOSEPH & FEISS COMPANY

Founded 1846—Oldest American Manufacturers of Men's Clothes

629 St. Clair Ave., N. W. Cleveland

$850 Detroiter $900

The men who are buying Detroiters are men who like to get the full value of their money. They buy an automobile as they do a binder or a drill—because it will do the work and keep on doing it year after year. **Because it is easy to keep in order**—won't go wrong. **Because it is light on repairs**—built to last. **Because it is simple to operate**—Alex Lemereaux, of Odessa, Minn., without hands, and with only one arm-stump, drives his Detroiter everywhere. **Because it is economical**—20 to 25 miles on a gallon of fuel is the Detroiter's everyday record.

Write for Our Catalog---See What a Marvel the Detroiter Really Is.

That's all we want—for you to see how we have found the way to give—for $850—a car with every fundamental of highest priced construction. Honest material, honest service, every penny's worth, you get in a Detroiter. Write today and let us tell you about it.

A Remarkable Car in Construction, Operation Economy, at a Remarkable Price.

light the more for the reason of the darkness. The battles of adversity cannot forever last, and the sting of God's antiseptic gospel only prepares the way and gives spirituality a chance to heal us. Yes, and after the healing balm of his promise comes to us we praise and thank God that he came to us, even with stinging words.

As has been remarked before there are questions that will not down, questions that like annuals in a garden may be depended upon to put in an appearance every season. Such is the question of the family pocketbook which will receive attention today from "Mr. Stewart Leon" and our friend "Mrs. Arthur." "Mr. Stewart Leon" is accorded the privilege of first speech:

Cousin Clara makes an urgent call for the men to come to the front and discuss the momentous question suggested by her. It certainly is a question that strikes home to every thinking man; yes, and every thinking woman also. If the beginning is right there never will be a time when a partner must ask for a paltry sum which in her judgment she or the household needs. It is not the asking, as I understand it, but the reluctance in granting the request and the often repeated question, "What do you want of money, and where is that nickel I gave you last spring" that humiliates and hurts. Certainly the beginning has much to do with the success or failure of this life partnership. To bear me out in this statement I wish to cite a case known to me, in which the man and woman were both over thirty years old when they were married. Old enough, you may say, to have their habits so fixed that another opinion would not be listened to nor heeded. But with most people to will to do anything helps them to do it, so with this couple. They began life on a small farm, each knowing and understanding their financial situation, and willing to work together for the success of their undertaking. They had no "my money," "my farm," "my stock," "my chickens," etc., but everything was "ours." Each considered the judgment of the other at par, and if it was necessary to spend money for anything, it went; that is, if they had it. Like many with a small beginning they studied economy, and neither of them was afraid to work, and now, as they are going down the other side of the slope, their minds are not filled with regrets and they have no cause to say, "The saddest of all it might have been." From this chapter in the life of these people I wish to draw my conclusion. If people would live single until their judgment is more fully developed there would be fewer mistakes in selecting a life companion. The man who for any reason does not consult his wife and get her opinion on all matters, treating her as a partner, has persuaded himself and shown others by his conduct that he has failed in selecting his wife and he ought to be man enough, if he thinks she is not able to help him, to make the best of the situation and make her an allowance or give her money in a way that will be least humiliating to her, instead of treating her worse than a hireling—only working for her clothes, and sometimes scanty at that, and board. Man, it is up to you to consider these things. What would your housekeeper do if you should be taken away? We can all see, with everything all blank as regards business—at the mercy of so-called law. Had you allowed her to use her judgment she might have shown that she possessed better management than even you. You know that by use all our facilities are strengthened and we are better prepared for life's battles. Like yourself she may have made mistakes, but did you give up, or did she berate you and thrust you into the background? I should say not. The answer to the question, "Who should have the money when the chickens are sold?" is it is "ours," not "his" or "hers," but "ours." Each one should have a firm grip on the purse strings and think of the comfort and happiness of each other instead of having all thoughts centered on self. Then they would live happy ever after, so far as the pocketbook is concerned.

It is delightful to have a man express himself so sanely and so fairly upon this vexed question. The women of our circle surely owe "Mr. Stewart Leon" a hearty vote of thanks. Men are coming to hold more correct views about the pocketbook than they did. If mothers of sons took pains to teach their boys as they should the next generation would see a millennium in this direction. Meantime we shall contribute our part to building up healthy sentiment by pegging away at it here Among Ourselves. "Mrs. Arthur," who is to follow "Mr. Leon," brings to the question the beautiful optimism of a wife who is happy in the love of a good husband and who finds it difficult to realize that there are husbands of a far different kind:

The subject, "How to Make a Stingy Husband Shell Out," is doubtless one of absorbing interest to those poor, misguided women who married for revenue only. Where love is, there is never any wrangling over money matters or anything else. Nevertheless, Cousin Clara's doleful wail set me thinking what I should do under similar circumstances. If "the only man in the world" were to develop a stingy streak, and I was quite sure that he had money to burn, I should certainly find a way to "reach" him and, having reached him, I'd just twine my arms around his neck so tightly that he couldn't get away if he tried, and I'd murmur, softly, sweetly, like the sighing of a June breeze through a rose garden, "I know you haven't thought of it, dearest, but really I need a nickel the worst way." And then I'd catch my breath at the promptness with which he would empty his pocketbook into my lap, at the same time exclaiming, "How could I have been so thoughtless! Why didn't you speak of it before, sweetheart?" Now, my poor abused sister, next time you feel like turning loose and nagging that long-suffering husband of yours, suppose you try my way, just for a change, and see if results are not much more satisfactory. I must tell you a little about our "Rest Club." Did I say that I did not believe in clubs? Well, for my own part I do not care particularly for it, but it has proved a blessing indeed to certain women of the neighborhood. We meet every two weeks on Saturday afternoon at the homes of different members. Children and gossip are strictly forbidden and work is never mentioned, the object being to give a pleasant and restful time to those who attend. We sit around in our best clothes and drink tea and listen to music and reading. One woman purchased 100 one-cent reproductions of the world's greatest paintings and her guests enjoyed looking at and discussing them. "This is the happiest day I have had for a long time," said a sad-faced woman at our first meeting. "It is the first time in fourteen years that I have been away from my children for a whole afternoon." "You may come to my house next," said another woman, who was a very untidy housekeeper. "I'll begin to clean up this very night," she added parenthetically. Accordingly, two weeks later we found her home bright and shining, and it is so to this day; and the discouraged young mother is roused out of her apathy. So we feel that our little club, although not especially educational nor progressive, is nevertheless doing good work.

That "Rest Club" is certainly doing good work as a well-planned club generally does. The club season draws to a close, I wish we might have other reports. Come, sister club women, "speak out and 'spress yourselves," as Mirandy puts it. If this has been your first season tell us how you organized and what you took up and something of what you have accomplished. And if you've a year or two or three to your credit let us hear what you have done to justify your existence.

In some homes the winter meat supply proved too generous for winter needs and the housewife will be happy to learn how to keep the surplus for summer time. "Mrs. Successful Canner" has the floor:

When I tell you that I have found how the farmer may have fresh beef any day on the farm through the hottest weather, without ice, you will doubtless say, "Incredible!" Yet it can be done. Just now farmers are killing their own beeves or buying quarters and halves, and just now is the time for the busy housewife to lay in her supply for summer—via the "fruit jar route." Bring in some of that beef and cut it from the bone in pieces perhaps two or three inches square—just a nice size for the plate. Put the pieces into some of those empty fruit jars until they come within one inch of the top of the jars. Add a tablespoonful of salt and a little pepper, if you wish it. Put on the rubber and lid, but do not screw up tightly. Then put a thick pad of cloth in the bottom of the wash boiler, also wrap each jar, and set them carefully in the boiler. Pour cold water into the boiler until it comes about two inches below the rubbers on the jars. Now boil steadily for four hours, refilling with hot water as the water boils away. Remove from the fire and tighten the lids. Be sure to turn each jar upside down to see whether it leaks, as this is very important. When the meat is cold dip the tops in melted paraffine and remove to the cellar.

Even if one has no surplus meat "Mrs. Successful Canner's" coming should be of interest if there are animals on the place yet to butcher or fowl whose days of usefulness are over. Speaking of canning I want much that we should go into it in all its phases this season, more thoroughly than we have ever done before.

LOW COLONIST FARES.

Victor-Victrola XVI
$200
Mahogany or quartered oak

If there is any place where a Victor-Victrola is needed and sure to be appreciated, it is in the homes of the farmers—in *your* home.

You haven't the opportunities city people have for attending the theatre, opera, and musical concerts—and yet you have real need of such entertainment to rest body and mind after your day of toil.

And you can have it with a Victor-Victrola in your home. You can enjoy the world's best music, sung and played by the same great artists who entertain the large city audiences.

You can hear whatever kind of music you like *right now.*

You don't have to wait until you feel you can afford a $100 or $200 instrument—any Victor-Victrola you choose as the instrument for your home will play every record in the Victor catalog, and will give you almost as perfect music as the Victor-Victrola XVI, the instrument by which the value of all musical instruments is measured.

Any Victor dealer in any city in the world will gladly demonstrate the Victor-Victrola to you and play any music you wish to hear.

Write us for the handsome illustrated Victor catalogs.

THE YOUNG FOLKS

Letters and Articles for this Department Should be Addressed to Aunt Mary, Hawley, Minnesota.

ROLL OF HONOR.

Ayfa, Bertie-ha-ha, Blondy, Brown-eyed Marguerite, Brutus, Bunny, Christina, Detective, Fairy Love, Flora, Gladness, Happy Harry, Indian Lassie, Lefty, Little Beauty, Little Nell, Manna, Maude, Nebraska Farmer, Nursie, Ocke, Pocahontas, Poppy, Puss, Sandpiper, Sunday, Sunshine, Ted, Tricksy Bunny, Utokla, Verano, Wiggly Will, Zelah, Zephyr Vose.

These young people sent good literary work, written on but one side, and signed in full.

The following do not get credit on the roll: Daddy's Girl, Crimson, Peach Blossom, Mountain Lion, Housekeeper, Inez Mae and Helen Kirkhuff.

Arkansas Girl, Fairy Love and Goldie Lock win pansy badges for three times on the Roll of Honor, and Atlantica won a silver badge for three times on the Roll of Honor after getting the pansy badge.

The names of the following pansy badge winners were omitted from the February 13th issue: Bernette, Cherry Blossom, Dakota Kid, Little Fairy and Wee Wifie.

Atlantica, will you send us your photo for publication?

On account of a fire our department got a little mixed and a set of puzzles designed for publication were "dis-lo-cated," so they did not get in, while the answers did. Please excuse us. We give you a few puzzles today instead, and hope they will please you.

SPRING IS COMING.

Spring is now coming! Spring soon will be here.
To our dull hearts she is the most dear.
Many fair flowers she gaily will bring;
At her light step the green grasses spring.

Leaves will come out from the buds on the trees.
Spring's call came ringing far out on the leas.
Hail her! oh, hail our sweet, beauteous spring!
Come, young and old; come her praises to sing!

First comes old March, all blust'ring and bold;
He soon rules over the frost and the cold;
Comes like a lion, goes out like a lamb.
Thinking of sport, very happy I am.

Then comes the month we surely do love;
Sunshine and tears, both are sent from above.
April, sweet April! bring on your showers;
Deck all the meadows and gardens with flowers.

Next comes dear May, so fair, full of life,
Ready to win or to die in the strife.
We all love May, and not without reason;
With her dies the spring; then comes the next season.

Hail her! oh, hail our sweet, beauteous spring!
Come, young and old; come, her praises to sing!

—Ted, Wisconsin.

SAME STORY EVERYWHERE.

I wonder if any of our cousins know of a good way to get the boys to come out to Epworth League and the other devotional meetings of the young folks of the church. We have a fine league in our town, but the girls are the only ones that come.—Flora.

Stories About the Browns.

1. The Grizzly Bear.

There was once a woman named Mrs. Brown. She had four children, named Florence, Thomas, Belle and William. Their father was dead and their mother had to wash for a living. They lived in a house with the windows broken, and the doors half off their hinges.

Florence and Thomas had to carry wood from the river, which was quite a ways from the house. One day when they were gathering wood, a great grizzly bear came upon them. They ran to the nearest house and called for help. The men came out and killed the bear. After that when they went after wood, one would keep watch while the other gathered an armful of wood.—Nebraska Farmer.

Note.—Aunt Mary would like her younger boys and girls to write other stories about the Browns. Just send one apiece, not over 200 words long. No one over twelve years need try this. Write on one side of your paper, neatly, and sign your pen name and age; then at the very bottom of the last page write your real name and address. We'll give you just two weeks to write your story and send it in to Aunt Mary. A pretty prize for the best story about the Browns.

The Rabbit's Misfortune.

One summer morning before the sun was up, Mrs. Rabbit told her children goodbye and started off in search of something to eat for them. They cried after her to bring them some nice cabbage and lettuce leaves. She was very light hearted as she ran through the open timber, and the sun was just peeping over the distant hills as she came to Farmer Brown's garden. She crept through the fence and began nibbling off the fresh green leaves of Mrs. Brown's early cabbage. In a few minutes "Bang!" went the report of the farmer's rifle.

Oh, how her foot hurt. The bullet had struck her. She limped away as fast as she could, and just in time, for the farmer was going to fire again. She reached the timber as quick as she could with her foot hurting so bad. There was nothing for her to do but go back to her little ones. So she kept going.

When she reached the old rail fence

Don't get caught with leaky roofs when the spring thaws come

Remember the roof on your house, barn or other buildings that leaked a few drops last fall—a little investigation *now* may mean a *big saving* when you put on a new roof or replace an old one.

Certain-teed

(Quality *Cert*-ified—Durability Guaran-*teed*)

Roofing

in Rolls and Shingles

General Roofing
The World's largest manufacturer of Roofings and Building Papers

There is a ***Certain-teed*** Roofing and a simple method of applying it for every building on the farm. Look for the ***Certain-teed*** label of quality and 15-year guarantee on every roll and crate of shingles. Get prices from your local dealer—he will save you money

Valuable Book Free You will find many valuable suggestions in our new book, **"Modern Building Ideas and Plans"**—it tells you what to do and what not to do—it suggests economies and conveniences that will save you money. Address,

PEOPLE'S POPULAR MONTHLY,
211 Grand S. 3rd
Des Moines, Ia.

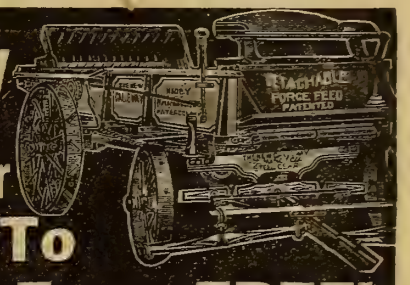
Clean Your Separator

Old Dutch Cleanser does the work in half the time. Does it far better too than soap and water. For the fine particles penetrate every little seam, removing milk stains and grease from the hard-to-get-at places. Cleans everything around the dairy quickly, thoroughly and hygienically. Saves work, worry, time and money.

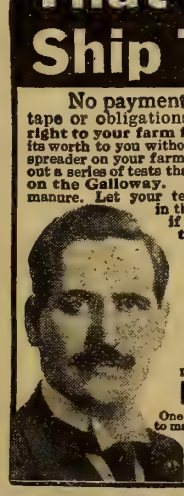
Many Other Uses and Full Directions on Large Sifter Can—10c.

Old Dutch Cleanser

Here's My New 1913 Model Galloway Spreader That I Want To Ship To Your Farm FREE!



No payment down—no bank deposit—no lease, notes or mortgages—no red tape or obligations of any kind whatever. I'll ship you this new, 1913 Model Galloway **right to your farm for 30 or even 90 days trial absolutely free.** I'm going to make this spreader prove its worth to you without a word of argument on my part whatever. Here's the way I'll do it: I'll put the spreader on your farm for a 30 to 90 days trial **absolutely free.** I'll put it right straight up to you. Figure out a series of tests that would make scrap iron and kindling out of any other spreader made—**then try them on the Galloway.** Load it up as full as she'll hold with the toughest, tramped down or frozen slough hay manure. Let your team trot and slam it in gear! Do you think that there is one other manufacturer in the world that would dare to hint at such a test as that? You know there isn't! But if you can think of a severer test, go ahead. **I'll take all the risk and let you be the sole judge.** If you think you can possibly get along without the Galloway after you have had the free trial, just send it back to me. I'll pay the freight both ways—you won't be out one cent. If you want to keep it, I'll guarantee to save you $25 to $50.



Get My Big 1913 Proposition NOW!

Four years ago I started working on the biggest, finest and most daring plan I've ever offered. Now I've got it perfected. I can't explain it here—there isn't room. But if you'll write me at once I'll tell you how you may get one of my 1913 Model Spreaders *partly or entirely without its costing you one cent.* I won't ask you to do any work—any soliciting or any canvassing. It's the fairest, cleanest, most amazingly generous, co-operative plan that you or anybody else ever heard of. Write me and I'll tell you all about it.

My Regular $1 Book —"A Streak of Gold" — FREE

One of the most valuable books any farmer ever held in his hands. Explains fully, in plain language, how to make manure the greatest money crop on the farm, how to spread it, care for and use it. I'll send it free, also my 1913 Spreader Catalog and full details of my 1913 proposition. Send a letter or postal.

under which she and the little rabbits lived, she saw a strange sight, for there was Mr. Brown's little girl feeding her children some table scraps. She had seen her papa shoot the poor rabbit and felt so sorry for the baby rabbits that she thought she would go feed them.

At first Mrs. Rabbit was afraid of the little girl, but she soon came up and ate from her hand. The child soon went home, after promising to come again tomorrow and feed them. She said that she wouldn't let her papa shoot another rabbit.—Gladness, age 14.

PUZZLES FOR MARCH MYSTICS.

1. Beheadment.

He drew off her WHOLE, and on her fair hand
Placed a token of FIRST, a plain golden band.

—Poppy, age 8.

2. Transposed Vegetables.

Better sew up that SEAM, OTTO, before the MINK PUP gets to playing with it or you will have to cry "EEL" or give him some CRUMB CUES. If one RAPS PINS into a rip, it will be a FAILURE COWL, and a pin is A PEST, TOO. One is liable to RUN IT pretty near into his SHIN CAP and leave a ROT SCAR there.

Detective, Iowa.

3. Drop Letter Publications.

(Some of the papers we take.)

One W-s-o-s-n F-r-e- raises tobacco; that is something not needed in a W-m-n'- W-r-d. The A-e-i-a- W-m-n can put in a great many H-p-y H-u-s at her N-e-l-c-a-t, or fancy work, as she calls it. We read D-i-y N-w- about prize fighters, millionaires and suffragettes, but the F-r- W-r-d doesn't get much attention.

—Maude, Minnesota.

4. Behead and Curtail.

1. He stuck an old * * * * * into the ground, and trained the * * * vine up on it. 2. We have a pig that will munch * * * * * and wiggle his left * * * at the same time. 3. Guy used a narrow * * * * * as an * * * after losing one. 4. The * * * * * sneaked into the kitchen and stole a nice mince * * *. 5. I was * * * * * * frightened to pieces when I learned that our visitor was an English * * * *. 6. Sam put on his old * * * * * and started with the * * * for the garden. 7. The * * * * * * are thick up in our cemetery; old man Peck says there is a * * * * of 'em.

—Ayfa, age 12.

5. Central Syncopations.

(Take out the middle letter.)

My old o o o o o has a white nose and white o o o o, so we call her "White Stockings." As long as Joe o o o o o, he will tell o o o o, I suppose. Although Polly looks fat, she says she o o o o o for some o o o o like mother used to bake. They are o o o o o to ring the o o o o when dinner is ready. That o o o o o looking gentleman is a o o o o prince, they say. My o o o o o o boy is a o o o o o o little chap; just watch him climb that tree! I would go to the o o o o o for my vacation, but it would o o o o too much. In fighting, o o o o o some one of about your own o o o o. Do not o o o o o mother out of a o o o o with her old friend by playing the piano all the time. Pearl makes a great o o o o o because her o o o o is broken.

—Beverly, age 15.

The International Sunday School Lesson

FIRST QUARTER. LESSON XI GEN. XII., 1-13. March 16, 1913

THE TEST OF ABRAHAM'S FAITH —THE STORY.

High Bridge, Kentucky, was tested when completed. Twenty platform-cars, loaded to the maximum of their capacity with steel rails, pushed and drawn by five locomotives, formed the trial train. First they crossed the bridge at full head of speed; then backed slowly. Next they dashed forward, suddenly reversing the engines and clapping on the brakes, so as to throw the whole ponderous weight dead upon the central span. Every atom felt the strain, but the bridge stood the fearful test; and thousands of intensely interested spectators broke forth in applause. Hundreds of thousands of travelers have since crossed that fearful gulf with perfect equanimity because the bridge was once so thoroughly tested, and endured the ordeal. Like a clap of thunder in a clear sky to Abraham came the inexplicable and remorseless command, "Take thy son, and offer him for a burnt offering." The bridge of the patriarch's faith was to be tested by the dead drop upon it of an indescribable weight. The second verse records the command, the third the obedience. There is no mention of the Gethsemane between. The battle was fought, victory achieved, deed done, when morning broke. The preparations were made expeditiously, but with such care that nothing was forgotten. The journey consumed three days. The exact site of the sacrifice cannot be determined. It is comparatively unimportant. It was in the neighborhood of the sacred place where "a greater Father afterward offered a greater Son." So Isaac went up the mount, carrying the wood that was to consume him, as the "greater Son" afterward carried his cross up the Via Dolorosa. Keener than the knife which Abraham carried was the innocent query of his unsuspecting son, "Where is the lamb?" May not the father's answer be tinged with the hope of a substitute when he replied, "God will provide?" Abraham had built many altars before, but never one like this and with emotions such as now surged in his heart. The innocent, silent submission of Isaac made him a speaking type of the Lamb who 2,000 years later was to be led to the slaughter in this very vicinity. As far as Abraham was concerned, the offering was made, the deed done. In mercy God stayed the literal sacrifice. It was the "spirit" he wanted, not the "letter." The letter killeth, but the spirit maketh alive. Out of heaven itself descended upon the patriarch the Divine blessing as he stood beside the altar blazing with a victim that the Lord himself had provided. The bridge of Abraham's faith had stood the fearful shock. Its thoroughgoing soundness was demonstrated for all time by such an ordeal as no human heart has ever been subjected to before nor since. Paternal instinct and affection, family ambition, fond hopes, and all that were as small dust when faith and obedience were put into the other scale. Abraham could not see how the glowing promises were to be fulfilled if Isaac were slain. But, then, he was not walking by sight, but by faith. The severest test of faith also witnessed its sublimest victory.

The Teacher's Lantern.

The superlative strength of Abraham's faith would never have been fully revealed to himself, to angels, or to men, had it been subjected to any less crucial test than this. For Abraham everything centered in Isaac. He had waited some thirty years for his birth, and had enjoyed his sweet companionship for twenty-five years. To calmly, quickly, obediently, believingly lay him on God's altar as a whole burnt offering argued the sublimest faith of all the ages. A revelation to Abraham himself—this certainly was. He was not aware until then of the tenacity of his own trust. His ability to bear the brunt of such an unexpected and awful deprivation disclosed it to him. Though the son of promise should be taken, his faith flamed up in triumph. He believed God would restore him or fulfil the promise by other means. A spectacle to angels this scene undoubtedly was. As two of them witnessed Abraham's joy at the annunciation of the near advent of his son, so a cloud of them may have witnessed his unhesitating renunciation of that son at the call of God. From the gallery of the sky they looked down upon the arena of earth, and saw the patriarch act well his part. The exemplary power of this tragic sight upon humanity at large, as well as upon Hebrews in particular, who shall ever measure it? This thrilling and scenic, but unstudied paragraph—every soul of man has been the better for the reading of it. What parents have been nerved by it to give back to God the children he called for! Our afflictions seem light, and but for a moment, when compared with Abraham's. That he endured heartens us to believe we can too. An acted parable the scene is evidently intended to be. That it is so educative is sufficient justification of it. It pictures with inimitable fidelity the anguish of the Infinite Father as he gives his Son to be the Substitute in penalty for a lost world. It portrays the ineffable grace, patience, meekness, obedience of the incarnate Son of God. Abraham, Isaac, and the altar stand for the Atonement itself—help us to understand, appreciate and believe it.

OUR FASHION DEPARTMENT.

ALL PATTERNS, 10 Cents Each.

THIS department is prepared especially for The Iowa Homestead. We can supply our readers with high-grade, perfect-fitting, seam-allowing patterns at 10 cents each, postage prepaid. Full directions for making, as well as the amount of material required, accompany each pattern. When ordering, all you have to do is to write your name and address plainly, tell us the correct number and size of each pattern you want and enclose 10 cents for each number. We agree to fill all orders promptly and guarantee safe delivery. Address all orders to The Iowa Homestead, Des Moines, Iowa.

6057 Girl's Suit.—In this design we have a pretty suit for the small girl. The coat is made in box fashion and the skirt is a three-gored design. The suit is quite easy to make and may be fashioned of serge, tweed or homespun.

The pattern, No. 6057, is cut in sizes 6 to 12 years. Medium size requires 3¾ yards of 36-inch material and ⅝ of a yard of black velvet for the collar. Price of pattern, ten cents.

6067 Lady's Dress.—A delightful frock is here pictured, and one quite easy to make. It has the fashionable and convenient front closing and may be made with either the empire or regulation waist line. The skirt is cut in four gores and can be made with inserted plait or habit back.

The pattern, No. 6067, is cut in sizes 34 to 42 inches bust measure. Medium size requires 6 yards of 36-inch material and ⅝ of a yard of 22-inch all-over. Price of pattern, ten cents.

5981 Lady's Three-Gored Skirt.—This skirt is a fashionable three-gored model made with double flounce and is particularly suitable for costume development. It has excellent lines and is perfect fitting over the hips. Serge, chevIot or broadcloth can be used to make this skirt.

The pattern, No. 5981, is cut in sizes 22 to 30 inches waist measure. Medium size requires 3⅜ yards of 36-inch material. Price of pattern, ten cents.

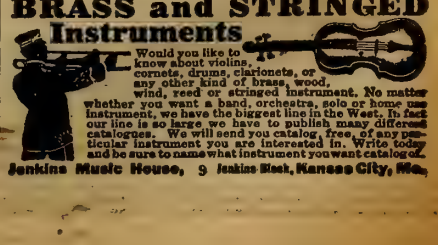
6065 Child's Dress.—This dress has the fastening at the side of the front and has a dainty two-piece skirt. The neck is collarless and the sleeves may be long or short. The cuffs and belt are fashioned of contrasting material, which gives the frock a pleasing trimming touch.

The pattern, No. 6065, is cut in sizes 4 to 10 years. Medium size requires 2⅝ yards of 36-inch material and ⅝ of a yard of 27-inch contrasting material. Price of pattern, ten cents.

6071 Lady's Blouse.—This waist is one of the newest models in shirt waists and has the latest style dropped armholes. It may be made with or without the center box plait and the neck is finished with a turn-down collar. The sleeves have novel cuffs and the general appearance of the blouse is chic and stylish.

The pattern, No. 6071, is cut in sizes 34 to 42 inches bust measure. Medium size requires 2¼ yards of 36-inch material. Price of pattern, ten cents.

BRASS and STRINGED Instruments



Would you like to know about violins, cornets, drums, clarionets, or any other kind of brass, wood, wind, reed or stringed instrument. No matter whether you want a band, orchestra, solo or home use instrument, we have the biggest line in the West. In fact our line is so large we have to publish many different catalogues. We will send you catalog free of any particular instrument you are interested in. Write today and be sure to name what instrument you want catalog of.

POWER ECONOMY

In Every Revolution

—That means T & M. Some engines "turn the wheels" and burn up gasoline; the T & M achieves perfect power economy. Air-and-gasoline spray, properly mixed, and subjected to maximum possible compression just before ignition, by quick, powerful explosion—yields utmost speed and energy for time and fuel consumed. Then—

T & M FARM ENGINE

—design and construction precludes expensive slow-downs and wasteful speed-jumps; highly-sensitive throttling governor holds the T & M steady under any load variation. Again—bull-dog build and big, wide base save power—prolong life.

No cranking, no tinkering; choice of four fuels (gasoline, kerosene, distillate or gas); low cost of upkeep; a grilling factory test—and the T & M "armor-plate" guarantee. Sizes—1½ to 20 h. p. A mighty good engine—worth your immediate investigation.

Agriculture in High School.

By W. E. Larson, Wisconsin.

AGRICULTURE will in the future be taught in high schools and county schools of agriculture. They are really different in character, and when the county schools of agriculture shall become more fully developed, the two will have somewhat different functions. The high school is a general school for the training of all the children in the community. It is a school especially adapted for the young people between the ages of fourteen and eighteen years. The county schools of agriculture, on the other hand, when they shall have become more permanently established, will be strictly vocational schools to which young people will go who have reached the age of seventeen, eighteen, nineteen or more years. In other words, the county schools of agriculture will ultimately be schools to which the young people will go who have decided to make agriculture a vocation and who desire to have some specialized instruction therein.

High schools located in the country communities should have agriculture in their courses. The primary purpose for this work in the country high school is that instruction should always be related to the environment. Every good teacher tries to relate the subject studied to the life of the student. The environment must come into the subject under discussion. This is especially true of school work that has science for its foundation. To teach science without relating it to the environment is a waste of time, especially in the secondary schools.

There is, however, a limit to the amount of agriculture that should be taught in the high school. In the first place, the pupils are not sufficiently mature to take up the subjects that more properly come in a later period. In the second place, there are other subjects which are just as important as agriculture during this period of the student's development. Country people should not simply be good farmers. They should be men and women of culture and broad sympathies. History, literature, music, etc., should enter into the school curriculum. The country needs a country high school which is, in fact, a continuation of the elementary school.

In my estimation it is not wise to introduce into the high school course of study things that are too technical either in agriculture or any other subject. The school should always aim to get the pupil interested in his home life, and, therefore, high schools should continually keep before its young people some study that will show the wonderful possibilities in agricultural vocations. Yet it should not make the mistake of going to the other extreme and introduce into its courses material that is adapted to college work. This work should be left for the special school. The high school should acquaint the student with all the simple operations on the farm based upon scientific knowledge, such as the testing of milk, the judging of grains, corn, etc., and such other operations as can be profitably studied at this period of the student's school life.

The county school of agriculture is a school on a larger scale, and it should be largely vocational. When a student enters a county school he leaves home and for this reason he ought to be at least seventeen or eighteen years of age. He has now decided that farming is to be his vocation, and he enters upon the school work with the idea of learning as much about this vocation as possible. In other words, the county agricultural school is a trade school. In these county schools we shall expect to find teachers who have specialized more extensively in the agricultural work. The development of the agricultural interests of the county is their special function.

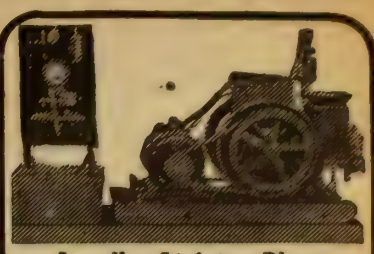
There should exist a vital relation between the high school and the county agricultural school. The principal and other members of the faculty of the agricultural school should keep in close touch with the principals of the high schools located in the country communities of the county. Many questions will come up in the average high school which the high school principal will have difficulty to solve. The agricultural schools will have a much more extensive equipment than we shall expect to find in the high school.

The county agricultural school should be an institution to which the farmers of that community can turn for help. To be sure some help may be obtained from the local high school, but we can hardly expect the high school to be able to give this information in all the different cases. The agricultural school will to a great extent take the place of the university in the community. As the agricultural interests are developed it will be impossible for the university to handle all the work, which comes from the growing demands, and much of this work can profitably be delegated to the local agricultural school. These agricultural schools will be in close touch with the university, and in that way can become distributing agencies for the agricultural information that is especially adapted to their own localities. The agricultural schools should take over a great deal of the work that is now done in the short course.

In conclusion I will say that I believe the county agricultural schools are yet in a transitional stage. In many cases they have been compelled to admit students that are not prepared to take the work. The time will come when most of those who enter county agricultural schools will be high school graduates. All persons should have had at least a considerable portion of a high school course. On the other hand, while the agricultural schools should try in every way to serve the communities in which they are located, it would be a serious mistake to try to make them colleges at the present time. The principals must take the young people that they do get and plan courses according to the preparation these people have had. In the course of time the entrance requirements may be raised and the work may be more specialized. At the present time the teaching must be strongly academic and the schools should not neglect the common branches. As these schools are vocational schools they should aim to be intensely practical. The teachers who are selected for these schools should be men and women who know farm life as it is and can give the students such instructions as will bear immediate results. The high schools and the county agricultural schools should try in every way to build up the high schools in the county and try to have these high schools do such work as will keep the young people interested in farm life and farm occupations. On the other hand, the high school should encourage its young people to go to the agricultural schools after graduation. The high school should aim to have a course of study that will interest the young people in farm life and thus lay a foundation for agricultural pursuits.

"Iowa farmers should look out for adulterated seed this spring," said Prof. L. H. Pammel, chief in botany of the Iowa Agricultural Experiment Station. "We recently analyzed some sweet clover seed sent in by an Iowa farmer, and found that about 89 per cent of the sample was alfalfa and weed seeds. Many bad weeds are brought into Iowa each year in agricultural seeds. Chicory, wild carrot, buckhorn, Canadian thistle, dodder and quack grass have been introduced into many clover meadows. The experiment station stands ready to examine free of charge samples of clover, sweet clover, and grass and garden seeds for purity and vitality."

There is an opportunity for creating a market for American apples in France, according to Consul John Ball, of Havre. While the wholesale dealers in that city state that the French people do not consume nearly as many apples as the American, the demand appears to be fairly good "and is certainly increasing steadily."



Install a Lighting Plant

Enjoy the comforts that electricity brings to your home—the convenience of electric lights and the many uses to which electricity can be put. Install a power plant of your own. An

Union Stock Yards, Chicago, Ill., March 7th.—The live stock grower appears to have become the supreme arbiter of prices for that commodity after a long period when occasions on which the packer was forced to submit to dictation were rare. Evidence has been furnished in every department of the trade within recent months that when stock yard prices are not in accordance with the growers' ideas of values he merely locks up his cattle, hogs or sheep and awaits favorable market action. Commission men are no longer forced to make frantic appeals to feeders to suspend loading operations to permit demoralized markets to recuperate; the feeder invariably takes the initiative. A 5-cent break in hogs prompts free use of padlocks and the available supply of cattle and sheep is in the strongest hands the trade has ever known at this season. Prices are gradually ascending, although the present level of live stock values wears a prohibitive appearance when the overtaxed consumer is reckoned with. However, for the latter there exists scant prospect for relief within the near future.

The past week has seen another light supply of live stock at the leading market centers and higher prices for everything vended at the yards is explained by the deficiency. The week's local supply will show a decrease of about 10,000 cattle, 6,000 calves, 45,000 hogs and 27,000 sheep from the corresponding week last year, and for the year to date six leading western markets disclose an aggregate shrinkage in supply of 77,000 cattle, 995,000 hogs and 245,000 sheep in round numbers.

In the beef steer trade, commercially finished bullocks sold up to $9.30 here this week, the showing of $9 cattle became conspicuous and a spread of from $8 to $9 gathered in the bulk. Fat cows and heifers scored price gains ranging from 25 to 40 cents and reached the highest levels for the classes now forming the bulk of the supply in trade history. For thin cattle of a decent class to restock depleted stock farms or fill feed lots, last week's decline was easily restored and more feeders reached $8 and better than at any preceding time in history, only plain and medium thin stockers failing to show as high or a higher level than prevailed at the high time two weeks ago. Hogs today missed touching the predicted 9-cent mark by a hair's breadth, $8.97½ being paid for lights and $9 refused for a special sort of 150-pound averages which were as scarce as "hens' teeth" and for which eastern order buyers were clamorous. Sheep and lambs close the week on the crest of a 25 to 50-cent advance over a week ago, with matured muttons selling higher than at any previous time this winter, or since last May, and best lambs reaching a $9 to $9.15 basis.

There is logical reason to expect some temporary reaction from this week's advance in all departments of the trade, as the prices can hardly fail to attract a larger marketward movement and as consumptive demand for meat will no doubt show some contraction resulting from Holy Week fasting. Holy Week this year ends March 22d and only moderate receipts will be needed next week, as retailers have learned from experience not to stock up heavily for this period of slack consumptive demand, but the trade is now on a considerably higher basis on everything than at the opening of the Lenten season and that the trend of prices will be upward during the greater part of the next thirty-day period is generally believed. In the cattle trade current scarcity is expected to continue at least that much longer, after which enough southern grass stuff will probably be showing up at Kansas City and St. Louis to furnish a measure of relief. Having practically reached the 9-cent mark, hogs are expected to soon eclipse that figure. This week's short porcine supply destroys the illusion that growers have been holding hogs back for an 8-cent market in the country. Colorado holds the key to the lamb market situation and will continue in that position until its crop is marketed. No considerable supply of lambs can be expected until after Colorado has cleaned up and Kentucky's and Tennessee's new crop is ready for loading. Sheep will continue scarce until Texas relieves the situation with a run of grass muttons, probably the latter part of next month.

BEEF STEERS.

Fat, handy-weight steers are enjoying the best demand, but quality rather than weight is becoming more of a factor, as the supply of heavy beeves is not large enough to prove particularly burdensome. Plain and medium steers have lost part of a 25-cent advance scored during the first half of the current week, but are still 10 to 15 cents higher than a week ago. Well-fattened steers of all weights are about 25 cents higher for the week. Killers have exhibited by their actions that beef stocks are small and distribution on a hand-to-mouth basis. During the week the short bulk of the beef steer supply has sold at $8.25 to $8.85, and a $9.30 top was made. Cattle from $8.25 down are decidedly plain as to beef quality, but $8.75 has to display quality. Preference is for fat 1,100 to 1,250-pound bullocks, and there is little danger of an oversupply of fat stuff of those weights, although the market could be easily overstocked with heavy cattle, but that any considerable number of cattle of any class is pressing on the market is improbable. Quotations:

Prime steers, 1,350-1,700 lbs	$9.00@9.30
Choice steers, 1,250-1,500 lbs.	8.85@9.25
Choice steers, 1,100-1,240 lbs.	8.75@9.00
Good to prime yearlings	8.40@8.85
Medium to good yearlings	8.00@8.40
Common to fair yearlings	7.25@7.90
Good steers, 1,100-1,400 lbs	8.20@8.60
Good steers, 900-1,200 lbs	8.00@8.60
Fair steers, 900-1,200 lbs	7.65@7.90
Medium steers, 850-950 lbs	7.40@7.50
Inferior steers, 850-950 lbs	7.00@7.35
Common steers, 800-850 lbs	6.75@7.00

STOCKERS AND FEEDERS.

Thin cattle that go back to the country as a basis of future supplies continue to command figures that emphasize very clearly the actual shortage existing. Buyers are scouring the corn belt for well-bred stock cows and bulls to ship to the breeding grounds of the West and Southwest and for the first time in the history of the business money does not talk loud enough to effect same sales. During the first half of this week the market easily recovered the decline of the week previous on feeder and good stock steers, in fact, there was more business in feeders at $8 to $8.25, the latter representing the top, than ever before, but 10-cent declines are shown at week-end from the mid-week high spot. Still good qualified stock and feeding steers of all weights are as high as at the high time two weeks ago, while thin plain and medium stockers are within 10 to 15 cents of the record prices then noted. There is scant prospect of prices falling much below current high levels, as with the coming of the grazing season demand promises to become more avid than ever. Only plain light stock steers are selling below $7 and fancy steer yearlings are selling as high as $8, while close to fifty car loads of choice 850 to 1,100-pound feeders have left Chicago this week costing their purchasers $8 to $8.25. Good feeding heifers are bringing $6.25 to $6.50, and the class of stock heifers selling under $6 or stock cows below $5.50 is unattractive, to say the least. Quotations:

FEEDERS.

Selected, 900-1,150 lbs	$7.90@8.25
Fair to good	7.50@7.85
Common to fair	6.75@7.40
Feeding heifers, com. to good	5.75@6.50

STOCKERS.

Selected, 500-700 lbs	$7.50@7.90
Fair to good	7.00@7.40
Common to fair	6.00@6.85
Stock heifers, com. to good	5.40@6.15

BUTCHER CATTLE.

A better market for butcher cows and heifers was never experienced than has been that of the past week. Supply has been light and the market advanced sharply during the first half of the week, fat cows gaining 25 to 35 cents and some good heifers selling 50 cents higher. Since Wednesday the tone of the trade has been less gay, but the advance has been held. Choice to prime heavy cows are selling up to $6.85 to $7.75 and good to choice fat handy heifers are selling like hot cakes at $7.25 to $8, while some prime heifers have reached $8.25 and a fancy class of baby beef heifers would not fall short of $8.50. Medium to good killing cows are selling at $5.50 to $6.50, heifers under $6.25 have absolutely no claim to decent killing quality and canner and cutter cows are making $4 to $5, largely only shelly canners going at $4 or lower. Beef bulls are 15 to 25 cents higher for the week and bolognas 10 to 15 cents higher, the latter selling up to the highest levels touched this season. Calf receipts disappointed buyers this week, falling over 6,000 short of the run the same week last year, and prices for vealers advanced 25 to 50 cents, while heavy calves closed strong. Quotations:

BEEF COWS.

Choice to prime fed cows	$6.85@7.75
Good to choice cows	6.15@6.85
Fair to good cows	5.65@6.15
Common to fair butcher cows	5.10@5.65

CANNERS AND CUTTERS.

Good to ch. heavy cutters	$4.75@5.00
Fair to good light cutters	4.50@4.75
Fair to good canners	4.25@4.45
Poor to fair canners	4.00@4.25
Old, thin, weak shells	3.25@3.75

HEIFERS.

Choice to prime heifers	$7.65@8.50
Good to choice fed heifers	7.15@7.65
Fair to good heifers	6.50@7.15
Common to fair heifers	5.00@6.40

BULLS.

Good to choice bolognas	$6.15@6.35
Light and medium bolognas	5.85@6.10
Canner and poor light	4.75@5.65
Good to choice butchers	6.50@6.85
Good to fancy beef	6.85@7.40

VEAL CALVES.

Good to choice vealers	$10 50@11.00
Fair to good light vealers	9.50@10.25
Strong weight vealers	7.50@ 9.00
Good to choice stock calves	7.00@ 7.65
Inferior to fair hvy. calves	4.50@ 6.00

HOGS.

Seventy-five thousand fewer hogs at eleven markets this week than last, 146,000 less at the same eleven points than a year ago this week, an eastern shipping demand at Chicago that has absorbed more than one-third of the local supply, and an advance in speculative futures in provisions amounting to more than $1 a barrel on pork and about ¾ cent a pound on lard and ribs from the low point last month, to the highest prices of the season, answer the query for reasons for the soaring hog market. Today's hog prices were the highest for the week or since October 21st last. Prime 153 to 178-pound hogs sold up to $8.97 and the bulk of the supply made $8.70 to $8.85, prices showing advances of 30 cents generally over a week ago, while the top was 37½ cents higher. Packers are resorting to heroic measures to prevent a runaway hog market, and shippers are making the market. The hog supply shrinkage for the year to date at eleven markets is nearly 1,000,000 head. Today's quotations follow:

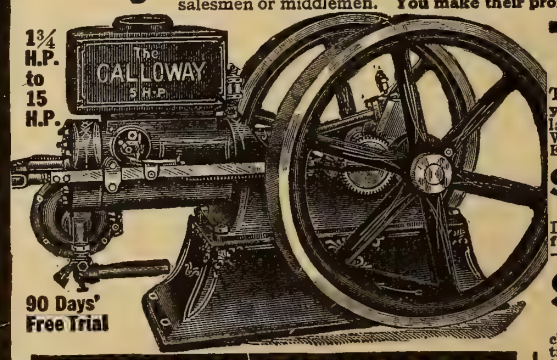
Bulk of sales	$8.70@8.85
Mixed, 215-250 lbs	8.60@8.75
Mixed, 170-200 lbs	8.70@8.85
Medium weights	8.70@8.80
Light butchers	8.75@8.85
Heavy butchers	8.70@8.80
Light shipping	8.85@8.97½
Heavy shipping	8.65@8.80
Heavy packing	8.45@8.60
Rough heavy packing	8.30@8.45
Throwout packing sows	7.90@8.30
Fair to choice light	8.70@8.90
Light-light, 125-165 lbs	8.55@8.85
Pigs, good to fancy	7.85@8.65
Pigs, inferior to fair	6.85@7.70
Boars, poor to good	3.75@4.75
Stags, subject to dockage	8.65@9.00
Government throwouts	5.25@7.00
Government pigs	2.50@4.50

Take My New Engine —Use It 90 Days FREE!

Take one of the wonderful new 1913 Model Galloway Gasoline Engines —use it right on your own farm for one month, two months or three months **absolutely free.** Write at once for my 1913 catalog—pick out the size and style engine you want me to ship you on this free offer—I'll ship it **immediately** Put it to work on your farm the day you get it. Keep it working every day. Watch it carefully. Compare it with any and every engine on the market that you can get a line on *no matter what the price.* If anybody else is trying to sell you an engine, tell them to make you the same offer that Galloway does. Tell them Galloway is willing to put his engine right side by side on your farm with any other engine in the world *and let you be the judge.* Tell them you don t want any engine salesman trying to influence your judgment—you're buying *engines* not *conversation.* Don't listen to a man who isn't willing to let you judge his engine on its merits. The man who is afraid to meet me on that kind of a proposition *is no man for you to do business with.* Keep my engine a whole month or even two months or three months if you want to. Then if you believe that there is a better engine than the Galloway anywhere in the world at any price, tell me so and I'll take it back and *I'll pay all the freight charges both ways, so that you won't be out one single cent for anything.* If you do decide to keep the Galloway, just tell me so and I'll give you the benefit of the biggest and most liberal engine offer ever made.

I'll Save You $50 to $300 Sure!

I'll make you an actual present of $50 to $300. I'll positively guarantee to save you at least that much in the first cost alone. I'll sell you a Galloway direct from my factory where it is made. **You pay me just what it costs to make it** plus one very small profit—**that's all!** There are no jobbers, wholesalers, retailers, salesmen or middlemen. **You make their profits yourself when you buy a Galloway.**



The Only Way Is the Galloway

That's the way to buy an engine, **and it's the only way that's absolutely fair to you,** and that's the only way that I'll sell an engine, because I won't keep a dollar of any man's money **unless he would rather have my engine than the cash.** When a man will tell me that—**then and not until then do I consider a sale as made.** Every single man who does business with me is absolutely protected by my

$5,000 Challenge—$25,000 Guarantee

I back every promise, every statement and every claim with $5,000 **in cash.** I protect every one of my customers by a $25,000 guarantee of **absolute satisfaction.** Understand, I don't say **reasonable satisfaction** but **ABSOLUTE satisfaction —AND YOUR WORD is always good with me.**

Special Service Bureau FREE

My force of high salaried Engine Experts are at your command absolutely without charge. They will tell you how to select exactly the engine which is best suited for your particular purposes; how to test and judge an engine; how to use one to best advantage; how to fit up a power house—besides answering fully and completely any question about the care and operation of an engine. This is absolutely free to you whether you buy a Galloway or not.

20,000 REASONS

Here are a few expressions from farmers now using Galloway Engines. Twenty thousand others have had exactly the same experiences. These are men just like yourself. **Before they bought a Galloway they were in exactly the same position as you are now.** You will say exactly the same as they do after you get your Galloway.

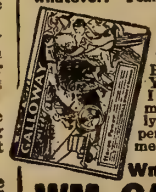
Alex. McLachlan, Argyle, Mich. I received my Galloway Engine last week and it is all right. Everybody says it is a dandy engine. **Some of my neighbors got bit on other engines** by paying $400 for a 9 h. p. and $460 for a 10 h. p. I like your engine dandy.

Fred Ruthardt, Mt. Vernen, S. D. I must say the engine is all right. **I saved about one hundred dollars in** buying from you. I don't want to be without the engine, not at all. I use it for shelling corn and grinding feed.

Frank Peck, Dorchester, Neb. My Galloway Gasoline Engine does lots of work for me. It shells corn, saws wood and grinds feed. I have no trouble with it. It is simple and easy to start. **My twelve-year-old boy starts it easily.**

Important! Get My 1913 Proposition

This year, I've got something better to offer than I ever had before. **I've got a plan by which you may get your Galloway Engine either wholly or partly free and, besides, without any soliciting or canvassing, whatever.** I can't explain it now, but I tell you all about it in a personal letter when you write me.



Engine Book FREE

Now, don't wait a minute. Get my Engine Book and my special 1913 offer right away. You won't be under any obligations at all—I just want you to fill out the coupon or mail me a postal or letter, that's absolutely all I ask. If you haven't got a pen or pencil handy, go and get one and write me right away.

HINTS·SUGGESTIONS·DEVICES

We extend a special invitation to our subscribers to assist us during the coming months in making this department better than ever. Please send along a description, accompanied by a drawing, of any handy device you may have around the farm, or something that is connected with the home.

A Useful Cabinet.

A cabinet like the one shown in the accompanying illustration may be made out of an ordinary dry goods box. The drawers should be constructed so that they will slide easily and the sliding process may be facilitated if a little grease is used where the drawers rest. The number of drawers will depend upon the size of the box and the purpose for which it is to be used. As indicated in the illustration, such a cabinet can be used for nails, washers, bolts, taps and small repairs.

Making a Post Sharpener.

This is a great convenience when posts are sharpened by one man, says Mr. Clement White, a Kansas subscriber. The frame holds the post in position and all the maker has to do is to wield the ax. The brace is a large post set solidly in the ground. It should be set in a leaning position. Nail pieces of planks on the end to make a receptacle for the posts which are to be sharpened to recline in. The amount of slant required will depend on the length of the posts.

A Tool Rack.

A sensible and inexpensive tool rack is shown in the accompanying illustration. For such tools as long handled forks, brooms and hoes an ordinary auger hole would answer every purpose. For such tools, however, as a short-handled spade the holes will have to be chiseled out. In making this rack a board one inch thick and one foot wide will answer all practical purposes. It should be placed on uprights that are about two feet in length.

Stone Boats.

A stone boat is a useful thing even upon a farm where there is not a stone. It is handy for moving barrels or other heavy things about, but more especially so for hauling plows, harrows or bags of seed wherever they are needed about the farm. The first illustration shows one of these boats made of two curved runners connected by cross bars the ends of which are fitted into inch-and-a-half holes in the runners and wedged firmly to keep them in place. The second illustration shows another kind of stone boat made with plank sides and with bottom of oak boards laid crosswise. These boats may be made of any desired length, six feet long and three feet wide being the most convenient for general use.

A Sanitary Well Curb.

A well house like the above is a guarantee that impurities will not get into a dug well. The curb is set in a cement platform. This platform is built around the curb, thus holding it solid and preventing surface water from trickling down. The curb is made from matched lumber with a roof that has a sharp slope. The well wheel is hung on the center pole of the roof. The forms for the cement platforms are made from six inch boards. The concrete is mixed half cement and half ballast. Apply three inches of concrete, then spread on a layer of hog wire. Put bent rods around all the corners. Apply the rest of the concrete. Smooth off well and let stand three days before removing forms. The well curb should have lids attached with hinges, these can be closed when the well is not in use, thus preventing dust from blowing down.

That no better opportunity for profitable stock raising was ever offered to the farmers of the United States than that now presented by the present very moderate prices for pure-bred animals with which to improve foundation stock and prevailing high prices for all meat animals having proper market quality and finish, is the opinion of M. F. Horine, one of America's stock experts. There is, he has declared, a world-wide shortage of live stock, especially cattle. The population of all civilized nations are growing much faster than the general meat supply. South American live stock industries are crippled by three seasons of drouth and foot and mouth disease and the supply of meat animals in the United States has actually decreased during the last decade while the population has increased over 21 per cent. That there is an opportunity for the economical and profitable production of beef in many sections of Wisconsin those familiar with conditions willingly admit.

"The Lock With a Grip That Will Not Slip"

The Square Deal Lock **double** grips the one-piece stay wire to the strand wires and absolutely prevents them from slipping. It locks every joint of Square Deal Fence so your stock can't spread the stay wires—**holds every strand with an iron hand.**

Lets you forget you have stock full of life and energy on one side of the fence and fields of growing grain or hay on the other. Every Square Deal Lock is a lasting guarantee of fence satisfaction. There are no brittle welds to snap—no cumbersome knots to hold moisture, gather rust and weaken the fence. The simplest, strongest, **safest lock ever used on a wire fence.** Get Square Deal prices and see this fence before you buy.

Square Deal Fence

HAS WAVY STRAND WIRES, giving it elasticity—making it springy so it will quickly come back into shape after a sudden heavy strain—keeps it tight and trim the whole year round. These elastic waves are woven into the strand wires. They won't stretch out and let the fence sag between the posts. They are like so many steel springs keeping the fence tight and trim, giving your farm a well kept, prosperous appearance, and adding years of life to the fence.

THE ONE-PIECE STAY WIRES prevent sagging, bagging or buckling to let the pigs under. They help support Square Deal Fence so it requires fewer fence posts. This means a big saving of money, time and labor.

Write for Price List, Catalog and Free Folding 2-Foot Rule

Just drop us a postal and we will send you by return mail latest Square Deal prices, complete catalog, local dealer's name and a high grade, four section, 2-foot folding rule—all **FREE.** Send today.

Beauty-Strength-Durability - Easy To Erect - Cost Less THAN Wood

CYCLONE FENCES AND GATES

This is the standard lawn fence of America—the fence of Quality and Economy. Gives the home permanent protection and makes the ground look attractive and prosperous.

CYCLONE LAWN FENCE is made of the best quality, large, heavily galvanized, rust-proof wire, woven by the exclusive Cyclone *sag proof* method. Easy to put up—self adjusting to uneven ground—may be erected on wood or iron posts. Made in many patterns.

CYCLONE VICTOR FARM GATE is heavily galvanized and built different from any other. You can raise it to any position and it stays there; automatic lock is absolutely stock proof. Strong, tubular steel frames; Fabric of heavy rust-proof wire held firm by stretcher bar; no holes to weaken frame.

Catalog Free. Write today. CYCLONE FENCE CO., Dept. 76 WAUKEGAN, ILL.

PEERLESS GALVANIZED SELF-RAISING GATES

Are filled with extra heavy Peerless Fencing of close woven all No 9 wire—strong enough to turn the heaviest animal—close enough to hold small pigs.

Perfectly adjustable, never sags out of shape or drags on the ground and fitted with a double latch. No chains, springs, or other tangle to give out and make trouble.

Think of the work saved by the self-raising feature—do a little figuring—see if it pays to put up with old style, cumbersome, inefficient gates.

Send for our complete Fence and Gate catalog which fully describes this new style.

The Marshalltown Percheron Sale.

C. B. Dannen & Son and H. C. Lowrey held their sale of Percherons at Marshalltown on March 6th and held a very successful sale. Buyers were present from a large territory and secured good values for their money. E. J. Heisel, Fremont, Iowa, sold five mares in this sale that were extra good and averaged nearly $700 each. A list of the sales is appended. Pat McGuire, assisted by John Garis, sold the offering:

STALLIONS.

Jambameau, foaled March, 1909; Chas. Parsons, Carroll, Iowa ---- $1,110
Justinine, foaled March, 1909; D. O. Ellsworth, Iowa Falls, Iowa 900
Koman, foaled March, 1910; Briggs & Barber, Skidmore, Mo ---------- 900

The Kansas City Hereford Sale.

The sale of Hereford cattle held at Kansas City, Mo., on March 4th and 5th by Benton Gabbert, Dearborn, Mo.; W. A. Dallmeyer, Jefferson City, Mo.; Funkhouser Estate, Plattsburg, Mo.; J. W. Lenox, Lake City, Mo.; S. J. Gabbert, Dearborn, Mo.; T. W. Carmichael, Odessa, Mo.; James A. Gibson, Odessa, Mo., and R. T. Thornton, Kansas City, Mo., under the management of R. T. Thornton, was the most successful sale ever held by these gentlemen. They had put their cattle in good condition for the buyers and were rewarded accordingly. The top of the sale was $535, paid by W. I. Bowman, Ness City, Kan., for Generous 5th, consigned by Jas. A. Gibson. The demand for bulls has not been so strong in years. J. B. Gillette, Marfia, Texas, was the heaviest buyer of range bulls. Colonels Reppert and Zaun did the selling. Following is a list of the sales:

BULLS.

Coral Lad, two years; J. F. Speck, Nortonville, Kan. ---------- $280
Sir Simoon, one year; J. B. Gillette, Marfia, Texas ---------- 235

BIG MONEY

Quick, easy work and large profits to the man who sells Dr. Ward's high-grade line of medicines, spices, toilet goods and household necessities. Everything for the housewife—and everything so *good* that folks say—"Wait for the Ward Man."

Here's our agent, John W. Porter, and his letter:

"Dear Friend:

Five years ago I was teaching a country school at $35 a month. A medicine salesman offered me $40 per month and expenses to run his wagon for three months while he went on a vacation. At the end of three months he offered me $50 per month and expenses. I accepted. For that year he did nothing but collect from me weekly and order more goods. I saw that I was supporting his family on his profit and I secured a territory for myself. I now own my own home free from debt, am all paid up with the Dr. Ward Company and enjoy an independent business. If you are working and getting less than $100 a month, write to the Dr. Ward Medical Company. I could not advise you otherwise.

Yours truly,
JNO. W. PORTER, Norfolk, Neb."

BOOKS FREE

Send for them. Find out about this big paying business: Why should *you* take orders from *any man*? We furnish supplies and stock your wagon *free*. The time is ripe and —if you act *promptly*—the territory is ready. Get in on this *money making chance today*, with prospects of from $20 to $45 a week. A postal to us starts the ball rolling toward a big paying job with every chance of an independent future. These interesting books can be yours by return mail.

The two-year-old Shire stallion, Lymm Wonder, weighing 2,000 pounds, one of the best horses in America today, a grandson of the great sire, Locking Forest King, owned by Peter Hopley & Son, Lewis, Iowa. They are now offering this horse and twenty-five other two and three-year-old Shires for sale from $800 to $1,300 that are sound and right and guaranteed breeders. You will find them at their farms at Atlantic and Lewis, Iowa.

How to Improve Our Rural Schools.

By Sen. H. M. Culbertson, Wisconsin.

NATURE, or the undefined law of causes and effects, gives to each new-born person more or less ability, strength as well as weakness and somewhat in the same proportion as these are to be found in its parentage of one or more generations. Considered in a general way, the child is a product of its heredity and environment. Associate a child with abundance of that which produces a smile and a smile becomes one of its individual characteristics, but a generation or two of parentage, well established by early culture of the same, would probably be required to establish this as a reproductive characteristic of the child. (Certain things are being developed in this way by the breeder, foods and environment having been found to have decided influences upon animal life.)

As a people we have left practically all, at least, too much of the training of the child to what we term school, but today are beginning to question the correctness of the custom. We even ask ourselves, "What is wrong with our method of developing humanity, physically and mentally?" We have not been associating an organism with conditions suited only to the development of the desired traits or characteristics.

The manufacturer or merchant wishing to employ an assistant of unusual industry and perseverance oftentimes seeks the country boy or girl, because in them these traits have been developed. The reason is, their association with that kind of life has established this within them. They possess no more natural ability, but have been occupied more substantially. If book learning would have best fitted them for life's work this might not have the result, for the city youth has greater advantages in this respect. Again, the city trained man or woman too may be the most unsatisfactory help in the country; a narrowness may be present which will be difficult to overcome.

City life with its educational advantages does not generally furnish the best material for a nation. Furnish every factor that the country child needs for his education in the country and let his country home be his home until he is developed, then if the city must have him to develop its future let him go. I am opposed to giving the country boy or girl his or her early education in the city. The child with a well-developed country life knowledge never needs to take the second place for capabilities. Of course, he may not be waywise in some things.

Give the boy or girl schooling that is constantly associated with life's problems. Keep them in the country, in the midst of the field of activities where original things and ideas develop and prove out in practice. And most of all give the farm boy an abundance of the practices and sciences in agriculture for it is the greatest and deepest of all industries and studies, and dependencies of the nation, but give it to him in most part when he is in his country home, and in schools established for this specific purpose and in such a way that each day's studies may be demonstrated in actual practice. Give him an education that shall not wither and fade away with a little absence from usage and leave him unprepared, but that which shall establish with him a broad capability for good common sense.

The rural school question is one in which a great number of people are deeply interested today and very many realize that the present methods are unsatisfactory. Every day some time in every school should be devoted to the practical things of everyday life; the soils and farm crops and what becomes of them commercially; that they have a value, and it is their value and transportation that produces the world's business. The older enjoy short lectures in the

TWO SPLENDID HEREFORD BULLS THAT WILL BE INCLUDED IN THE A. F. HAGER SALE AT AVOCA, IOWA, ON MARCH 20TH.

lay of the earth's surface and formation, and the construction of railway lines, and forests and their uses.

Plant and animal life should be two comprehensive studies in the rural school, but no subject should be advanced too rapidly, because then discouragement and a lack of interest follows.

Among the advanced pupils a plan of doing business with the teacher, the banker or accountant may be taught. Physiology can be taught only as the pupil is developed to the stage of absolute comprehension, possibly as it applies to health or accident or with some direct question up for the basis of interest.

With the present methods of teaching many of these are not within the pupil's grasp and he passes on from day to day without interest, consequently there is a waste of time. There is but little place for civil government, history, physiology, grammar, and perhaps some others, in the country school as applied today, and each as taught is but a waste of time.

First, then, we must have trained teachers for the country schools. Second, we should prolong the school period two years because too many will not go elsewhere and this school is the one that the nation depends on most. Third, in many cases schools should be consolidated, because the attendance is so small that no interest can be maintained. Fourth, we need a revised edition of country school books.

The prime feature must be to establish an inquisitive mind within the pupil so he will begin prying into things, then if he can become fascinated with his surroundings, with the way of things, he will soon develop ideas of his own and develop common sense and judgment, and the battle is then won. It is not so much a lot of learning that is needed, but the nack of applying it and the establishing of a basis for good judgment.

BEST DEHORNERS ON EARTH They make quiet cattle always. 15 years on the market. Invention of a veterinarian. Ask hardware dealers for them. If they do not supply write for catalog and prices of 3 styles

Fine Prize Pony Given Away

You see in this picture a boy riding one of the splendid prize ponies I am going to give away. In other parts of the picture are the faces of several other boys. They are rather hard to find, but by turning the picture about you can see them. Mark at least two of the faces with a cross (X) and send the picture to me. Be sure to send your name and address so I can tell you all about the contest in which you can win a beautiful pony and many other prizes.

1500 Votes Free

I will send you a special coupon good for 1500 votes toward the pony. All you have to do to get this coupon is to send your name and address at once.

Shade's Hereford Sale.

One of the largest and best buying crowds that has been seen at a western Hereford sale in recent years attended the J. A. Shade sale at Kingsley, Iowa, on March 6th, and he sold forty-nine head at an average of almost $300. The demand was wonderful for both bulls and females and many persons who came to buy were unable to get what they wanted because of the demand for cattle. The eagerness with which those attending this sale went after these cattle shows conclusively the awakening of the people to the needs of the average farmer and breeder on the average American farm today. They could have sold twenty or thirty more bulls in this sale had they had them. The top of the sale was Beau Matchless, a double-bred Beau Donald bull sired by Beau of Shadeland 35th, and he was purchased by Thomas Mortimer, Madison, Neb., at $780. J. B. Ashby, Audubon, Iowa, secured Rex Dorian, a son of the great bull, Dandy Rex, at $725, and George J. Anstey, Massena, Iowa, selected Beau Dover, a son of Beau Dandy, at $575. The top of the female offering was Helena, a four-year-old daughter of Beau Folly, with bull calf at foot, and she went to W. E. Campbell, Gilmore City, Iowa, at $410. Altogether it was a great sale and marks the era of a new dawn in the cattle business. Col. Fred Reppert cried the sale. Below we list the entire offering:

BULLS.

Rex Dorian, calved May, 1908; J. B. Ashby, Audubon, Iowa ----------$725

Fifty-six head sold for a total of $5,749, an average of $102.66 per head. Twenty sows bred to Defender averaged $153.30 per head. Three sows bred to Superba averaged $175.50.

Parker's Short-horn Sale.

R. M. Parker held a successful sale of Short-horn cattle at his farm near Midland City, Ill. It was, with the exception of one bull, an offering of Scotch-topped cattle, and the prices paid demonstrated that the farmers want good cattle. The animals all went to farmers in Clinton and adjoining counties, a section that has been devoting its greatest energies to grain farming for several years, and the renewed interest in cattle in that region is a most hopeful sign. The cattle were presented in good condition and Mr. Parker conducted the sale in a satisfactory manner. He is a good cattleman and from the small herd that he has left good results may be looked for. Cols. Orval Jones, Rolofson and Harman were the auctioneers, and the following is a report of all cattle selling for $100 or over:

Yours Is the Work That Counts

YOUR season's work means a great deal to you. After you have fertilized your soil, plowed, harrowed and perhaps rolled it, planted your seed in the carefully prepared seed bed, tended the growing crops and watched the grain ripen, you have a right to a full harvest. You can be sure of a 100 per cent return from your fields when you use efficient modern machines for your farm work. You would certainly be taking an unwise and unnecessary chance if you bought a machine that might not do your work as it should be done. To be on the safe side, buy I H C harvesting and haying machines and tools, all of which have proved their reliability through years of experience with harvesting and haying conditions on farms in every part of this country. These dependable machines may be identified by the following well-known names:

Champion Deering
McCormick Milwaukee
Osborne Plano

There is no better time than the present to investigate and decide which machine is the best for you to buy. The opinion of your neighbors is valuable, and should help you to come to the right decision. All of the machines are so simple that they may be handled by ordinary farm help. They are so efficient that there is no question of their capacity for cutting, binding, and saving all the grain in any field, whether it be heavy or light, tall or short, standing, down, or tangled. The haying machines are as efficient as the harvesting machines. When you buy an I H C machine you do away with any chance for unreasonable delay at harvest time. Should anything happen to your machine, it is possible, no matter where you may be, for you to obtain repairs in a few hours' time. Our efficient organization, which includes nearly a hundred general agencies carrying complete stocks of repairs, and over thirty thousand local dealers who carry repairs for the machines they handle, is the most practical guarantee you can have that your grain will be cut and bound at the proper time, and without delay and annoyance.

To secure the best results from these good machines, it is necessary to use a strong, smooth binder twine of reliable quality. I H C binder twine is made under seven brand names—Champion, Deering, McCormick, Milwaukee, Osborne, Plano, International, each in four grades—pure manila, manila, sisal, and standard. Each ball of twine marked with any of these names is guaranteed for length, strength and uniformity of size and quality.

Yours is the work that counts. Make sure that it is done as it should be done by seeing the I H C local dealer and buying from him the I H C harvesting and haying machines, tools, and binder twine that you will need for this harvest. He will supply you with catalogues and full information, or, write

Duncan's Duroc Sale.

It was a fine crowd of breeders present to attend a good man's sale and that same good man gave them a chance to purchase a most excellent bunch of Durocs and this said fine crowd gave Mr. Duncan an average of $70 on fifty head and a dozen of them were September, 1912, pigs which were fine as silk and well grown. Col. H. L. Igleheart made a masterful speech and then he and Colonels Irwin and Wheeler sold hogs. Breeders who were at Lebanon, Ky., that day will long remember the event. Below is a list of buyers and prices:

1. Bob Ewing, New Hampshire, O.$300
2. C. E. Tate, Stanford, Ky-------- 177
3. C. F. Long, Holland, Ky-------- 100

The J. M. Sheehan Poland Sale.

On February 24th, at Stuart, Iowa, J. M. Sheehan sold forty-five head of Poland China sows at an average of $47.07. There were no high prices paid, but it was a good even sale from beginning to end. Sows bred to King Wonder were in good demand, as were also daughters of this same boar. Spring gilts sired by King Wonder topped the sale. Col. H. S. Duncan cried the sale. We list those selling for $40 and above:

1. Patrick Cullen, Stuart, Iowa-$67.00
2. Patrick Cullen ---------- 60.00
3. James McCune, Cummings, Ia. 62.00

Limestone Valley Farm's Jack and Jennet Sale.

The thirty-fifth annual sale of jacks and jennets held by L. M. Monsees & Sons, Smithton, Mo., on March 4th, goes on record as another successful Limestone Valley Farm sale. Monsees & Sons did not have any aged jacks by their champion stud jacks and as a result no sensational prices were paid, the top being $1,540 for the six-year-old jack, Buster Mammoth, a grandson of the old champion, Limestone Mammoth. Geo. Finley, Nelson, Mo., was the buyer. The top of jennets was $850, at which price James Bray, Waverly, Mo., secured Belle of Waverly, a granddaughter of Limestone Mammoth, in foal to the champion, Orphan Boy. The first ten jacks sold at a general average of $1,088 and the twenty top jacks at an average of $948.25. The full thirty-five head of jacks and twenty head of jennets were sold as advertised and every buyer got full value for his money, as is the case in all Limestone Valley Farm sales. There were the usual number of visitors from a distance, but as the list of sales shows the stock went to cornbelt states, Kansas taking more than any state outside of Missouri. Leaving out the two top jacks of the 1912 sale this year's sale exceeds the general averages made in 1912. Colonels Harriman and Sparks did excellent work on the block and were assisted by an able corps of assistants. The appended list of sales tells the story:

Buster Mammoth, three years; Geo. Finley, Nelson, Mo--------$1,540
Dick Moore, three years; A. C. Finn & Son, Salem, Ill--------- 1,280
John Stypes, six years; R. R. Hind, Anna, Ill---------- 1,200
Monsees' Monster, four years; Lindsey & Towne, Waverly, Kan. 1,200
Prospect, three years; Peterson Bros., Waverly, Neb---------- 770

SUMMARY.

35 jacks -------$23,180; aver----$662.28
20 jennets ----- 6,015; aver---- 300.75

Five stallions sold for $975. Total sales, $30,170.

The Malvern Bull Sale.

On the morning of March 8th, at Malvern, Iowa, Geo. H. White and I. J. Swayne made a sale of seventeen bulls and they were disposed of at an average of $205, the top being the old herd bull, Best of Goods, that Mr. White included at the last minute. He went to Lyman T. Shugart, Council Bluffs, Ia., at $925. The yearling bull, Sultan's Goods, a son of Best of Goods and out of a daughter of Whitehall Sultan, was purchased by H. P. Steele, Kingsley, Iowa, at $730, and both of these bulls were splendid bargains. Marion Jenkins, Brayton, Iowa, also got a good young bull in Roan Goods at $275, and there were a number of other good young bulls in the sale that sold worth the money. The demand for good bulls here was not equal to the supply, there being many present from Nebraska, Missouri, South Dakota and all over Iowa, and quite a few went away without getting what they wanted. Carey M. Jones cried the sale. Below we list those selling for $100 and above:

Best of Goods, calved April, 1906; Lyman T. Shugart, Council Bluffs, Iowa ---------- $925
Sultan's Goods, calved October, 1911; H. P. Steele, Kingsley, Iowa----- 730
Golden Goods, calved April, 1912; A. Greenwood, Albion, Neb---------- 195
White Rock, calved March, 1912; W. G. Gay, Tabor, Iowa---------- 130

Bull, calved April, 1912; G. W. Shurbon, Randolph, Iowa--------- 135
Bull, calved May, 1912; A. Greenwood ---------- 100
Bull, calved April, 1912; R. S. Hillyer, Imogene, Iowa---------- 100

Meith's Short-horn and Poland Sale.

One of the nicest sales of the season, everything considered, was the sale of Poland Chinas and Short-horns made by A. L. Meith, Cairo, Neb., on March 5th. There was quite a good local as well as a good outside attendance and the sale was a very satisfactory one to the sellers as well as the buyers. The cattle were too thin to sell high and many of the younger ones were not big enough, owing to the fact that there has been no pasture in that section of the state for the past two or three years, and while the average may not look high, yet condition of the offering taken into consideration, it was very good. The Poland Chinas were also a bit too small for the same reasons as the Short-horns, but they were eagerly grabbed up at an average of $45 per head. A. L. Heywood, also of Cairo, had a consignment of nine head of Poland Chinas in this sale that averaged $38 per head.

SHORT-HORNS.

Royal Gloster 2d, calved 1909; Irvin E. Wilson, Belvidere, Neb--$150.00
Star Missie, calved 1912; E. E. Veeder, Cairo, Neb---------- 127.50

9. J. E. Cox---------- 59.00
10. J. E. Cox---------- 51.00

The illustration shown herewith is a good likeness of one of the young Short-horn females that will be included in the John Ohmstede Short-horn and Polled Durham sale at Guide Rock, Neb., on March 19th. The offering is a very choice one and all of desirable young stuff. Be sure and attend. Mention this paper when writing.

A Planter That Almost Thinks!

With this Rock Island No. 1 Corn Planter you can actually change the number of grains dropped without stopping, without even moving out of the seat! Can plant extra kernels where soil is extra rich; plant less kernels where soil is thin. Gets a lot more corn and wastes no seed.

It plants just as you want. And all rows straight, regardless of horses' speed. Instantly changed from edge to flat drop or back again. Has positive trouble-proof clutch. Special flexible connection to front frame. Adjustable seat. Adjustable width. Discs or runners. 30 or 36-inch concave, flat or open wheels. Now used by 10,000 farmers. It is no experiment, but time-tried, proven and guaranteed. Costs no more than commonplace planters, but worth a lot more.

Rock Island No. 1 Corn Planter

Write!

Send postal for latest Corn Planter Book and we will tell you the nearest place where you can see this wonderful planter. Free copy of Prof. Holden's great book on Corn Growing will be included if you write now.

The Pederson Poland China Sale.

One of the good Poland China sales of the season was that of C. M. Pederson at Dunlap, Iowa, on February 28th, and he sold forty head of sows at an average of $49.68. The offering was presented in nice condition and it was a credit to Mr. Pederson. While no high prices were paid, yet it was a good, even run and every sow was a bargain at the price paid. Three fall sows with litters of pigs about a week old were also sold at $66, $69 and $73 each. Below is a list of those selling for $45 and over. Col. H. S. Duncan cried the sale:

1.	A. Denison, Dunlap, Iowa	$58.00
2.	Jackson & Hill, Jefferson, Ia.	52.50
11.	Jackson & Hill	46.00
3.	Bloom Bros., Dow City, Iowa	60.00

The Hunt & Weberg Duroc Sale.

The sale of Hunt & Weberg at Denison, Iowa, on March 4th, was quite well attended and they sold fifty-five head of sows at an average of $40. The top of the sale was Belle Special, No. 1 of the catalog, and she went to O. S. Larson at $145. Mr. Weberg had a little trouble in his herd in the early fall and had to let up on the feed, and the younger things therefore were not large. However, everything went at satisfactory prices. Colonel Kraschel cried the sale. Below we list those selling for $40 and above:

1.	O. S. Larson, Logan, Iowa	$145
3.	Henry Dohse, West Side, Iowa	40
4.	Henry Dohse	50
8.	R. T. White, West Side, Iowa	52

Lingford's Poland China Sale.

W. A. Lingford, Dannebrog, Neb., made one of the very good Poland China sales of the season at Grand Island, Neb., on February 13th. As usual, a very good offering was put up, and nearly all were taken by breeders. Morris Fowler, Arcadia, Neb., and one of the most enterprising Poland China breeders of the state, topped the sale on Lot 4 at $110. Joshua Morgan bought the litter sister at $75. The forty-eight head averaged $48 per head. Those selling for $40 or more are listed. The sale was conducted by Z. S. Branson and was one of the best conducted of his many good ones:

1.	Chris Miller, St. Libory, Neb.	$ 82.00
4.	Morris Fowler, Arcadia, Neb.	110.00
5.	Joshua Morgan, Hardy, Neb	75.00
6.	W. T. Judy, Kearney, Neb	52.00
7.	A. M. Joy, Herman, Neb	50.00
8.	O. J. McCullough, Clarks, Neb.	61.00
9.	Wm. Nagle, Grand Ridge, Ill.	65.00
10.	C. B. Powers, Aurora, Neb	46.00
12.	F. Loeshi, Grand Island, Neb.	46.00
13.	Herman Johansen, Loup City, Neb.	56.00
14.	Chris Miller	51.00
15.	A. L. Meith, Cairo, Neb	49.00
18.	Mike Castle, St. Libory, Neb.	44.00

55.	John Hufford, Sycamore, Ohio	41

Beef Making in the Future.

By J. A. Evvard, Iowa Experiment Station.

WE ARE on the border edge of a new beef-making period. It is now up to us to cut all the costs of production to their mimimum. This is to be done largely by refining the operation, growing our own cattle of the best possible beef-making breeds and finishing them out as baby beeves. We will grow alfalfa and clover because they are premier cattle foods as well as most superior soil restorers. We should bear in mind that the corn belt is ideal for beef production, that we are in the center of a cheap food producing region, and that on all sides of us the best parts of other states touch. We can also grow alfalfa and clover and market such feed stuffs to more advantage through the live stock than by selling them direct from the farm. Beef finishing and growing tend to ultimately settle in those sections of abundant cheap food.

What is the value of an acre of cornstalks if preserved in the form of silage? Our figures secured by actual trial show that when clover hay is worth $10 as a cattle food corn silage is practically worth two-fifths as much or $4. Last year with silage costing $3.20 a ton the clover hay would had to have been bought at $7.66 to have been equally as efficient. However, assuming silage to be two-fifths as valuable as clover, which is less than the figures show, we find that ten tons of corn silage was worth at the rate of $4 per ton or $40.

Deducting the charges against which were $26.30 this acre of silage or ten tons we have left for the cornstalks a value of $13.70 an acre and if clover hay is worth $10 a ton an acre of cornstalks from fifty-bushel corn land is easily worth this $13.70. Does it not pay to gather and put into silo a part of them?

To determine the comparative value of silage and clover for two-year old cattle and furthermore to discover the best methods of feeding silage we have carried on quite comprehensive experiments at the Iowa Experiment Station the past few years. One trial, especially that of 1911-12 in which five lots of ten steers each were fed, expresses typically the general results of our experience. That corn silage is a most acceptable and efficient fattening steer feed there is no doubt.

The silage-fed cattle, without a single exception, returned greater profit than where clover was fed as the lone roughage. By using silage the gains were cheapened and the profit per steer increased.

Where both clover and silage was allowed as compared to either clover or silage alone, the steers being put upon a full feed in forty days, tne advantages are slightly in favor of the clover-silage combination. Inasmuch as it is fundamentally important that we grow legumes such as clover or alfalfa upon the farm, we are glad indeed that the figures show that both the clover and silage can be used to advantage when fed in combination. Alfalfa should give slightly better results than clover because of its higher protein content and better average quality. In the absence of a legume hay, experience has taught us that some oats straw may be utilized to advantage. Steers getting a full feed of silage, however, will consume very little dry roughage be it a legume or other roughage.

How much silage shall we feed and how shall we distribute it during the feeding period? Our experience clearly shows that steers getting silage should be given a very heavy feed from the very beginning of the fattening period. To induce the consumption of a maximum amount of silage early in the feeding game the corn can be somewhat limited. We compared different methods of feeding silage, one lot being put on a full feed of grain the first forty days, the other two in ninety days. The first lot was allowed all the corn and silage they would eat according to appetite throughout the entire period. They made a little more rapid gain than the other lots, but a smaller profit, namely, $22.03 per steer. Where silage was pushed heavily the first ninety days and both silage and corn allowed according to appetito the last sixty days the profits were $22.45. The last lot put on a full feed of grain in ninety days, the corn being heavily pushed and the silage limited showed a still greater profit, or $23.46, in spite of the increased cost of corn which mounted from fifty to fifty-one the first two, to fifty-seven and sixty-five cents, respectively, the last two months. If the corn had continued at the same average price, as during the first three months of the feeding period or fifty-two cents, the lots fed heavily on silage and light on corn early in the period and heavy on corn and light on silage at the finish would have clearly outclassed the ordinary method of full feeding both silage and corn from the beginning.

The steer will eat too much of the bulky, watery silage at the finish of the fattening period. When on hay the steer naturally comes down from twenty pounds the first month to four pounds the last month, the grain going up accordingly. In this case the grain tastes better than the hay. With silage, however, the steer instead of going back on the silage to the extent of 80 per cent eats about fifteen to twenty pounds at the finish as compared to fifty at the beginning, or a decrease of only 60 to 70 per cent; he likes silage too well. As the capacity becomes limited and the gains more concentrated, thus requiring more dry matter per unit increase, the object should be to keep the feed just a little bit better than the cattle, which merely means that the grain should form a steadily increasing proportion of the ration as the animal puts on the marketable bloom.

The shrinkage on silage-fed cattle is not ordinarily greater than on dry-fed ones. Our shrinkage trials clearly indicate that cattle receiving both silage and dry roughness during the feeding period shrink less than those on either dry feed or silage alone. The clover cattle in the winter of 1911-12 shrank more than any of the silage lots, or 2.669 per cent, while those getting both clover and silage shrank the least or 1.617 per cent. The silage lots ranged from 2.307 to 2.568 per cent. In 1910-11 the average shrink for the three silage-fed lots was less than the clover, while the two lots receiving both silage and clover shrank respectively 1.504 and 1.989 per cent as compared to 2.548 per cent for clover and 2.731 per cent for silage. In shipping silage-fed steers we make it a point to keep some silage in the ration until the steers are shipped. We maintain the former taste of the ration as nearly as possible decreasing the supplement somewhat, however, and adding some oats and dry hay, preferably timothy, together with oat straw if availabe. The corn feed is decreased only sufficiently to allow for the consumption of some oats, say one-fourth to one-third of the ration. By following these precautions our silage-fed cattle have shipped, filled and sold well. In the spring of 1912 not a single steer showed a tendency to laxativeness until the yards were reached.—[Before Corn-Belt Meat Producers' Association.

SHEEP

HEATHERDALE STOCK FARM. SHROPSHIRE RAMS

20 YEARLING and 2-year-old rams sired by imported rams and out of imported bred ewes at very low prices if sold soon. Mention Homestead and write me at once. Address
H. H. REED, - MARENGO, IOWA.

REGISTERED Shropshire rams and ewes of the best breeding and quality. Prices reasonable
Willard Miller, R. F. D. No. 2, Anita, Iowa

WE now offer 30 head of registered females and 8 May Rose bulls, 5 of them ready for service.
WILCOX & STUBBS CO., Des Moines, Ia.

CLUB RAISERS WANTED

I want a local subscription representative in each town in Iowa, Illinois and Nebraska, where I do not have a solicitor at present, to take subscriptions for The Homestead during the winter months. An energetic person can make excellent money working for me.

A Justice of Peace and farmer made $347.00 during December, January, February and March last year with practically no effort on his part. Just as he happened to meet his friends he asked them to subscribe.

An old soldier has earned $386.00 in the last year and has not been away from his blacksmith shop to solicit subscriptions.

A lady who had sold extracts all her life took up our work last winter and has made over $300.00 this year without leaving her home town.

It requires no particular ability to become a subscription representative. There is no reason why you should not make from $300.00 to $600.00 this winter, looking after my subscription interests in your locality.

If you prefer premiums to cash commissions, write us for a list of the nice presents we can make you for raising a club in your neighborhood. We have everything useful to give away from egg beaters to sewing machines and gold watches. Address

James M. Pierce, Publisher Homestead, Des Moines, Ia.

DATES FOR LIVE STOCK SALES.

Aberdeen Angus Cattle.

Mar. 25, White Bros., Perry, Iowa.

H. E. Browning (swine division), Wisconsin, Illinois, Indiana, Ohio, Michigan and Kentucky. Address Hersman, Ill.

John C. Halderman, Kansas. Address 4347 Harrison St., Kansas City, Mo.

A. W. Hopkins, Wisconsin. Address 201-202 Washington Blk., Madison, Wis.

J. C. Price, southern and western Nebraska. Address 145 So. 28th St., Lincoln, Neb.

C. C. Carlin, special assignments in central, southern and northern Iowa. Address 715 Clinton Ave., Des Moines, Iowa.

FIELD NOTES.

A. H. Gerot, Riverside, Iowa, has three first-class imported Percheron stallions that he will sell at snap prices to quick buyers. His advertisement appears elsewhere in this issue.

A. M. Foster, Rushville, Ill., is advertising O. I. C. swine elsewhere in this issue. A sow from his herd produced the champion middle-weight barrow at the last International. He has fall and spring pigs for sale.

C. & C. T. Van Lint, Pella, Iowa, in sending copy for advertisement offering three Short-horn bulls for sale, that appears elsewhere in this issue, write: "The bulls are of the best Scotch breeding and strictly first class."

De Boer and Von Der Ploeg, Pella, Iowa, are breeders of fine fox terrier dogs and their advertisement appears under its proper classification in the poultry department of this issue. Write them for prices or other information.

E. L. Beard & Son, Decorah, Iowa, announce for sale in their advertisement found elsewhere in this issue, a registered Belgian stallion coming three years old and weighing 1,850 pounds. They also have two young two-year-old registered Belgian stallions for sale.

C. C. Mills, Dallas Center, Iowa, will sell seven French draft horses and a Percheron stallion at his farm five miles from Dallas Center on March 19th. These horses are all black and are big, heavy-boned good ones. Arrange to attend this sale. See the advertisement on another page.

Frank J. Clouss, Barnum, Iowa, breeder of Red Polled cattle, whose advertisement appears elsewhere in this issue, writes that he still has a few good farmers' bulls at farmers' prices, also two herd headers that are good ones. He adds, "I also have a few open heifers and some bred to the 2,200-pound bull, Ruperta's Goods, for sale."

At the sale pavilion, Lexington, Neb., on March 29th, Paul Simmons, Cozad, Neb., will make a dispersion sale of thirty-five head of Red Polled cattle. The offering consists of seven bulls and twenty-seven females. It is an extra lot of choice female stock in fine condition and strong in the blood of famous sires, mated to choice bulls. Send for catalog.

A. J. Podendorf, Logan, Iowa, announces a public sale of Holstein-Friesian cattle for March 26th. As is usual in Mr. Podendorf's sales, this sale will be one of the events of the season. It includes nearly 100 head of cattle, seventy of them being high-grade cows and heifers, fifteen choicely bred recorded bulls and the remainder pure-bred recorded cows and heifers. This is an occasion not often presented to farmers who want to buy cattle particularly suited to farm dairying. Additional information may be obtained by writing to A. J. Podendorf, Logan, Iowa.

Frank D. Nelson, Harlan, Iowa, is offering a two-year-old Duroc Jersey boar, a son of Top Notcher Again, for sale in his advertisement that appears elsewhere in this issue. This hog weighs 800 pounds in breeding condition and is fit to head any herd. For further particulars write Mr. Nelson as above.

No section of the country offers more or better opportunities for the investment of labor and capital than does Wisconsin and none extends a more inviting hand to the homeseeker. In climate, diversity of soil, fruits, forests, water supply, mineral deposits and markets, she presents a combination difficult to equal. Wisconsin's invitation to the homeseeker is based on the fruitfulness of her soil. It responds readily and abundantly to ordinary methods of cultivation. No unusual or experimental farm practices are needed to produce staple crops.

Theo. Martin, Bellevue, Iowa, writes as follows regarding his recent Short-horn sale. "My Short-horn sale was entirely satisfactory and the majority of the offering being calves, the average shows a profit, yet at the price they were decided bargains. My auction business has grown to such proportions that it is necessary for me to engage additional help in order that I can be away from home to take care of it. I am pleased to inform your readers that I am now in position to take care of all the auction business which might come my way. My practical experience in breeding Short-horns and Poland Chinas places me in position to render especially valuable services in sales of these breeds. My charges are very reasonable and I guarantee to please or no pay. I have a number of dates booked for next winter, but still have some very desirable ones left."

Manager J. G. Truman, of the Pioneer Stud Farm, Bushnell, Ill., writes: "I am pleased to report that our importation of Shire and Percheron horses that arrived here on February 15th are now fully recovered from their long journey, about a week overdue. They are now ready for sale. We shall take pleasure in showing them to any of your readers who may be interested in a strictly high-class Shire or Percheron stallion. I may say that included in this importation are two yearlings sired by our $10,000 champion Percheron stallion, Intitule, now owned by Samuel Insull, Esq., Chicago, Ill. Advices received from our J. H. Truman state that he shipped our regular March importation on the Minnewaska, sailing from London on March 6th. This shipment will be exclusively Shire and Percheron stallions. Our trade was never better and the demand still continues very strong for high-class stallions." See advertisement in this issue.

One of the handsomest catalogs to reach our office this year is that put out by the Griswold Seed Company, Lincoln, Neb. This firm is a very reliable one which has been in business many years at Lincoln and has made a specialty of field, garden and flower seeds. They have specialized in the production of field seeds of improved variety and have undoubtedly been of great service to the farmers who patronize them. Although they have many different offers that will interest our readers, one of the best, we believe, is their ready quick hog pasture mixture which can be sown early and will be ready for pasture in six or eight weeks and which will be in fine condition during July and August, just when other pastures are dried up. Furthermore, it can be sown in July for fall pasture. Their prices are very reasonable and we recommend that our readers who are interested look into the matter further, addressing the company at Lincoln, Neb.

One of the best implement catalogs that has come to our office is that of the Monmouth Plow Company, Monmouth, Ill., who manufacture plows, drills, harrows, cultivators, spreaders and other farm tools. This firm sells direct from the prices quoted in their catalog and assures quick service, prompt delivery, as well as a square deal with every transaction. For many years the company has quoted freight-prepaid prices in their catalog. Their customers were enabled to know, therefore, just what the implement would cost them laid down at their station. There was no guess work, no chance for being overcharged and no cause for delay. This year the company again quotes freight-prepaid prices and, in addition, in order to give a fair comparison, they give f. o. b. factory prices. This enables the buyer to compare Monmouth goods with others, whether they pay the freight or not. It removes every element of uncertainty. The plan is very unique and serves to further the reputation for a square deal which this company enjoys. An advertisement for them appears elsewhere in this issue.

Taylor & Jones, Williamsville, Ill., write: "Our sales continue good and with our recent importation of stallions and mares we have lots of good horses, Percherons, Belgians and Shires, in our barns for sale. We think if prospective buyers knew the kind of horses we sell for the money and the guarantee we give with each horse, surely they would not buy until they came and inspected our stock. We have thirty head of stallions and quite a number of mares that we want to close out in the next thirty days and anyone wanting a bargain in any of the draft breeds will not be disappointed as to quality and price. Send for our little booklet and we will gladly answer all inquiries. Following is a list of our last week's sales: Two Percherons to Geo. Walls, Edgar county, Illinois; Edw. B. Blair, Sangamon county, Illinois, got a good imported Percheron; Tendick Bros., Logan county, Illinois, selected a good horse; F. M. Branstetter, Audrain county, Missouri, who has been buying horses of us for eight years, came and selected an extra good coming three year old; Laughlin & Eshelman, Lawrence county, Illinois, got a Percheron."

M. G. Arnold & Son, breeders of Poland China swine, Strawberry Point, Ia., write: "Our herd of Poland Chinas are coming through the winter in fine condition. Sales have been very good. However, we have three 260-pound sows sired by Jumbo Ladd and bred for March and April litters to the service of Reubel's Kind, a great yearling, grandson of old A Wonder, which we will price at $40 each. We also have ten April, May and June sows, all safe to the service of Arnold's Expansion for May and June litters. Prices range from $25 to $35. All are good, smooth-coated, stretchy sows. The ten sows due to farrow in May and June are all sired by our 1,000-pound Orange Boy by Big Orange and are extra good values at above prices."

That the man who buys land in Clark county, Wisconsin, and starts to develop a farm is not a pioneer who must go into a new land and work out his destiny unaided and alone is the announcement which the West-Cannon-Bissell Company, of Milwaukee, Wis., is making to all prospective purchasers of its lands in that section. "He has the great University of Wisconsin and other state organizations and institutions back of him. As a citizen of this great state he is entitled to and can readily get the most expert advice and information on all agricultural matters. In fact, these institutions are anxious to get into close touch with the farmers of the state and especially with new settlers in order to influence them to do better farming along lines which will be most profitable for themselves, their communities and the entire state. The state board of immigration, the state board of agriculture, the Wisconsin Live Stock Breeders' Association, the Wisconsin Horticultural Society, the Wisconsin Free Library Commission, the Wisconsin Highway Commission, the state officials and the county organizations and officials all help to smooth the path of the new settler."

Good Hints for Poultry Raisers.

Every reader of this paper could spend a few minutes to mighty good advantage reading the "Hints" on how to prepare young birds, feed fowls and care for eggs for hatching purposes, written by J. W. Myers, president of the Reliable Incubator & Brooder Co., appearing on pages 30, 31 and 32 in the new catalog of that concern for 1913. As an introduction we suggest our readers look up Mr. Myers' advertisement, which appears in the poultry department of this week's issue.

A Simple Self-Raising Gate.

"What makes it raise?" is the question asked when one first sees the self-raising gate being put out by the Peerless Wire Fence Co., Adrian, Mich. A perfectly natural question, as there are no springs or levers to make it raise. The raise is accomplished by the unique construction of the farmer and the tension in the filling. The principle is simple and at the same time is entirely efficient, making a grate free from toggle that is liable to give out and one that will always work and do good service. See advertisement elsewhere in this issue.

A Choice Poland China Herd Boar.

A. Roesler, Wilcox, Neb., has for sale a choice two-year-old Poland China boar. He is sired by Blue Valley Expansion by What's Ex. by Expansion and out of Blue Valley Hadley by Big Hadley and she out of Tecumseh Gold Dust, out of Lady Gold Dust and by Big Tecumseh. This boar is called Blue Valley Wonder 59757 and was bred by Walker & Son, Alexandria, Neb., and is one of the good hogs sent out from this herd. Mr. Roesler would not price this boar if it were so he could be used longer in the herd. He is extra heavy boned, good footed and smooth. A real good kind of a big boar that breeders can use and that will breed well for them, as he is a tried proposition. Address as above and mention this paper. Do this today, as this boar is worth looking after.

Two Good Scotch Bulls for Sale.

Elsewhere in this issue will be found the advertisement of H. B. Harden, Corning, Iowa, who is offering two good young Scotch bulls for sale. One of these is a roan and is a son of that splendid bull, Col. Dalmeny. His dam is Diamond Sunlight by Diamond Rex, and he in turn is a son of Imp. Cock Robin. This bull is a Cruickshank Secret and is the making of a splendid herd bull. This bull was a year old in February and is a very promising young bull. The red bull is Major Boy, a twenty-months-old bull sired by Major, a Bellows-bred bull, and his dam is Miss Bess, a daughter of Bapton Spice. His grandam was that grand good cow, Imp. Roan Bess by the great bull, Star of Morning. If any of our readers want one of these bulls they had better get right on the train and go and see them at once. If you write Mr. Harden kindly mention The Homestead.

The Escher & Son Angus Sale.

On April 16th Chas. Escher & Son, Botna, Iowa, will make their annual sale of Aberdeen Angus cattle at their celebrated Longbranch Farm and they will sell sixty head of the best cattle that have ever gone through a sale ring in this country. They will sell fifty head of cows, unquestionably the best lot that has ever been listed for a sale in this country. Forty-five head of these will be mature females and thirty-five will have calves at side by one of the noted bulls now doing service in this noted herd. Ten of these cows will be imported and five of these will have calves at foot. They are also selling ten very choice young bulls, many of which will be herd-heading propositions. Never before has this firm listed such a high-class offering as they will sell in this sale, and we will go farther than that and say no such offering of Angus cattle has been made in this country. If you want to be sure to get a catalog drop Chas. Escher a postal card and request your name to be placed on their list for a catalog and it will come just as soon as it is printed. Kindly mention this paper when asking for it.

A Correction.

J. M. Peery's bred sow sale was in some unexplainable manner reported in our February 27th issue as a Duroc Jersey sale, when he actually sold Poland Chinas and has not been a raiser of Duroc Jerseys at all. His was one of the good sales of this section and credit ought to be given the excellent breed he is raising.

Harding Pays the Freight.

F. W. Harding, president of Anoka Farms, Waukesha, Wis., announces in the advertisement elsewhere in this issue the forthcoming sale at Waukesha on April 2d, that if any buyer purchases ten head he will pay the freight to any point in North America. Write for a copy of the sale catalog to Anoka Farms, Waukesha, Wis., mentioning The Homestead.

Big Live Stock Shipment.

A shipment of 117 head of cattle left Ravenna, Ohio, this week for California. There were twenty-four head of Short-horns, the balance, with the exception of one Angus bull, being Holsteins and Jerseys. These cattle were purchased mainly under the direction of Mgr. John Garden, of Cottage Hill Farm, and are consigned to several different parties in California.

The Sayer-Stanton Short-horn Sale.

One hundred head of Short-horn cattle will be offered at Chicago, Ill., Thursday and Friday, April 3d and 4th, by George J. Sayer, McHenry, Ill., and Thos. Stanton, Wheaton, Ill. This sale will follow that of F. W. Harding at Waukesha, Wis., and precede that of D. R. Hanna at Chicago, Ill., so that buyers attending this series of sales will have practically 200 head from which to make selections, the largest number of Short-horns that will be offered in any series of sales this spring. Both Mr. Sayer and Mr. Stanton are sending forward some very attractive things, particulars regarding which will appear in succeeding issues of The Homestead. File your application for a catalog with Thos. Stanton, Wheaton, Ill., mentioning The Homestead, and watch next week's paper for particulars.

E. Z. Russell, Auctioneer.

With this issue of The Homestead we begin the advertisement of E. Z. Russell, Lincoln, Neb., who is branching out in the auctioneer business and solicits the patronage of those who are going to want to employ the services of a well-posted and capable salesman. Mr. Russell is one of the best known live stockmen in the West, having been breeding hogs in that state for the past quarter of a century. He is treasurer of the National Duroc Jersey Association and has held various offices in the state. For twelve years he has been a director in the Nebraska State Fair and he has made seventeen public sales of registered hogs himself. He enjoys a wide acquaintance with the breeders throughout the West and he now comes forward as a live stock auctioneer and solicits the patronage of those who are contemplating making sales the coming fall and winter.

Shires for Export to the United States.

The Isle of Ely & Wisbech (England) Advertiser, Wednesday, February 12, 1913, says: "George Tansley has sold to Trumans' Pioneer Stud Farm, Bushnell, Ill., his five-year-old iron gray stallion, Thunderer Boy 29956, in stud book. This horse, bred by the seller, has proved himself an excellent sire, having some twenty-five colts and fillies now on the farm. His sire is that well-known horse, College Thumper (25087), sold to the Hungarian government for a long price, and his dam is Cheerly by Royal Lincoln (6343). Thunderer Boy has the old Thumper blood, from which horse the stud book has so many distinguished winners recorded. He has excellent conformation, stands erect on the best of feet and joints, is seventeen hands high and has grand movement. Joel Wilson also sold his beautiful mare, Strawberry Queen, for show purposes to the same firm. She, too, is by College Thumper and is correct in movement and has the best legs and feet possible. This mare has very peculiar, yet attractive markings, and will be hard to beat in the show ring. The manager, J. G. Truman, of the Pioneer Stud Farm, was very eager to buy when over here last summer, but Mr. Tansley would not sell then."

Buffalo Pieter Doede 94018.

This bull, as junior champion Holstein bull at the Iowa Dairy Cattle Congress and first-prize junior bull calf at the National Dairy Show, was pronounced by the judges to be "the calf without a fault." He showed wonderful constitution, conformation and quality. Buffalo Pieter Doede was not alone bred for individuality, but carries the blood of several large yearly records. His dam, Christmas Belle Pietertje 96528, made 336,286 pounds of butter from 7,570.4 pounds of milk at two years and two months of age. This record was made four years ago and at that time was a record of considerable merit. The sire of this champion bull, Sir Jewel Parthenea Doede 38639, has sired two cows which have semi-official yearly records. Miss Netherland Artis Parthenea made as a junior five year old 848.875 pounds of butter from 17,629.7 pounds of milk and Chloe Mechthilde 2d's Parthenea as a senior four year old made 833.5 pounds of butter from 18,926.9 pounds of milk. A sister on the dam's side to this remarkable bull, Buffalo Caroline, made 21.406 pounds of butter from 377.2 pounds of milk at two years and one month of age. Buffalo Pieter Doede was bred and exhibited by the Chicago Stock Farms and will be shown in their herd again on the 1913 dairy show circuit. This is the third time in five years that

the junior champion bull at the Waterloo Dairy Cattle Congress has been bred and exhibited by the Chicago Stock Farms, Buffalo Center, Iowa. See advertisement elsewhere in this issue and when writing mention The Homestead.

Forty Mammoth Jacks.

Deierling & Otto, Queen City, Mo., have in their barns in Queen City forty head of Mammoth-bred jacks that stand from fifteen to sixteen hands high and range from two to five years of age. These gentlemen make a specialty of furnishing breeders with high-class jacks for both jennets and mares. They want you to come and see the jacks they have on hand, as they feel satisfied that with this number they can please you. Note their advertisement elsewhere in this issue and when writing or visiting them kindly mention this paper.

It Saves the Hogs.

Hog cholera and worms cause more hog losses than any other causes, but they can be prevented. The actual experience of many practical hog raisers has proved that one of the cheapest and most effective ways to make hogs cholera proof and free from worms is to mix a small quantity of Merry War powdered lye with their rations and feed twice each day. When so fed hogs, if they are thin, scrawny, wormy and off their feed, show marked improvement at once. The Merry War powdered lye effectually destroys and expels the stomach and intestinal worms and parasites, which, unless destroyed, sap the blood and strength of the hogs and pave the way for cholera. The expense of Merry War powdered lye treatment is very small, only about five cents a month per hog. It is manufactured by the E. Myers Lye Company, St. Louis, Mo., and is for sale at all druggists, grocers and feed dealers at ten cents per can. The most convenient way to buy it is by the case of four dozen cans for $4.80. The E. Myers Lye Company have recently issued a most valuable book on "How to Get the Biggest Profits from Hog Raising," a copy of which will be mailed free to anyone interested on request.

Are Your Horses Ready?

This is the time of the year for the farmer to critically look over his horse stock and get them in the best possible condition for spring work. Old sores should be healed up and blemishes removed. Attention should be paid to strained tendons or ligaments. All these things must be done if the horse is to be expected to give his maximum strength to the work. Especially is this true if the horse is to be sold soon, for the critical buyer will shave many dollars off the price for a slight blemish. A thickened ankle, a filled tendon, a stocked leg, a slight cap on the elbow or hock, or a little swelling on the shoulder, the result of some bruise from the harness and hard work last year, is liable to cost dearly. The throat needs to be looked into carefully. The feet must be put in good condition, for no horse, no matter how good, can do good work on poor feet. There are many remedies on the market that will assist the farmer in doing this work. Undoubtedly one of the best is Absorbine, the antiseptic liniment. This will cure blemishes without injuring the hair. More about it can be learned from the advertisement of W. F. Young, P. D. F., 390 Temple St., Springfield, Mass., which appears in the veterinary department of this issue.

Sal-Vet a Cheap Live Stock Remedy.

The average cost of live stock remedies for years has been from twelve to twenty cents a pound, a figure which has kept farmers from using them, on the belief that they could not afford to feed them. Of course, if a live stock remedy produces excellent results, saves your stock losses, prevents contagious diseases, etc., one could afford to pay even more than twenty cents a pound. But it is no longer necessary to pay twelve to twenty cents a pound for stock remedies. There is one on the market now which costs five cents a pound in 100-pound lots and less in larger quantities. And the makers prove its merit before you pay for it. It is sold on a guarantee that it must prove satisfactory. We refer to Sal-Vet, a preparation which in about three years' time has become one of the most popular and best known remedies on the market. Success always has its horde of imitators and "knockers" and of course Sal-Vet has its share. The S. R. Feil Co., Cleveland, Ohio, will send our readers enough Sal-Vet to last their stock sixty days. If it proves satisfactory at the end of the sixty days the receiver pays for it, if not, the company cancels the charge. Read their advertisement on the back page of this issue, then fill out and mail the coupon.

Anstey's Hereford Sale—Last Call.

On March 18th, at South Omaha, Neb., Geo. J. Anstey, Massena, Iowa, will make a public sale of seventy-eight head of Hereford cattle, including fifty-three head of young bulls. This will be the largest number of bulls that will be sold in one sale this spring and it will furnish a splendid opportunity for the farmer, the breeder or the ranchman to get bulls. There will be forty head of yearling bulls in the sale and they will be sired by the three splendid bulls at the head of his herd, viz.: Sidney 1st, a grandson of Imp. Keep On; Bruce Beau Donald, a son of Beau Donald 37th, and Columbus K., a grandson of the famous old Columbus. There will be a number of two-year-old bulls in the sale and a number that will be right around a year old. All in all, it will be a splendid place to buy bulls. He has selected twenty-five cows and heifers for the sale and these will range from two to six years of age. These will all be bred to Columbus K., Bruce Beau Donald or Beau Gaston, and some of the cows will have calves at foot. With the wonderful demand that is now on for Hereford bulls it will be readily seen that the Anstey sale is going to furnish one of the best opportunities to get bulls that will be scheduled this spring. The catalog is now ready for distribution and will be sent on application to Geo. J. Anstey, Massena, Iowa, but remember that the sale will be held in the sale pavilion at South Omaha. Please mention The Homestead when writing for catalog.

Borax Insures a Healthy, Clean Home.

Twenty-Mule-Team powdered package borax is one of the most cleanly and cleansing substances known. In the household where it is freely used dirt cannot exist, and with the eradication of dirt, germs of many diseases are destroyed. There can be no surer way to procure the healthfulness of the home than by the free use of borax, which cleanses, deodorizes and disinfects. Order your supply of 20-Mule-Team powdered package borax from your dealer.

Good Method of Handling Seed Corn.

The All Grow Seed House, Knoxville, Iowa, which has a good reputation for trustworthiness and stability, has a unique method of furnishing samples of their seed corn. They don't ask a farmer to order the entire lot he needs with the chance of being disappointed when it is received, but are willing to send for fifteen cents a sample ear which they will guarantee to be a fair sample. This firm also handles Red River Ohio seed potatoes and clover and timothy seed. Their advertisement appears in the horticultural department of this week's issue.

Keep the Boys on the Farm.

The advertising manager of this publication was raised as a boy on the farm and possibly would be there yet had there been more amusement and good times. He recently purchased a Victrola, made by the Victor Talking Machine Company, Camden, N. J., and which is frequently advertised in the Home Department of our paper. He is convinced that had such an instrument been in his boyhood home on the farm he probably would never have left it. Caruso or Melba may sing, or Sousa's band plays some rousing march, a minstrel troupe gives a veritable minstrel show, some noted singers render well-known sacred hymns with the utmost beauty, and the home is filled with cheer and pleasure and seems to make life worth while. Music is needed by the farmers and when there is a Victor Victrola at a price to suit every purse there is no reason why there shouldn't be one of these instruments in every farm home. It is one of the secrets of keeping the boy on the farm and our readers should make it a point to hear the Victor Victrola the next time they go to town. There is likely a dealer near who sells the Victor Victrola and he will be glad to demonstrate it. We urge our readers to get the handsome catalog by writing to the Victor Talking Machine Co., Camden, N. J.

Ohmstede's Short-horn Sale—Last Call.

On March 19th, at the farm, two miles from Guide Rock, Neb., John Ohmstede, of that place, will offer one of the good bunches of choice young stuff that will be sold in Nebraska this season. There is not a cow in the sale over three years old and most of them are this age and one year younger, while three yearlings fill up the list. Not an old cow in the entire offering. The bulls in the sale consist of some really choice ones. About as good a one as will sell this month in the West is in this sale. A few Double Standard Polled Durham bulls are included and they should interest those who wish to breed the horns off. This sale is the day following the H. Smith & Son sale at Tobias, Neb., and the train service is such that good connections may be made. Try and attend both sales.

Clark's Hereford Sale.

One of the last Hereford sales that will be held this spring wil be that of R. P. Clark, at Brayton, Iowa, on March 21st, and he will sell fifty head. Among these will be twenty bulls, including his present herd bull, Gay Donald 12th, a son of the well-known bull, Beau of Shadeland. He has listed a splendid lot of young bulls in this sale because he realizes that there is a demand for them and he is selling enough to make it an object to the farmer or the ranchman to attend his sale and buy them in numbers. One of these young bulls that he is selling is a son of Thornton's great bull, Caesar, and the remainder are sired by Gay Donald 12th, Beau Donald 124th and King Francis. The herd bull, Gay Donald, is a four year old and is a son of Beau of Shadeland 31st. His dam is Monarch's Maid 6th by Monarch of Shadeland 3d and he was by old Anxiety Monarch. Mr. Clark has used this bull with success, but as he is keeping his heifers it becomes necessary for him to get another bull, and he is therefore selling him in his sale. Mr. Clark is selling some splendid cows and heifers in this sale. In other words, he is selecting some of the very best females in the herd and is putting them in this sale. Brayton is situated just the second town above Atlantic, Iowa, and parties coming from the Hager sale the day before can go to Atlantic the same evening and then go to Brayton in the morning. Everybody will be able to return to Atlantic in the evening to go either east or west on the main line of the Chicago, Rock Island & Pacific. Write Mr. Clark for copy of his catalog and kindly mention The Homestead.

Irrigated Land Cheap.

Among the other real estate advertisements in this week's issue of The Homestead appears that of Zeph Charles Felt, Romeo, Colo. This is quite a remarkable district. It grows a variety of staple crops. Alfalfa, wheat, barley, oats, sugar beets and potatoes are bountifully produced. The most notable crop in this section, however, is field peas. This territory is famous for its large shipments of pea-fed hogs and lambs, which invariably top the markets. Land can be bought very reasonably in the vicinity of Romeo. The country is well settled and has good school and church accommodations. Mr. Felt saw the advantages of the Romeo district years ago and purchased a number of farms which he is willing to close out now at very reasonable prices and give long-time terms.

Beehrle Reports Record Duroc Litters.

J. J. Beehrle, Ord, Neb., the well-known breeder of Duroc Jersey swine, reports some record litters of pigs farrowed this spring. Mr. Beehrle states that five sows have farrowed seventy pigs, one sow farrowing twenty, and that he has on hand now from these litters nearly sixty of them. Mr. Beerhle has made this tendency to large litters a feature of his hog-breeding operations and we are glad to know that his work along these lines is producing results. Mr. Beehrle still has a very few sows bred for April farrow that he will sell. When writing him kindly mention The Homestead.

Iowa Gates Everywhere.

A very frequent sight at railroad freight stations all over the corn belt are shipments of Iowa galvanized steel gates, made at Cedar Falls, Iowa, by the Iowa Gate Company, at the head of which is Joseph B. Clay. This concern has a very remarkable record extending over a number of years. The continually increasing sales of this gate prove conclusively its merit. It is sold at a very reasonable price and at the same time covers about all the requirements of the modern farmer. The company makes quite a remarkable offer, which includes a sixty days' trial before buying. No deposit or payment need be made until the buyer actually decides to buy the gate after the trial. They issue a very handsome book showing the utility of the gate and we would suggest that our readers address the Iowa Gate Company, Cedar Falls, Iowa, asking for a copy of this booklet and their special sixty-day proposition, mentioning this paper.

Boosting Iowa's Corn Crop.

There are a great many firms in Iowa who are boosting, or pretending to boost, the state in one way or another. Most of the boosting has a string tied to it or, in other words, the booster is sure of mercenary gain. One firm, however, has undertaken a philanthropical movement which will undoubtedly do much for the state of Iowa. The Home Mutual Hail Association, of Cherokee, Iowa, will give in connection with the Iowa Corn and Small Grain Growers' Association contest, to be held in Ames, Iowa, December 22, 1913, $1,000 in premiums. Information as to how these premiums are to be divided may be obtained from the large advertisement of this company which appears in the horticultural department of this issue. The contest is open to every farmer in Iowa. The Home Mutual Hail Association are making this offer because they are vitally interested in Iowa's crop being increased. No obligations are attached whatever and the company receives no more gain than many other companies who benefit by Iowa's prosperity. The Home Mutual Hail Association have a very enviable reputation and have a large business in Iowa. They are trustworthy in every respect and we can recommend them to our readers. The officials of the company are well known and highly respected business men. James F. Weart, of the firm of Weart & Lysaght, who own and control a large number of lumber yards and grain elevators in northwestern Iowa, is president. R. H. Gray, of the Larrabee Savings Bank, is vice-president. Ralph Hinman, cashier of the First National Bank of Primghar, is one of the members. W. A. Sanford, the treasurer, has for many years been connected with the First National Bank of Cherokee, one of the oldest banks in northwestern Iowa. Lewis W. Wiweke, the secretary, is a young insurance man of push and energy who, by persistence, has made a remarkable career in the insurance business.

The Beautiful Moore Corn Book.

C. Ray Moore, "The Man Who Does Thinks With Corn," on the famous Sunkist Farms, adjoining Kellerton, Iowa, has written a corn book which, in its beauty of make-up and its ability to intensely interest any good corn grower, is a real gem. Mr. Moore, starting as a poor farm boy who had to learn the practical side of corn growing in the school of "hard knocks," has attained to an education in scientific corn breeding and development, and is becoming nationally known as an originator of high-yielding strains of farm seeds, especially seed corn. His corn book tells in the author's unique, original style how he rose from obscurity to success in corn-breeding work, and describes the steps by which he perfected a strain of corn that has yielded exceedingly well. On Sunkist Farms he has built modern seed houses in which he dries early fall selected seed ears on rack driers of his own design. He has a characteristically striking announcement elsewhere in this issue in which he offers his corn book free to corn growers. Look up the announcement and write for a copy today.

The Anoka Farms Short-horn Sale.

No event in live stock circles is looked forward to with more interest year after year than the annual offering of Short-horn cattle at Anoka Farms, Waukesha, Wis. The buying public have come to recognize these sales as the opportunity of the year to make selections from a strictly high-class lot of cattle. There is ample reason for this. The breeding of Short-horns at Anoka is no experiment. It is a life work. The founder of this establishment, the late George Harding, was a master breeder, and when he laid down the labors of the management of the herd some ten years ago the work was taken up by his son, Frank W. Harding, who had given all the years of his life to the assisting of his father in the breeding of good cattle, and under his direction the fame of Anoka has increased in every quarter. The most popular blood in Short-horn circles today is the blood of Whitehall Sultan, the bull that Mr. Harding's unerring judgment selected some years ago to head Anoka herd. His is the record of the greatest sire that the Short-horn breed has ever known, and year after year the public has come to Anoka, the fountain head, for this blood. The sale this year will take place Wednesday, April 2d, and for it Mr. Harding has selected a draft of forty-five head, thirty-three females and twelve bulls, all but six head the produce of the Anoka herd and of the Whitehall Sultan line of breeding. The twelve bulls are an attractive lot, the Anoka kind, which is saying all that one needs to know about them. They are the get of Leader of Fashion, one of the greatest Sultan sires ever at Anoka; Gloster Fashion, Fond Memory, Sultan Mine and Sultan Stamp, all bulls bred, shown and used by Mr. Harding, and the buyer in need of a bull this spring will find in this sale just what he wants as a show or breeding proposition. One of the tops is Gloster Mine by Sultan Mine, out of a Duchess of Gloster dam. He was a winner all through the circuit last year and Mr. Harding considers him as good a calf as he ever offered in a sale. He is low, deep and thick, with a strong head, smooth and well coated, and was either first or second at every place shown last year. No better young Short-horn bull will be offered at a sale this spring, and he should certainly go into good hands, where the best is wanted. Cruickshank Fashion by Leader of Fashion is a top one in any company, is deep and wide, well ribbed and one of the best prospects of the year. Sultan Eclipse by Fond Memory is the only white calf in the sale and is a good one. He has a good head, is possessed of heavy bone and good quarters and is a calf of much promise. Scotch Laird is a bright cherry red, sired by Fond Memory and out of a dam by Whitehall Sultan, thus giving him two crosses of the prepotent Sultan blood. He is a good doer and should develop into something very attractive. Clipper Stamp is the first calf sired by Sultan Stamp, the bull shown by Mr. Harding last year, and is a very wide, deep, thick, soggy fellow, one of the best things in the sale, carrying a very even width. Prince Lavender is a very attractive roan by Leader of Fashion, blocky and smooth and carrying a great coat of hair. He is an outstanding good prospect. Gloster Sultan by Fond Memory, out of a dam by Whitehall Marshal, is a heavy-boned youngster, with a splendid coat and lots of masculinity. The fact that he is a double-bred Whitehall Sultan should appeal to the buying public sale day. Scotch Mine by Sultan Mine, out of a Roan Lady dam, was a winner at many of the shows last fall, and should be looked after sale day. There are other good ones in the lot, all bred strongly in the blood of Whitehall Sultan, the kind that will do to go anywhere. The female portion of the offering is one of the strongest that has ever been sent forward at Anoka Farms, and in many respects it is the best. Among the thirty-three head are some of the strongest show and breeding propositions to be found anywhere. Each year Mr. Harding endeavors to make his sale offering better than that of the preceding year, something that he always accomplishes, so that visitors at Anoka on April 2d can rest assured they will find an offering of Short-horns that will please the most critical in every way. The best blood lines known to the breed predominate in the pedigrees of the cattle, and their individuality is of the sort that cannot easily be duplicated.

NEXT WEEK'S SALE PROGRAM

Tuesday, March 18	Herefords, Geo. J. Anstey, South Omaha, Neb. Holstein-Friesians, Iowa Holstein Breeders' Sale Co., Waterloo, Iowa. Short-horns, H. Smith & Son, Tobias, Neb.
Wednesday, March 19	Holstein-Friesians, Iowa Holstein Breeders' Sale Co., Waterloo, Iowa. Short-horns, John Ohmstede, Guide Rock, Neb. Polled Durhams, John Ohmstede, Guide Rock, Neb.

SPECIAL SALE OF PERCHERON and BELGIAN STALLIONS
FOR NEXT THIRTY DAYS

New Importations arriving! Two large importations received since January 15th. Another importation of stallions and mares now on the water. More to arrive in April. We have at any time of the year more BIG-TON, HIGH-CLASS PERCHERON and BELGIAN stallions than any other firm in U. S.

HOLBERT HORSE IMPORTING COMPANY.

A. B. HOLBERT, Proprietor, - - - - GREELEY, IOWA

OAKLAWN STOCK FARM BREEDS AND IMPORTS
PERCHERON, BELGIAN, SHIRE STALLIONS and MARES

OUR big winnings at the Iowa State Fair were made entirely on horses either imported or bred at Oaklawn Stock Farm. At the Iowa State Fair in 1912 we had the grand champion Belgian stallion, which is one of the most coveted prizes of that great show. We imported the horse that won it. Our last importation arrived in November and are in fine condition to show prospective purchasers. We have another importation due to arrive in Newton the last of this month. We never allow our stock of stallions and mares to get low, but always have plenty on hand from which customers may choose. Our prices are right and our horses are a clean-limbed, sound, good-acting lot and we can please you in horses and price. We give our customers a square deal and have sold a number of men their third and fourth stallions. If you want to save money see me before you buy.

GEORGE EGGERT, Newton, Iowa.

It would be impossible to particularize and do justice to all the different animals. No matter what your want may be in the cattle line you can supply it in a satisfactory manner at Waukesha on April 2d. The advertisement appears elsewhere in this isuse. Look it up and send for a copy of the catalog to Anoka Farms, Waukesha, Wis., mentioning The Homestead when writing.

Frank J. Rist, the Seed Man.

It is something of money value to the purchaser to be able to purchase seeds from a seedman who has a great interest in his work and who feels the need of holding every customer that he may be able to secure. This is the sort of a man whom our readers will be dealing with if they purchase seeds of Frank J. Rist, Humboldt, Neb. Mr. Rist is enthusiastic about the growing of better crops and he believes that one of the quickest ways of increasing the yields of our different grains and grasses is to plant the best seed obtainable. Mr. Rist has spent a lot of time and money in selecting his own seeds, and you may have the benefit of his patient years of work and all the expense for a mere fraction of the first cost. It will not pay to buy inferior seeds when good ones may be bought at the prices being asked by him. He is putting out a neat catalog, with several views of his fields and seed house, and all interested should write at once. Mention The Homestead and address as above.

H. Smith & Son's Short-horn Sale—Last Call.

We are this week making the last call for the Short-horn sale that will be held by H. Smith & Son, Tobias, Neb., March 18th. In this sale these gentlemen will sell much of the accumulation of this herd for the past three or four years, and for that reason but few except young stock will be offered. The cow line is particularly good in most cases and some of the bulls are also very choice. We really believe that this sale will be a good place to buy good cattle, as these will be sold in their everyday clothes. They will not be fat enough to bring high prices, and that is the sort of an offering that the buyer can attend with profit. It also shows what these cattle will look like when they get out on the home fields. Nearly every cow of breeding age will be safe in calf or with calf at foot by the great son of Cumberland's Last, Roan Cumberland. He is one of the great breeding bulls of Nebraska and his calves on this farm show that a cow in calf to him will be a good investment. Do not forget the date and make arrangements to be on hand sale day. This sale is on March 18th and John Ohmstede, Guide Rock, Neb., sells on March 19th. Parties from a distance can make arrangements to attend both these sales with little expense as the train service between points is good. If you have not the catalog, and think you have time to get one, send in your name at once, but do not miss the sale for this reason. We wish to assure intending buyers that they will find a well-bred lot of stuff in this sale. Should you write kindly mention The Homestead.

The Hager Hereford Sale.

On March 20th, at Avoca, Iowa, A. F. Hager will make a public sale of fifty-four head of choice Hereford cattle and his will be one of the good offerings of the spring season. He is selling twenty-six head of very choice bulls in this sale, including two splendid herd bulls. One of these is St. Elmo R., a 2,400-pound bull that has been doing service at the head of his herd. This is a wonderfully thick-fleshed bull and a splendid breeder. His calves in the Hager sale show up well and are thick meated and easy feshers. He is one of the best Hereford herd bulls that will be offered this spring in any sale. The other bull is Clearmont Lad, a son of Dale Lad 8th and out of a dam by Briton 10th. This bull will weigh right around 2,300 pounds and he is an excellent breeding bull. Any breeder who is going to need a bull to head his herd will find either one of these bulls good enough to buy, as they are both sires of some of the best things in the breed. There is an excellent two-year-old bull in this sale named Beau Charm 2d, and while he is not the largest bull, he is nevertheless a bull of splendid quality and will look good in any herd. There is also a state fair winner or two among the young bulls and, take our word for it, you will find some bulls in this offering that are good enough to head good herds or go anywhere else. Mr. Hager has drawn upon some of his very best females for this sale and he will sell some that are as well bred and as good individually as you will find anywhere. The offering as a whole is a good one from one end to the other and we hope those who want Hereford cattle will make it a point to attend this sale. Write A. F. Hager, Avoca, Iowa, for catalog and kindly mention The Homestead.

Bowers' Short-horn Offering.

Regarding the Short-horns he will offer in the combination sale at Galesburg, Ill., March 25th, H. G. Bowers, Elmwood, Ill., writes: "My consignment consists of ten head, five females and five bulls, mostly of the Violet Bud, Missie and Wood Violet families, and all, with one exception, out of or bred to Woodland Sultan, a grandson of Whitehall Sultan. This bull was bred by A. J. Ryden and stood second at Springfield and fourth at Chicago. Violet Queen 3d is a show heifer, sired by Woodland Sultan and out of Violet Queen 2d by Imp. Emperor. She is a nice roan and will make trouble in the show ring this year if fitted. Missie's Pride by Lad's Lad and out of a half-sister to the $3,100 Wanderer's Last, is another good one, two years old this spring. Sultan's Scepter I consider one of the best young bulls that will be offered this year. He is a beautiful red roan and will be a year old in April. He is by Woodland Sultan, out of a Violet Bud dam. Vain Sultan is another good calf by Woodland Sultan. His dam is May Violet 2d, bred by B. O. Cowan and sold in his dispersion sale to Thos. Westrope for $1,360. The old cow is now fifteen years old and a regular breeder. I am also offering a good proposition in the four-year-old cow, Viola by Imp. Emperor, with a fine bull calf at foot by Woodland Sultan and rebred to the same bull. I know that my cattle will please the buyers sale day." Catalogs for this combination sale can be secured by addressing A. J. Ryden, Abingdon, Ill., as per the advertisement elsewhere in this issue.

White Bros.' Aberdeen Angus Sale.

On March 25th, at their farm near Perry, Iowa, White Bros. will make a public sale of forty head of well-bred Aberdeen Angus cattle. There will be ten splendid young bulls in the sale and thirty head of cows and heifers. The offering is very largely made up of Blackbirds, Trojan Ericas, K. Prides, Pride of Aberdeens, Gilts and Miss Copelands. It is an offering that is in nice breeding condition and no one will offer a better line of pedigrees. Among the ten young bulls that they have listed for this sale will be three Blackbirds, and one of these will be a Blackcap; three Trojan Ericas; two K. Prides; one Queen Mother, and one Pride of Aberdeen. The Blackcap bull is a September yearling and is a son of their splendid Blackbird bull, Sunnyside Prince. His dam is Afton Blackcap, a cow they bought of Silas Igo for $555. Another good Blackbird bull is out of Blackbird Lassie and she is a daughter of King Edward W. One of the thickest Blackbird bulls in the sale is Blackbird Perfect 2d, a son of Imp. Everett of Maisemore and out of Blackbird Perfection 2d by the noted bull, Eraste. One of the best Trojan Erica bulls they will offer is Earl Eric of Whitesides and he is a son of that noted bull, Imp. Earl Eric of Ballindaloch. The dam of this bull is Esther of Laggon by Imp. Edelhoff, one of the best cows in the herd. Another good Trojan Erica and a K. Pride, both sired by Imp. Everett of Maisemore, are among the promising young bulls in the sale. One of the largest bulls they will offer is a Queen Mother sired by Sunnyside Prince, out of Lady Midnight by Black Monarchist. They are selling a grand good lot of females in this sale. Among these are seven very choice Blackbirds and three of these are Blackcaps, six Trojan Ericas, five K. Prides, five Queen Mothers, one Gilt, and they are also selling Starrish Rose, that splendid daughter of that noted champion cow, Miss Copeland. She is now a four year old and sells with a most excellent bull calf at foot by the Blackbird bull, Sunnyside Prince. Many of the cows in the sale will have calves at foot and the remainder that are old enough will be safe in calf to either one of their two splendid bulls, Imp. Everett of Maisemore or Sunnyside Prince. The former bull they purchased of Chas. Escher and he is a son of the great bull, Everwise, that was a winner in the old country of many first prizes and gold medals. He is a richly bred Trojan Erica and his calves are showing up fine. Old Sunnyside Prince 2d is the Blackbird bull they have used for several years and he is one of the thickest and typically Angus bulls in the state. He has proved himself a most excellent breeding bull and his get have always been in demand. These gentlemen are selling a very choice offering and it will be a good place to buy Angus cattle. Their catalog is out and will be sent on application to White Bros., Perry, Iowa. Please mention The Homestead when writing for it.

Hanna's Short-horn Sale.

Friday, April 4th, D. R. Hanna will offer forty head of Short-horns from his Cottage Hill Farm herd, Ravenna, Ohio, at public sale at Chicago, and it will be by far the best lot of cattle that has ever been sent forward from this establishment. Manager Garden has selected some of the top things in the herd and the buying public cannot fail to appreciate the value of the offering sale day. The blood of Imp. Villager, the great breeding sire at the head of the herd, will predominate. Ten bulls are listed, six by Villager and four by Village King, one of his best sons. Included in this list are a number of top propositions, regarding which we will have more to say in another issue. They form one of the strongest bull offerings of the year in Short-horn circles. Six daughters of Villager are cataloged, a choice lot of breedy show heifers, including Village Primrose 2d, the undefeated senior heifer calf at the 1912 shows, and junior champion of the International. All cows of breeding age are bred to either Villager or one of his sons, Village King or the sensational Village Denmark. The most attractive pedigrees in the herd book will be found in the catalog, there being representatives of the Brawith Bud, Miss Ramsden, Lavender, Wimple, Butterfly, Augusta, Spicy, Missie, Broadhooks, Nonpareil and other popular tribes, and they will be presented in attractive condition. Every breeder of Short-horns should figure to get some of the Villager blood in his herd. This bull is bound to be one of the great sires of the breed. In last year's show rings he had to his credit the undefeated senior heifer calf, the undefeated young herd and the undefeated calf herd, as well as a long list of other winners. He transmits his good qualities to a marked degree, many of his sons and daughters having been among the sensations of the show rings for the past few seasons. The beginner will find this a peculiarly desirable opportunity to secure the right kind of foundation stock. The get of Villager will have to be reckoned with from now on, and the progressive man will be on hand at this sale prepared to secure some of the cattle. This

sale follows that of Messrs. Sayer and Stanton at Chicago, Ill., and that of Anoka Farms at Waukesha, Wis., so that parties attending the series will have an opportunity to place values upon practically 200 head of high-class Short-horns, giving them exceptional chances to secure bargains, owing to the large number to be sold. In succeeding issues we will speak in detail regarding many of the good things in the Hanna sale. In the meantime file your application for a catalog with John Garden, Ravenna, Ohio, mentioning The Homestead when you write. The initial advertisement appears elsewhere in this issue.

The Galesburg Short-horn Sale.

There will be cattle to suit all classes of buyers in the combination offering to be made at the C., B. & Q. stock yards, Galesburg, Ill., March 25th, by A. J. Ryden, Chas. T. Nelson, W. H. Kreigh & Son and H. G. Bowers. These are all leading Illinois breeders and they are consigning between forty-five and fifty head to this sale, including some of the best things to be found in their herds. Twelve bulls are listed, among which will be found both herd-heading and high-class grading-up material. A. J. Ryden has demonstrated his ability to produce the right kind of cattle on innumerable occasions and he is sending forward ten head of the right sort, including several sired by Village Sultan, a thick-fleshed, strong breeding son of Whitehall Sultan. Several of the females are bred to Juno's Royal, a well-bred producing son of Juno of Woodhill. Chas. T. Nelson, Blandinsville, Ill., one of the most thorough and progressive breeders of Illinois, both of Short-horn cattle and Percheron horses, contributes seventeen head, including several very attractive and well-bred breeding matrons of good ages. Several will have calves at foot by a prize-winning son of the great Choice Goods, and others will be bred to this bull. Mr. Nelson also sells some strong young bulls that will attract attention sale day. Eight head are listed by Kreigh & Son, including two cows with calves at foot by Village Sultan. Two heifers bred to Juno's Royal are listed, as are also two bulls by Village Sultan, full brothers, both being out of the same Red Knight dam. The younger bull, Sultan's Best, Kreigh & Son place great stress upon, and their judgment is well backed up by the individual worth of the bull. Mr. Bowers sells ten head, all well-bred ones, some particulars regarding which are given elsewhere in this issue. This is a sale that will be well worth attending. The gentlemen making it are all practical and reliable cattlemen and they are sending forward a good lot of cattle. This sale comes the day preceding the Rigg & Glasgow dissolution sale at Galesburg, so that buyers can easily attend both sales and have an opportunity to place values upon practically 100 head of Short-horns. The advertisement will be found elsewhere in this issue. Look it up and write for a catalog to A. J. Ryden, Abingdon, Ill., mentioning The Homestead.

Rigg & Glasgow's Short-horn Sale.

An inspection of the catalog for the Rigg & Glasgow dissolution Short-horn sale at Galesburg, Ill., March 26th, reveals a very attractive lot of pedigrees. An inspection of the cattle reveals an attractive lot of individuals. Mr. Rigg is one of the veteran breeders of Illinois, and were it not that a dissolution of partnership between he and Mr. Glasgow makes necessary the sale of the entire herd, the major portion of the animals offered in this sale would not be priced at any figure. They are a well-bred, thrifty, attractive, producing lot of cattle, and many of the cows will sell with calves at foot. The Clara, Missie, Fancy, Lavender, Emma and Alexandrina tribes are represented in this sale. Thirty-eight head are cataloged, thirty-four cows and heifers and four bulls, including the herd bull, Pride of Linwood, bred by Forbes & Son, and most of the offering of females of breeding age are in calf to this bull. A good type is offered in Peachbud 8th by Baron's Pride and in calf to Pride of Linwood. Emma Prince by Golden Charity Prince, dam Emma 24th, is a good, thick young cow, well along in calf. Many females in the offering are the produce of Lady Mary, one of the best cows ever in the herd of Mr. Rigg or any other breeder, while several of her granddaughters are listed. An extra good cow in this lot is Golden Mary by Imp. Golden Charity Prince, and she is in calf to Pride of Linwood. Her daughter, Golden Mary 3d by Trout Creek Champion, is also listed, and is an attractive proposition. Shenstone Rose, bred to Pride of Linwood, is one of the few daughters of Shenstone Albino ever offered in this country. A heifer of unusual promise is Golden Emma by Golden Charity Prince and out of Emma 24th. Golden Mary 2d by Golden Charity Prince sells with a fine bull calf at foot by Pride of Linwood, while Lavender 26th sells with twin bull calves at foot by the $10,000 Prince Imperial. If one had the time and space to mention each animal individually he could give one a better idea of the value of the offering. These cattle must really be seen to be appreciated. As stated before, this is an absolute dissolution sale, owing to Messrs. Rigg & Glasgow having decided to separate in the business way. Attend this sale. You will find there something that will please you, and it can be secured at your own price. This sale comes the day following that of Messrs. Ryden, Nelson, Kreigh & Son and Bowers at Galesburg, Ill., March 25th, and parties can easily attend both sales, giving them nearly 100 head from which to make selections. Set aside the day and write at once for a copy of the catalog to Rigg & Glasgow, Mt. Sterling, Ill., mentioning The Homestead.

THE FLOWER GARDEN.

To the Editor of The Homestead:

A small corner in the back yard cared for by a lover of flowers is as much a flower garden as acres of beds of elaborate design kept by professional gardeners. This article is written for those who do their own gardening and who, we are sure, derive as much pleasure from their humble grounds as do those whose wealth enables them to employ others to do it for them.

There are two principal styles of gardening. In one the flowers are used in masses to produce effects of color, either in a mass of one color or parts of a more elaborate design. In this the individuality of the plant is lost, and it only makes one in a crowd. In the other style plants are chosen for their beauty, fragrance, curious structure or other individual peculiarity, which is best seen when the plant has a chance to develop its proper form.

Some of the first examples of the bedding style are brilliant and showy, yet our sympathies are with the other or mixed border, at least if confined to one. In bedding, the plants most used require to be grown under glass. In the mixed border there is a succession from the snowdrops, blooming in the last snow of spring, and the colchicum, caught by the first snow of autumn. In this perennials, biennials and annuals all find a place. If confined to one class of plants we would choose herbaceous perennials. Among these is the greatest possible variety, and once planted they need not be disturbed for years. These excellent plants have of late years been crowded aside by the more fashionable ones. Herbaceous perennials may be grown from seed, but it is more satisfactory to secure small plants. We will enumerate some that may be readily obtained and which are excellent, among which are the chrysanthemum, of three colors, red, yellow and white; the old-fashioned, sweet-smelling pink; bleeding hearts; jonquils; yellow Easter flower, known as the golden candlestick; candy tuft; lillies, even the wild ones; peonies; poppies; phlox; violets, and the old-fashioned moss pink, a garden might be made of the different kinds alone there is such a variety, and the list might be extended indefinitely. Hardy bulbs should be planted in autumn and hyacinths, tulips and crocuses may be left in clumps from year to year. Lillies do best if undisturbed. Tender bulbs and tubers should be set in the spring, taken up in the fall and kept through the winter in the cellar. Gladioluses, dahlias, cannas and many others are worth the trouble. Annuals are tender and hardy. The tender ones, such as Balam's cockscombs, etc., need to be started under glass and not transplanted until the weather is warm. Many others may be sown in the open ground as soon as it can be worked. Everyone knows the most common kind, and for the less common kinds, of which new ones come every year, one may consult the catalogs. S. E. M.

THE NORTH & ROBINSON COMPANY ANNUAL SALE

BIG, RUGGED AND CAREFULLY SELECTED

PERCHERON, BELGIAN and SHIRE STALLIONS and MARES

Will be held in Bradstreet & Clemen's sale barn at **GRAND ISLAND, NEBRASKA, THURSDAY AND FRIDAY, MARCH 20-21**

TWENTY-FIVE big-boned, rugged young stallions, including the prize-winning Adelbert, by the champion Olbert and said by many to be the making of as good a horse as his sire. A fine lot of young stallions that are right and fit to head the best kinds of studs. They are nearly all Nebraska grown, and on one of the greatest breeding establishments in the entire country. They are grown where climatic conditions are of the very best, and on the best feeds ever grown for the production of the highest type horses. See these ton and over colts. They are the kind that please. We have listed horses for this sale that will please any man in search of the very best. See them.

THE forty mares offered will include a number that were prize-winners at the Nebraska State Fair last season, and the dozen biggest mares ever sold in one auction will be here. The 12 weigh 16 tons. Parties looking for big, sound mares that are mated and safe in foal to as good stallions as there are in the country today will do well to see this offering. We do not believe that as good values will be had in mares anywhere this season, and the man East or West, North or South can well afford to attend this sale. Everything that goes in the sale ring will sell. We raise these horses to sell, and you will not be dealing fair with yourself if you do not see them.

The catalogs are ready, and we want every horseman to have one. Col. Z. S. Branson, Auctioneer. Mention The Homestead and address at once.

THE NORTH & ROBINSON COMPANY, GRAND ISLAND, NEBRASKA

100 SHORT-HORNS AT PUBLIC SALE 100

GALESBURG, ILLINOIS, MARCH 25 AND 26

50 HEAD. 12 BULLS

From the herds of A. J. Ryden, Abingdon, Ill., Chas. T. Nelson, Blandinsville, Ill., Wm. Kreigh & Son, Knoxville, Ill., and H. G. Bowers, Elmwood, Ill., will be sold

TUESDAY, MARCH 25, 1913

EACH contributor is sending forward a well-bred, desirable lot of cattle. There will be twelve good young bulls in this offering including some grandsons of Whitehall Sultan that are herd-heading propositions. A breeding lot of cattle, the increase from reliable breeding herds. Breeders and farmers attend this sale. You will find here what you need in Short-horn cattle. Remember that at this sale and the sale the day following practically 100 head of cattle are to be sold, so bargains will be plentiful. Send for the catalog today. Mention The Homestead and address

A. J. RYDEN, Abingdon, Ill.

A DISPERSION SALE

of the herd of Rigg & Glasgow, Mt. Sterling, Ill., owing to a dissolution of partnership, will be made

WEDNESDAY, MARCH 26, 1913

A CHOICELY bred lot of cattle is listed for this sale, representatives of the Secret, Lavender, Fancy, Emma, Clara, Missie, Rosemary and other popular families. Daughters of Trout Creek Champion, Imp. Pennan Diamond, Golden Charity Prince, Shenstone Albino, King Cupbearer and other good sires are in the list, and many sell with calves at foot while all of breeding age are in calf to Pride of Linwood. Ten extra high-class two-year-old heifers are in the sale. Some strong bull propositions including the two-year-old Sultan Archer, a grandson of Whitehall Sultan and Ceremonious Archer. Remember the entire herd is to be sold. Nothing kept back. Mention The Homestead and write for a copy of the catalog to

CHICAGO & NORTH-WESTERN
CHICAGO, MIL. & ST. PAUL

A LIFETIME HAS BEEN DEVOTED TOWARD MAKING FOR ANOKA A NAME FOR ITS PRODUCTION UNEXCELLED IN ANY COUNTRY

Waukesha, Wisconsin, March 5, 1913.

DEAR SIR:—

We invite your attention again to our regular annual sale of Scotch pedigreed Short-horns. The date is Wednesday, April 2d, and we will sell forty females and fourteen bulls. This number includes seven females and one bull from Heart's Delight Farm, W. H. Miner, proprietor, Chazy, N. Y.

We wish to assure you before saying anything further, that the present offering will suit you and interest you if you are in the market for a high-class young herd bull or well-bred females that are very choice individually. About eighty per cent of these cattle are of Whitehall Sultan line of breeding. Please stop and consider what this amounts to. You can take the reports of the Short-horn Show at the International for the last five years, and you will find that more than fifty per cent of all the prize winners at this show carried the blood of this one sire. Anoka was the home of Whitehall Sultan for eight years, and it was from here that fifty sons and daughters have been sold for over $50,000. These prices have been justified by the results. We would like to say in as few words as possible something to convey to you a correct idea of the general quality of our coming offering, and it is this: They are, taken all together, the best lot ever sold from Anoka and a Short-horn Show that we will be proud to have you see. To any one who buys ten head will pay the freight to any point in North America.

We are pleased to submit to you, Representative of The Homestead Johnson's appraisal of the cattle, which will appear in this and subsequent issues and also to mail to you the catalog on application. Yours truly,

ANOKA FARMS, by F. W. Harding, President.

HANNA'S SHORT-HORN OFFERING
CHICAGO, ILL., FRIDAY, APRIL 4th
40 HEAD---10 BULLS, SONS AND GRANDSONS OF IMP. VILLAGER

NINE daughters of Villager are also listed, and all females of breeding age are bred to him or one of his sires, Village Denmark and Village King. Villager is proving himself one of the great sires of the breed, having to his credit at the 1912 shows the undefeated senior and junior heifer calves, and the undefeated calf and young herd. Listed for the sale are many of our best show and breeding propositions. You will like the cattle. No better lot will be offered this year. Herd heading bulls of the choicest breeding. Females that will win in any company, and breeding cattle to strengthen any herd. Write for the catalog, mentioning The Homestead, to

A. F. HAGER'S MAPLE LAWN HEREFORDS
at Public Auction, AVOCA, IOWA, THURSDAY, MARCH 20TH

Cols. Kraschel and Reppert, Auctioneers.

54 HEAD 54

Twenty-six choice bulls, twenty-eight cows and heifers. Included will be my great herd bull, ST. ELMO R., a bull of unsurpassed merit as a sire and an individual. This is one of the greatest Hereford herd bulls offered either publicly or privately in recent years. There will be twenty-four young bulls in this sale that are as good as will be sold in any sale this spring. My splendid Maple Lawn herd is regarded as one of the greatest today in the West, and I am not ashamed to invite the most critical to my sale as I know they will be satisfied with my cattle. I am selling a grand, good lot of cows and heifers, all bred and safe in calf. No better offering will be sold this year. Write for catalog at once. Address

TRUMANS' PIONEER STUD FARM, BUSHNELL, ILLINOIS.

OUR FIFTH ANNUAL

30-Day Sale Starts March 1st

THE offering consists of a choice selection of imported and American-bred Percheron and Shire stallions and mares. We were never better equipped to furnish the most discriminating buyers with first-class stallions than we are at present. Our horses were imported last October. Are perfectly acclimated, are two and three years old, all dark colors, weighing from 1,800 to 2,200 pounds. The mares are of the large brood type of serviceable age and are in foal. We give our customers fresh, clean, sound horses each year. They are not stale from overfitting. They are the right type with plenty of size and bone. We sell our horses at prices any farmer can pay. We have a large assortment to select from. Every animal guaranteed sound and a satisfactory breeder. If you want the best at prices that defy competition do not fail to visit us before buying elsewhere. We have a few good aged horses that have been replaced with two year olds, sound and good breeders, that will be sold very cheap. Terms to suit any one. Come and see us or write today for full particulars. Homewood is conveniently located 23 miles south of Chicago on Big Four and I. C. R. R., with trains to and from the city every hour. Barns near station. Bell phone, Homewood 58 W. Address

S. METZ & SONS, Homewood Stock Farm, Homewood, Illinois.

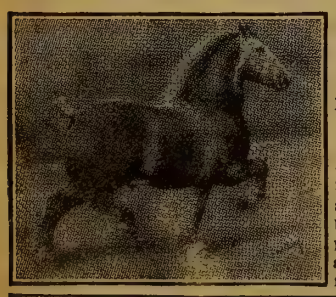
J. LEITCH & SONS, LA FAYETTE, ILLINOIS

Located midway between Rock Island and Peoria, Ill., on C. R. I. & P. Ry.

LARGEST IMPORTERS OF CLYDESDALES IN THE UNITED STATES.



W. A. LANG & CO.,

Greeley, Delaware County, Iowa.

Importers of BELGIAN and PERCHERON STALLIONS and MARES.

We wish to announce to the buying public that we will now, as in the past, give you more good, sound, young horses for the money than you can get elsewhere. We do not advertise cheap stock because we do not think the best breeders want that kind, but we will sell you the good ones at as reasonable margin of profit as possible, and do a remunerative business. All horses are backed up by our GILT EDGE GUARANTEE. Write for full particulars.

OAKLAWN STOCK FARM

Breeds and Imports Percheron, Belgian and Shire Stallions and Mares.

GOOD enough to win grand championships at the Iowa State Fair. We won grand champion Belgian stallion at Des Moines, 1912. If you want heavy-boned draft stallions or mares write me, mentioning The Homestead.

GEORGE EGGERT, - NEWTON, IOWA.

---

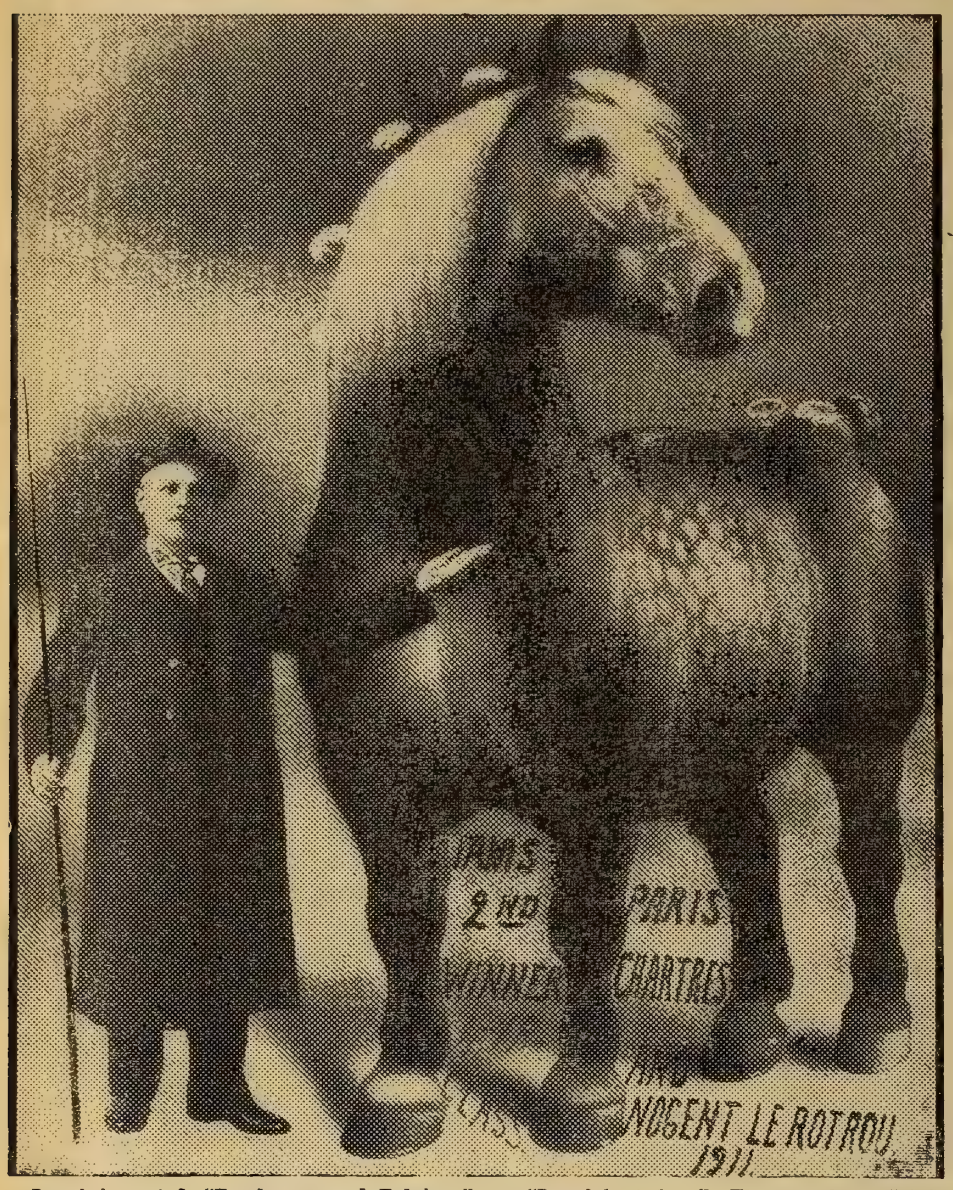
Frank Iams' Show Horses



Iams' imported "Percherons and Belgians" are "Iams' best buy." They need no "state stallion law" to make them sound. They are all sound "bellringers." Ikey buyer:—Get into **"Iams' money-saving game."** See **Iams** and his **"peaches and cream"** imported stallions, "prize winners," that he sells at **$1,000** and **$1,400** (few higher). Imported mares—**"topnotchers"**—at **$700** and **$1,000. "Ikey,"** be a **"wise guy"**—buy **"show horses" of Iams**—who has crossed the ocean **50 times** for horses and **sold 5,444 registered horses. "Iams' 30 years of success"** make him a safe man to buy from at **special democratic low prices.** "Everybody is Doing It."

are **"Model Drafters" of Big Size, Quality and Finish.**—**"Iams' thirty-one years' of success"** makes it safe for you to buy the best horses, for they are "up-to-the-minute" and 10 years in advance. They are the **"drafty, big-boned tops"—nifty, big "black boys"**—the **real "medal winners"**—sensational **show and business horses of note, "ripe peaches"** from the **"select 400."** Big, classy **"peaches and cream" "black boys."** The **"Iams brand"** of drafty **"top-notchers."** Iams' **importation of Percheron and Belgian**

Stallions and Mares are in the "Pink of Condition"

and ready for a good selling. **"Ikey Boy,"** smile sweetly, and hundreds of **Iams'** satisfied customers **"will sit up and take notice"** that **Iams,** the **"king pin"** horse importer, is still **"doing business"** at the **"old stand."** Iams is **"pushing"** his horses to the front. The big **"peaches and cream" "stallions and mares"** are **attractions** that can't be **overlooked.** Iams **mesmerizes** buyers with **"real drafters"** at **"bargain prices"** and having the **"horses as advertised."** Iams' **"competitors"** and "hammer knockers" are **"boosting** Iams" by their "knocks" until **now** he is **known** as the **"millionaire horseman,"** and on **"Easy Street,"** and growing fast. **Ikey, "come on along"** and **sing Iams' song.** He is selling these **"aristocratic," fancy "black boys" cheaper** than ever—**or better horses for less money—$1,000 and $1,400** (few little higher).

80 Percheron and Belgian Stallions and Mares 80

They are **"models"—"humdingers."** They are two to five years old, weigh 1,700 to 2,500 lbs.; 80 per cent blacks, 50 per cent ton horses. Many **"prize winners"** and **"gold medal horses."** Big, **drafty "topnotchers,"** with big bone, quality, style, finish and **action to burn.** They are **"eye-openers."** Larger and better horses than seen elsewhere. Big **"business propositions"** that make **"the wheels work fast"** under a **"buyer's hat."** **"Georgie, dear," Iams** made a **"big killing"** by buying his horses in Europe in **October and November, 1912. "Dry weather," "bad crops," "war scare," "close money,"** and **"Iams' cash"** caused the **"prize winners" and "tops"** to be thrown on the market for a **"good selling."** Iams **"cut the melon"** and bought the **"rippers"** at **"knock-out prices."** Iams will give his customers the benefit of his **"good buy." "Ikey boy," come on down town and see Iams** and the **nifty, big "black boys" and "sensational," low, democratic prices. "Everybody's Doin' It."** Then get into **Iams' "get-rich wagon"** and save **$1,000** on a **"top stallion"** (and you wear the diamonds). Iams is a **"big fly in the ointment"** in the horse world. "He keeps the gang guessing." **Iams** sells **"imported horses only"**—(they win 90 per cent of prizes at big horse shows). No **"American-bred full bloods"** with questionable breeding—no **"auction stuff"** or **"peddlers' horses"**—only **"choice drafters"** of big size, bone, quality and finish. **"Iams' horse show"** makes you **"sit up and take notice"** and buy a $3,000 stallion at $1,000 or $1,500. Then your sweetheart wears the diamonds. Iams' imported horses are **"registered," "approved," "branded," "inspected"** and **"certificate stamped O. K."** by governments of **"France and U. S. A."** All of Iams' stallions and mares have been "inspected" by a Nebraska Deputy State V. S. and a **certificate** of **"health and soundness"** is given with **each horse.** Iams has the **"crack stallions and mares"** you **"read about."** Buy horses of Iams and you won't **"get stung" in horse or price. "Dolly D,"** waltz me around **once** again, **"Ikey;"** land me at **Iams' box office and importing barns.** Full to "the roof" with **"black boys"** (all must be sold). **Reduced prices.** All the

World Knows Iams and His "Peaches and Cream" Horses.

1912 was Iams' best business year. **1913 promises to be a bumper year to Iams and his customers.** He saved **$300,000 to stallion buyers** in 1912. Watch **"Iams' smoke in 1913."** Iams' 30 years **of successful business** make him a **safe man** to do business with. **Iams sells horses "on honor."** A boy or a lady can buy as cheap as a man. **"Ikey,"** be the **"wise guy."** Buy imported **stallions of Iams.** He is **reliable** and a **"live wire"** for **big bargains.** Iams' 1913 **horse catalog** is an "eye-opener." It has

"A Laugh" and a $1,000 Bargain in Every Line.

A "bunch of gold," the "book of books," to stallion and mare buyers. It is full of **"wide-as-a-wagon drafters"**—the real **"peaches and cream"** stallions. It shows **largest imported stallions and mares** in the United States, **"true to life," and truths, facts, "business propositions,"** and 100 illustrations of **"topnotchers"** and the **"tricks of stallion peddlers"** and **"auction block"** salesmen. It is the **finest, most elaborate and original up-to-date book** in the world. **Iams, the "square deal" horseman,** makes every statement in **ad or catalog good**—or you get the $500 he hangs up. **Iams** guarantees to sell you a

Better Imported Stallion at $1,000 and $1,400

(few higher) than is sold to **stock companies** for $2,500 to $5,000. Imported mares, $700 and $1,000. Iams gives 60 per cent breeding guarantee; pays freight on horse and fare of one buyer. He can furnish $1,500 insurance. **IAMS buys and sells every stallion himself.** Saves buyers $1,000 in **commissions** and **middlemen's profits.** He buys stallions by **"train load."** He speaks the languages—(saving 20 per cent). He is **not** in the **"stallion trust."** He pays no **"slick salesman"** a commission to **help "do you."** He has no **two to ten partners**—to share profits. He **"pays cash"** for his horses

Iams Sells "Top-Notchers" by "Hot Advertising"

and having **"the goods."** **"Big Moike,"**leave your **"happy"** home and buy a **"top"** stallion or pair of **imported mares** (of **Iams**) that bring colts that sell at $500 each. **"Papa,"** don't let those **"auction men" "hand you a lemon"** in one of those **"so-called" "American full bloods"** of **questionable breeding.** Buy an **imported horse of Iams,** the **"reliable horseman."** Then we will **"all wear diamonds."** Iams' **"selling clothes" fit all buyers.** Write for **Iams' million-dollar horse catalog.** Iams won't let you go without a **peaches and cream** stallion or mare. **"He sells the tails off them."** Iams' guarantees are backed by **"half million dollars."** References—1st National and Omaha National Banks, Omaha; Packers' National Bank, So. Omaha; Citizens' State, 1st State and St. Paul State Banks, **St. Paul, Neb.** Iams buys big ad space because it is cheaper than flannel-mouthed horse salesmen.

LEWIS and ATLANTIC, IOWA,

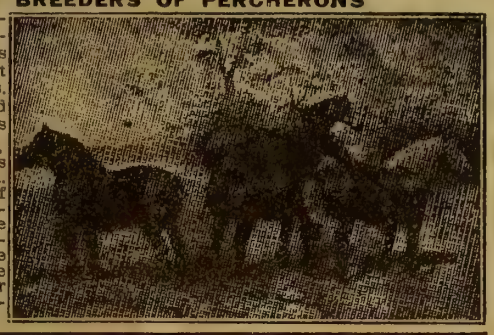
BREEDERS and IMPORTERS

PERCHERON AND SHIRE STALLIONS AND MARES

One importation arrived October 25 and are now offered for sale. These are the best lot of horses that have crossed the Atlantic this year. Another importation now on the road. Write or come and see our horses.

MAASDAM & WHEELER, Fairfield, Iowa

IMPORTERS AND BREEDERS OF PERCHERONS



Our new importation of 81 Percherons arrived in Fairfield September 18th. Forty weanlings will soon arrive, making about 125 imported stallions and mares. These with our 75 American-bred stallions and mares of all ages form a magnificent array of big, heavy-boned, sound Percherons from which buyers may select. We have by far the best lot of Percherons on hand at the present time that we have had since engaging in the importing business. We know we can please you in a horse and our prices are very reasonable. Visit us or write us for what you want, mentioning the Homestead.

PERCHERON, BELGIAN AND SHIRE STALLIONS AND MARES

GENTLEMAN, the time is at hand when you can no longer stand these scrub, blemished, mean dispositioned horses with bad conformation and loaded with fat. We have sold stallions to customers that like to get rid of that kind. They paid, big, long prices and you can now buy them for most anything you offer. Let us show you the right kind, from 1,800 to 2,200 pounds at the right price. Reliable guarantee and state inspected. We also have a few imported mares in foal weighing from 1,900 to 2,200 pounds. Will pay $600 C. O. D. to match them up. We were born and raised in France and appreciate good horses. Reference, 1st National Bank, Seward, Nebraska. Address

When writing to advertisers please mention The Homestead.

Tell Me How Many Head of Stock You Have and—

I'll feed them 60 days before you pay. I'll show you how to make your farm animals grow faster—thrive better—put on more flesh on no more feed—make you more money.

I'll Rid Them of Worms or No Pay

I'll drive out the blood-sucking, life-sapping, disease-breeding parasites which multiply in the stomach and intestines, killing off your hogs and sheep, starving your horses and cattle and stealing your feed and profits. I'll send you enough Sal-Vet to last all your stock 60 days. Simply put it where all your farm animals can run to it freely and they will doctor themselves. Send no money—just the coupon.

Sidney R. Feil President.

What SAL-VET Is and Does

Sal-Vet is a wonder-working medicated salt which completely rids farm animals of their greatest enemies — the stomach and intestinal worms. These deadly pests are the cause of 90% of all live-stock diseases. They keep farm stock in a poor, weakened, money-losing condition—they are the first step to hog cholera, swine plague, horse plague and other contagious diseases.

How SAL-VET Prevents Diseases

Sal-Vet prevents heavy losses when disease breaks out in your neighborhood because it kills and expels these deadly, life-sapping pests and puts every animal on your farm in a healthy, vigorous, worm-free condition—enabling them to better resist these deadly plagues. It sharpens the appetite, improves digestion and makes all stock grow fast into profit because it helps them get the good of all their food. Being a salt, animals like it and run to it freely—and

THEY DOCTOR THEMSELVES!

It requires no starving—no drenching—no dosing—no trouble at all. Leading agricultural colleges and all prominent live stock authorities endorse it.

Let me send you a 60-day supply without a penny of pay in advance.

Send No Money—Just the Coupon

All I ask you to do is to fill out the coupon, tell me how many head of stock you have and mail it to me today. I'll ship you enough Sal-Vet to last all your stock 60 days. You simply pay the freight charges when it arrives and at the end of 60 days report results. If Sal-Vet does not do what I claim you won't owe me a penny. Send the coupon NOW. Address

SIDNEY R. FEIL, Pres.
THE S. R. FEIL CO.
Dept. IH 3-13-13 Cleveland, O.

Ship me enough Sal-Vet to last my stock 60 days. I will pay the freight charges when it arrives, report results in 60 days and will then pay for it if it does what you claim. If it does not, you are to cancel the charge.

60-day shipments are based on 1 lb. of Sal-Vet for each hog and sheep and 4 lbs. for each horse and head of cattle, as near as we can come without breaking regular pkgs.

Proof That Proves
From Actual Users

"Sal Vet has been of great service to us; it has kept our hogs and pigs free from worms and, in addition, proved to be a splendid tonic."—J. B. ESPY, Agriculturist, Southeast Alabama Experiment Station, Abbeville, Ala.

"A lot of hogs died in this county from swine plague or cholera. Some of them were within three miles of me, but I have been feeding Sal-Vet, and have not lost a single hog. They are all doing well, eat all I give them and have good appetite for more."—D. A. ROSS, Kingman, Kans., Breeder of Pure Bred Poland Chinas.

"For their own good, I would recommend Sal-Vet to all sheep men. It will destroy every stomach worm in the flock and keep your sheep and lambs free from them and at the same time keep your flock in the pink of condition and health."—ROBERT S. BLASTOCK, Mgr. Sheep Dept., Walnut Stock Farm, Donerail, Ky.

"Your Sal-Vet has done all that you claim and perhaps more. Hog cholera has been all around me and I have had not one sick hog. I cannot praise Sal-Vet too highly, and I do not hesitate to recommend it to all hog raisers."—O. A. KELLOGG, Troy Grove, Ill.

"Sal-Vet is a wonder. I had fourteen shoats that would not fatten. I fed them Sal-Vet and I was very much surprised to see come from them rolls of worms from twelve to fourteen inches long. These shoats began to mend at once and are now doing finely."—J. E. SNELL, Flora, Ind.

"I am very much pleased with the results from feeding Sal-Vet. I have had no sick hogs, while my next neighbor has lost over thirty from cholera. I surely will never be without Sal-Vet on my place again."—ROY O. TRUITT, Lincoln City, Delaware.

"Have been feeding Sal-Vet for the past sixty days, and am much pleased to say that my pigs did better this winter than ever before. My neighbors have been feeding their hogs with other remedies, and their hogs have been dying right along, while I have not lost a single one of my Sal-Vet fed pigs."—(Signed) D. S. JONES, Venedocia, Ohio.

"As a stock tonic and worm remedy I do not hesitate to say that Sal-Vet is unsurpassed by any compound I have ever given a trial; and as you well know, my business as Veterinary Editor of the National Stockman & Farmer, and the Tribune-Farmer of New York, requires me to test many tonics and remedies for animal ailments. You are at perfect liberty to say, that I consider Sal-Vet one of the most valuable compounds as yet discovered for use by the live stock owners of this country, and were it to be used more generally the worm family in the animal kingdom would soon be nothing to fear, and colts in horses would be far less in evidence than at present."—C. D. SMEAD, V. S., Hector, N. Y., New York State Veterinarian, Veterinary Editor New York Tribune-Farmer, Veterinary Editor National Stockman and Farmer.

"After feeding Sal-Vet to my horses and cows for a month, I am glad to give this preparation my hearty endorsement. In order to have reliable data before expressing my opinon about Sal-Vet, I gave it to 21 cows in their feed for a month. Eight others were given no Sal-Vet at this time. At the end of thirty days test, the 21 cows that had been given Sal-Vet showed a tone and condition of health that was really remarkable. The eight that received no Sal-Vet have a more or less listless appearance, showing poor nutrition doubtless due to worms or indigestion. Outside of Sal-Vet all of the 29 cows received the same ration."—L. H. COOCH, Editor Practical Farmer, Philadelphia, Pa.

PRICES 40 lbs., $2.25; 100 lbs., $5.00; 200 lbs., $9.00; 300 lbs., $13.00; 500 lbs., $21.12. No orders filled for less than 40 lbs. Never sold in bulk; only in Trade-Marked Sal-Vet packages.

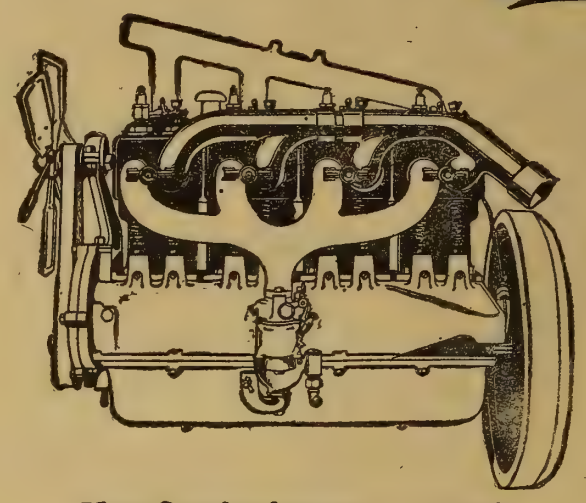
VOL. LVIII. NO. 12 DES MOINES, IOWA, MARCH 20, 1913. WHOLE NO. 2893

Overland



How Overland motors are made

All Overland motors are designed by Overland men—made by Overland men—and made in Overland factories. We will build 40,000 motors this year. No other automobile manufacturer will build as many of this type. That is why we can build them better, and for less cost. We employ the most skilled motor builders in America.

Following are a few of the most important facts about the Overland motor.

Cylinders have large water-jackets and are cast singly, increasing cooling efficiency with the advantage of being able to replace a single cylinder at low cost should an accident occur. The crank shaft and connecting rods and all other forgings are of high carbon manganese steel.

All bearings, cylinders, pistons and rings are ground to accurate and tested smoothness, insuring long life, freedom from wear and positive compression.

All the wearing surfaces of the valves are ground to a one-thousandth part of an inch. Owing to their peculiar design and large size they enable the motor to develop at least fifteen per cent more horsepower than any other motor of the same bore and stroke.

The cam shafts are drop-forged (in our own drop-forge plant, which is the largest in the industry) oil-treated and case-hardened. They are ground and machined automatically, insuring positive accuracy in the relative position of one cam to another.

This is the only car of its class provided with a five-bearing crank shaft. This crank shaft is drop-forged from one piece of carbon manganese steel and rotates in five bearings of unusually liberal size insuring quietness and extreme long life.

The crank cases are cast in two sections, of the finest grade of aluminum alloy attainable—and cast in our own foundry.

No other motor in the world is given a more severe test and thorough inspection. The engine is belted up for two hours, and driven by other than its own power to limber it up so that it will start easily. Then it is put onto the block and run from 8 to 16 hours under its own power.

The Importance of a Powerful Motor

As the motor is the most important part of a car, it is safe to assume that you can judge a car by the performance of its motor. Therefore, be guided and informed by the following information.

Every practical farmer knows the value of a good motor in an automobile. He knows, too, from experience, what constitutes a good motor and what is expected of it. He wants power, economy and silence.

The motor is the most expensive single unit of the Overland car. It has a 4" bore and a 4½" stroke. It is the most efficient 30 horsepower motor made. We say efficient for it has, by demonstration in tens of thousands of cars, proven to be the best for your specific purposes.

It is exceptionally economical to operate—using less fuel per mile than any other motor of equal size.

It is remarkably powerful, developing forty to fifty miles an hour with ease; and over your kind of roads, without eating up an unnecessary and costly quantity of gasoline.

It is the only motor of its size made with a five bearing crankshaft which makes for real smoothness, silence and ease when in operation. This feature is only found on very high priced cars.

It is remarkably simple. It is practically frictionless. Requires no coaxing or continual adjusting. In fact, you seldom have to lift the hood. Is always obedient.

And the self-starting feature adds the final touch of perfection. Just throw a little lever and you're off. Your daughter can start, operate and drive an Overland as well and as easily as you can. It will always start in bitter cold and freezing weather as quickly as in the summer—by just switching the little lever on the dash.

So we ask you to judge the exceptional value of this car by the exceptional efficiency of its motor.

This big, powerful, comfortable touring car costs you 30% less than any other similar car made.

We have some very interesting books we would like to send you. They are free. Write us for a set today.

The Iowa Homestead

DES MOINES, IOWA, THURSDAY, MARCH 20, 1913.

Beef Production and Soil Fertility

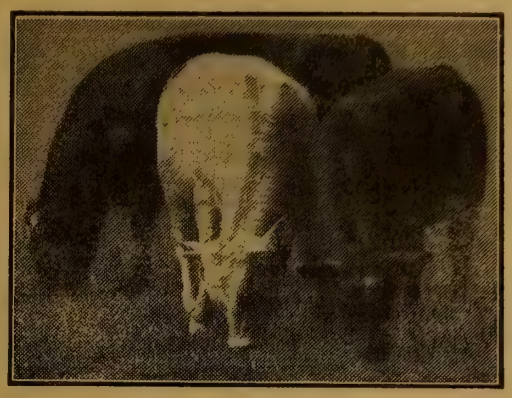
Soil Enrichment a Most Important Secondary Factor in Feeding Operations—The Policy of Raising One's Own Feeders the Most Profitable.

IS IT PROFITABLE for a beef feeder to raise the calves that he will fatten for market? A prominent Indiana cattleman asserts that where the farmer is located proximate to a good central market that the raising and finishing of beef calves are profitable. Under special conditions of a nearby supply of relatively cheap feeder calves of the desirable type he declares that it is more profitable to buy the youngsters than to try to raise them. This Hoosier feeder says that whereas it cost him $22 per animal to raise a good yearling that he has been able to buy calves of identical quality and type in his neighborhood for $18 per head. In consequence he has abandoned his breeding operations and has taken to buying up and fattening feeder calves.

Quite generally in the past the raising of feeder calves and the fitting of them for market have been considered as two distinct operations to be handled by separate farmers. The professional cattle feeder has always preferred to buy his animals rather than to attempt to raise them. His interests in the cattle-raising industry was limited to obtaining a sufficient number of animals of proper quality and at a low enough price to enable him to fit them for market at a profit. However, a tendency is being noted in certain beef sections of the country for the feeders to raise their own fattening cattle. In regions of the country where much of the land is stony, rough, or too steep to cultivate, but is adapted to the production of grass, the growing of feeder cattle may prove profitable. On the other hand there are many instances where the raising and feeding of animals on the same farm would bring greater returns in money value, besides adding to the permanent fertility of the soil. The farmer who has as many as thirty breeding cows on his farm should make it a rule to fatten their offspring, as he can seldom afford to sell the calves to the professional feeder. Such a feeder usually makes money on the fattening process and the man who raises calves in sufficient numbers should keep this profit on the home farm. The farmer who has from eight to twelve calves or steers ready for the feed lot will ordinarily find it profitable to buy up enough animals to fill out a load so that he can tone up all of these cattle to market bloom on his home farm.

Recent results obtained at the Alabama Experiment Station show that an attractive profit is possible in the raising and feeding of beef calves where intensive management is practiced. A test was run to determine the cost of finishing high-grade calves for market on different feeds when the animals were less than one year old. Three lots of calves were kept for four months on a basal ration of cottonseed hulls and alfalfa hay. Lot 1, on a supplementary ration of cottonseed meal accomplished an average daily gain of 1.71 pounds at a cost of 6.22 cents per pound; Lot 2, with cottonseed meal and corn-cob meal in the proportion of two to one, made an average daily gain of 1.76 pounds at a cost of 6.19 cents a pound; while Lot 3, with cottonseed meal and corn-cob meal in the proportion of one to two, made a gain of 1.83 pounds at a cost of 6.83 cents a pound. The third lot gave a larger percentage of dressed weight and sold for a higher price, but not for enough to pay for the extra cost of feed.

Furthermore fifty-two calves were fattened for the spring market on a ration of cottonseed meal, cottonseed hulls, and mixed pea-vine hay. During a feeding period that lasted 112 days these youngsters made a daily gain of 1.24 pounds at a cost of 6.97 cents per pound. At the end of the period each calf sold for a net profit of $3.50. In another test thirty-four calves were wintered on cottonseed meal and hulls, corn chop, and alfalfa hay. The average daily gain accomplished per animal was 1.13 pounds at a cost of 8.63 cents per pound. Toward the end of March these youngsters were turned out to pasture and



TURNING GRASS INTO POUNDS.

for the succeeding eighty-nine days each calf gained 1.3 pounds at a cost of 4.84 cents per pound. The net profit per fat calf amounted to $1.86

These results are of significance to the northern farmer, as they indicate the profit to be realized in a comparatively new phase of the beef industry. Of course, the nutrients used in these tests will be more expensive under northern conditions unless it is possible for the operator to use some cheaper substitutes. At any rate a farmer may expect to realize a reasonable profit on beef calves when he raises and fattens them on his farm and sells them when they are twelve to fourteen months old. An increased profit will result where the calves are fed corn-and-cob meal as well as cottonseed meal, cottonseed hulls and pea-vine hay. It is apparently more profitable to feed a heavy ration and to sell the calves at the end of the winter months where the prices are normally high than to hold them until the early summer months.

A PROFITABLE PASTURE ORNAMENT.

MONEY-MAKERS EVERY TIME.

The connection between feeding operations and the maintenance of soil fertility is very close. There is no excuse for the twentieth century farmer going about mourning because his annual crop yield is on the decrease and his soil is verging on the worn-out condition. With the average well-fed dairy cow producing about fifteen tons of manure per year, with the ordinary ten-hundred-pound steer yielding a ton of manure a month when he is on full feed, with the farm hogs and sheep adding their quota to the annual manure pile there appears to be small reason why the farm acres should not grow richer rather than poorer. The farmer who properly conserves his manure against leaching, weathering and "fire fanging," and returns it to the field in good condition is able to put back on the land about 60 or 70 per cent of the plant food removed by the crops where only home-grown crops are fed on the farm. The farmer who purchases quite a bit of concentrates and grains of a high protein content or who trades a portion of the home-grown grains for materials of this character which are to be fed on the farm is able to practically maintain a balance between the outgo and income of plant food in his soils.

The farmer who buys raw rock phosphate at approximately $8 a ton and applies it to his soils in conjuction with well-rotted stable manure can appreciably improve the fertility of the soils. Applications of about fifty pounds of phosphate per ton of manure work wonders in rejuvenating mined-out lands that are suffering from plant food starvation.

Sooner or later every farmer in the corn belt must become familiar with the fact that his soil is more apt to be deficient in phosphoric acid than it is in any other element of fertility. A soil may be ever so rich in other elements of fertility, if the phosphoric content falls below a certain point then we must certainly have a degree of crop starvation. If it is ever remembered that a sensible system of feeding means restoring to the soil at least three-fourths of the plant food taken from it by the crop and if in addition each farmer can be given to understand that phosphorus is the chief lack in his soil we need have no fear that the farms of the central West will, like eastern lands, fall below the point of profitable production. Just as England and Germany have doubled the production of their land, so the farmers of the corn belt have it within their easy reach to greatly increase the annual profits from the acre by a sensible system of live stock production combined with a scientific application of the right kind of fertility. More than that is the consideration that the successful management of live stock contributes in the highest degree to the making of the best type of citizenship. It creates the kind of environment that is needed to keep more of our boys in sympathy with farm affairs. In other words live stock raising sanely carried out harmonizes more completely with the maintenance of ideal social standards as applied to the home and to the community than does the policy of farm mining which is after all the real name for grain growing. It goes without saying that these virtues cannot attach to the live stock industry so long as the scrub or misfit animal is enthroned and unless the constant effort is made to effect improvement in the animal form both in grades and pure breds from generation to generation.

THE HOMESTEAD

A PRACTICAL JOURNAL for the FARMER, STOCKMAN, FRUIT GROWER, POULTRYMAN, GARDENER, and HOUSEKEEPER

BY JAMES M. PIERCE

JAMES ATKINSON, Editor-in-Chief

ESTABLISHED IN 1855

Entered at Des Moines Postoffice as second-class matter

PUBLISHED EVERY THURSDAY

SUBSCRIPTION RATES—Single subscriptions, $1 a year; ten copies one year, $10, and an extra copy to getter up of club. In clubs of fifty or more, 30 cents a year. Subscription price, in Canada, $1.50 a year. Subscription price to other foreign countries, $2 a year. Remit by draft, registered letter, postoffice or express money order. In renewing subscription, use same name and initials as address on paper, or explain why you change. In changing your postoffice address, send your old address as well as the new. Errors in address or failure to receive paper within two weeks should be promptly reported to the publisher.

Address all communications and business letters to

PLANNING A NEW HOME.

Seven weeks have elapsed since the publishing plant of The Homestead was partially destroyed by fire. The weeks have been busy ones. The chaos which confronted us on the morning of February 3d, as the firemen fought the flames in zero weather, has disappeared, succeeded by order. Thanks to an efficient organization, The Homestead has been issued from its own presses practically on time and with every line of editorial and advertising matter scheduled. And now, as spring comes on apace, the outlook is still more promising. Carloads of new type and new machinery are arriving and being unloaded in the rebuilt plant, so that by the first of April The Homestead will once more have the most complete and the best equipped publishing plant of any agricultural weekly in the United States.

How much of the success which has crowned the labors of the past seven weeks is due to the cheering encouragement of friends, near and far, it would be impossible for me to say, but no single factor has been more important. Dark days have been made bright by rays of friendship; steep places have been leveled by friendly counsel; discouragements have disappeared before tangible evidences of a friendship greater and farther reaching than I had ever hoped or dreamed. On one or two previous occasions I have taken the liberty of printing brief extracts from characteristically friendly letters. I cannot refrain from adding a few more to the cheering symposium. I have before me, as I write, three letters, selected at random from the many received in a single mail. Here, for instance, is one from a valued subscriber in Missouri typical of many of equal good cheer and comfort:

Elmo, Mo., March 10.—The Iowa Homestead, Des Moines, Iowa. Dear Gentlemen: I have been on your list for a great many years and have always believed in The Iowa Homestead. I know it will live on after I am gone and I hope it will, for the people need it. Its value cannot be estimated. Our sympathy is yours. May good health be your portion for years to come. Yours respectfully, R. T. Lamar.

Such letters spur a publisher to still greater activity and make me realize more and more the important responsibility devolving upon me. It is with this feeling that I pass along to my readers the equally valued letter from a Nebraska subscriber, who put his friendship to the test by sending the paid-in-advance subscriptions of his neighbors, writing thus cheeringly:

Holdrege, Neb., March 12.—Iowa Homestead, Des Moines, Iowa. Gentlemen: I believe that it is the duty of every man in these agricultural states to provide his friends and children with The Iowa Homestead. The moral tone is high and the practical instruction which all can get from the publication is worth a vast sum of money from an educational standpoint. It is simply in the hopes of being of some benefit to the young generation that I occasionally go out and induce my neighbors to subscribe for The Homestead. With best wishes. I am yours truly, C. L. Morse.

And last, but by no means least, this letter from another Nebraskan, who appreciates the responsibility weighing upon the publisher who hopes to be a factor in the uplift of every home into which his paper enters:

Lushton, Neb., March 10.—James M. Pierce, publisher Iowa Homestead, Des Moines, Iowa. Dear Mr. Pierce: Of course I want The Homestead, because I consider it the best farm and stock paper published. I cannot just fill out the application blank and send my check without saying a word in favor of its sterling worth. I consider your eulogy of Col. George P. Bellows worth three or four times the price of the subscription. I am sorry indeed to hear of your recent fire, but rejoice exceedingly to know that the future Homestead will be placed upon a larger scale in all its departments. I believe if all editors were as earnest in presenting the possibilities of the farm and the many false allurements of the city to their readers there would be many more producers. Wishing unbounded success to The Homestead, I am, very truly, L. H. Bellows.

It will be pleasing, I feel sure, not only to the writers of all such letters, but to all my friends and subscribers, to know that while the present Homestead building is being put into order again and equipped with unexcelled opportunities for good mechanical work, plans are well under way for a new $125,000 Homestead building to be erected before the first snow falls next winter. Already a site has been selected and purchased, a beautiful tract of land, adjacent to the railroad tracks in the rear, while at the same time fronting on the most exclusive and the most sightly residence boulevard in the city. Architects are at work upon plans for the new building which will not only house every department of The Homestead, with its allied printing interests, but also be one of the picturesque and attractive structures of the city. The building is being designed so as to be an ideal publishing plant. But it will be even more than that. It will be the home of The Homestead and of The Homestead makers, with attention paid to their every want and comfort, so that all may work together with the maximum of conveniences and fellowship to produce the maximum of results. When the building is completed and occupied nothing will give me greater pleasure than to greet my subscribers and friends in our new home, the further details and the progress of which I shall confide to them from time to time.

The thankfulness which I feel because it has been permitted me to advance my plans a whole year or more and look forward thus early to our new Homestead home can hardly be expressed. The year which started so inauspiciously, with the destructive fire, bids fair to be the most pleasant, happy and prosperous of the whole third of a century during which agricultural journalism has engrossed my undivided attentions. Twenty years ago this fall we moved into our present home. And now the newer, bigger and better Homestead home will take shape within a few weeks and be ready for occupancy within a few months. I am thankful, indeed, that the outlook for the future is so roseate, but I do not take the credit to myself. It has been made roseate because of the unswerving, inspiring and never-failing loyalty of friends, in number and cheering counsel far beyond my fondest expectations. To all these friends I can only say, "I thank you," and pledge myself to walk with them in the future, as I have always tried in the past, lending a hand when needed, doing what little I can to make farming more of an exact science, farm life more of a complete pleasure and the farmer a still greater factor in the world's progress and prosperity.

Sincerely yours,
JAMES M. PIERCE,
Publisher The Iowa Homestead.

THE FOLLY OF ROOT CUTTING.

It will only be a few short weeks until the cultivators will be taken from cover and put in shape either for a season of use or misuse. In methods of cultivation men are either orthodox or unorthodox, the latter including those who year after year work root havoc in their tillage operations. If some system could be worked out by which every man who expects to ride a corn plow in 1913 could be given an illustrated talk on the character of corn rootlets we believe that it would add millions of dollars to the income of corn-belt farmers this year. Such a lecture would convince men that the surface food of soils is the feeding ground for the most important rootlets of the plant and that to put shovels down into this network can only mean a very decided reduction of the yield. This matter was put in a forceful way at a recent Wisconsin farmers' institute by Mr. L. E. Scott, who among other things said:

The intercultivation of all plants should be shallow, fine, frequent, continuous and, if possible, level. It is well known that up to a limit, rarely reached in a northern latitude, that the warmer the soil the more rapidly nitrates will develop and the faster crops will grow. The most effective way to warm soil is to drain it of surplus moisture, which would naturally cool the soil if allowed to evaporate. But soil may be also warmed by proper tillage. With shallow tillage, the roots grow nearer the surface, where the higher temperatures are, and where bacterial action is most active.

Experiments show that with tillage one and one-half inches deep soil is warmer down to a depth of three feet than with tillage three inches deep. Also that where the surface is left smooth the soil is warmer than where the cultivation is coarse and furrows and ridges have been left. I cannot call to mind a crop but will do better with shallow tillage if that tillage is thorough.

We are sometimes asked if we would not cultivate corn deeply the first time through. When corn is big enough to cultivate, a casual examination will show you that the roots in mellow soil are three times the length of the plant above the ground. A glance at the shank of the cultivator tooth running deeply and you will see the fine and tender roots clinging to it. Prune the roots of a plant and you will retard its growth every time.

Many orchards have been permanently injured by deep plowing or even disking. The same principle holds good with all trees, shrubs and plants.

We have known of many instances where the yield of corn has been cut ten, fifteen and even twenty bushels per acre by slashing into the roots. We believe that it is quite in order to bring the subject up so that it can be pondered over before the time for doing the damage comes around. If there are any of those who enjoy the music of snapping rootlets we desire to remind them that such music is enjoyed at an enormous cost.

THE ROLLER A VALUABLE IMPLEMENT.

According to the views expressed by an Illinois subscriber the real merit of the farm roller is not appreciated by the farmers of the corn belt. In outlining the conditions under which he uses the roller and the crops which in actual experience are known to be benefited by its use, this subscriber says:

Among the many and much-needed tools on the farm I consider the land roller as one of the most important, for this reason: What success will we have in planting and cultivating our farms if the fields are full of clods and unpacked dry soil? I believe very much in the use of the roller, and especially so if the season is a little dry. In a wet season I do not consider its use so valuable, unless one breaks his ground while it is yet too wet, which will leave it in clods. Then the roller must be used if the soil is ever put in a condition to get satisfactory results from the crops.

I found the roller to be a very valuable implement in the cultivation of my cornfields in the season of 1911. If you remember, the late spring and early summer was extremely dry. From the tenth to the fifteenth of May, 1911, I planted forty acres of corn, and owing to the drouth which continued some six or seven weeks, I believe the roller was one of the best implements that could possibly have been used in the cultivation of that corn up to the time the drouth was broken by some light showers. The ground was in fairly good condition at the time of planting. When the young corn was about three inches high I plowed it, two men plowing and one man following right behind them with the roller.

In plowing the first time, even though the surface was dry and dusty, we found plenty of moist soil underneath, which would, of course, be brought to the surface in the form of small, soft, moist clods. If left in this condition they would in a short time dry out and become hard and dusty. But by following the plows closely with the land roller the soft, moist clods were easily and quickly crushed, pulverized and packed closely together, which soon formed a dust mulch and prevented the moisture from escaping from the soil. When the corn was about six inches high, the same process was followed again.

Now, by using the roller in this way I found it a very easy matter to hold plenty of moisture and my corn grew right ahead through the drouth, and I attribute this largely to the use of the land roller.

I cultivate about ten acres of sweet potatoes each season and I find the roller to be of much value in the preparation of the soil. When the soil is in a good state of cultivation I make my potato ridges with a disk cultivator, and then before setting the plants I roll the ridges, which packs them and holds plenty of moisture to cause the plants to live and grow right off. If the weather continues dry I often roll the potatoes after they have been plowed a time or two, and I find it to be a great benefit to them.

Another very important use of the land roller is in the preparation of the wheat field, and at this season of the year it is most usually dry. I advocate the practice of following the breaking plows each day with the roller, as it has a great tendency to pulverize the surface and form a dust mulch, which keeps the moisture from escaping from the soil through the air. And by so doing it is easy to prepare this soil with our harrows. As to the kind of a roller, I prefer a steel land roller to any other kind. They are much more substantial than one made of wood, and are more durable. I prefer them being in three sections, each section being independent of the other. This makes them easy to turn.

In older countries the roller has come into general use, but up to the present time it is the exceptional corn-belt farmer who attaches much importance to the value of the roller as an implement of tillage. It must be conceded as outlined by this subscriber, that the roller gives its best service during dry seasons because ideal cultivation in so far as the conservation of moisture is concerned involves the firming as well as the fining of the surface soil. The roller can generally be put to important use early in the spring on the meadows and winter wheat fields because it presses down the frost-heaved plants enabling them to take hold of the soil more firmly and more quickly. For bringing into a fine condition a surface that is cloddy no implement can be compared with the roller if it is alternated with a good surface stirring device like the common harrow. Its use even during a single season under these conditions will often much more than pay the original cost of the roller in the increase in the crop from a well-prepared seed bed.

THE GRAIN BELT LEADS.

It is notable that notwithstanding the recent agricultural development of the Pacific Northwest and the Southwest and the agricultural awakening in the East (where abandoned farms are being taken over and profitably worked) the office of secretary of agriculture has invariably come to the grain belt. This is official recognition of the fact that the agricultural heart and wealth of the country are to be found in the dozen states of the middle West popularly known as the grain belt.

The first secretary of agriculture came from Missouri, Norman J. Coleman. The second came from Wisconsin, Jeremiah M. Rusk. The third came from Nebraska, Sterling P. Morton. The fourth came from Iowa, James Wilson. The fifth comes from Missouri, with Texas antecedents and training, David F. Houston. President Wilson has followed his immediate predecessors (Presidents Harrison, Cleveland, McKinley, Roosevelt and Taft) in giving the post of honor to a man from the region which has almost one-half the improved acreage, has fully one-half the wealth in farm land and buildings and produces more than one-half of all the corn, wheat, oats, hay and potatoes of the entire United States. For a time it appeared as though President Wilson might shatter precedent and appoint a New Englander (Obadiah Gardner, of Maine), but at the last he returned to the grain belt and to the state which had already had the honor to furnish one occupant of the high office. That the honor is worthily bestowed upon Secretary Houston is testified to by one of the leading republican newspapers of Missouri in this manner:

It can be said of Secretary Houston that, although a citizen of Missouri, he is as much Texan as Missourian. It was the experience he acquired and the ability he displayed as president of the Texas College of Agriculture and Mechanic Arts, conjoined with the administrative efficiency he has shown as chancellor of Washington University, St. Louis, which marked him as a fit man for carrying out the plans of the president for the advancement of scientific agriculture and the widening of the farmer's business opportunities.

Under the continued leadership of the grain belt there is no reason why the department of agriculture should not forge ahead in the future even more than in the past and become still more of a factor in making larger and surer the legitimate profits of the most useful occupation in the world, farming.

Always keep a wooden maul at hand when there is any splitting to be done in the timber. Your ax was made to chop with, and not to beat and batter the poll up by hammering an iron wedge, either in driving it in or loosening it from the wood in splitting.

THE HARROW MUST BE USED MORE.

The average man does not realize the possibilities of increasing the yield of many or all of his crops by using the harrow more frequently. A close study of methods of soil culture employed by those who come to us from foreign lands will very quickly reveal why in most cases they are able to get larger crops than the native American. They seem to understand that the frequent harrowing of the soil brings about the rapid liberation of fertility.

An incident was called to our mind a few years ago where a Swedish farmer raised 8,000 bushels of oats on eighty acres of Iowa land the first year that he tilled American soil. The cornstalk ground used as a seed bed in this case was double disked and harrowed not only once or twice but six times. The owner of this particular farm had never raised more than seventy-five bushels of oats per acre and he accounted for the very large yield of his renter by the fact that he had so frequently harrowed the soil.

The same doctrine applies when it comes to the matter of preparing ground for corn. After the plowing is done the surface soil should be firmed and fined by the free use of the harrow. If it can be plowed early so much the better because that only affords a more ideal opportunity to do the best kind of work in preparing a seed bed. No implement excels the harrow in its effect upon conserving the moisture because it creates an ideal shallow mulch. Between the time of planting corn and the period when the crop begins to show above the ground, the harrow can be used to the greatest possible advantage as a weed destroyer as well as an agent of moisture conservation. When the weeds are young the harrow can always be counted on to do deadly work and those who are most successful in keeping their cornfields free from weeds are the very ones who make the freest use of the harrow early in the season.

A little work with the harrow on the winter wheat fields or even on the clover meadows early in the spring will often result in greatly benefiting these crops. It is an excellent plan to disturb the hard crust that forms when the land becomes settled in the spring and this can be done most effectively by the harrow, as the harrow is not a root pruner. Even though winter wheat is not seeded down and there is therefore no necessity for covering the seed, the harrow might profitably be used. The laceration of a few leaves means very little injury because the roots after all are the chief concern. If they are sound and there is plenty of moisture the plants will soon make sufficiently headway.

FAVORS THE PLAN OF ROTTING MANURE.

An Illinois subscriber, Mr. M. B. Downend, gives his method of handling farmyard manure in the following communication:

A recent issue of your paper contained an article on wasting manure. For years I have made a practice of hauling the manure to the field as fast as it is made. It is put in large piles, fifty or more loads to a pile, and as high as the wagon rack or higher. There is enough in a pile to absorb the rain and hold the liquid so it does not waste. I haul this out where I sow my oats and do not spread it until after the oats are cut. Sow the oats around it and it does not bother either in sowing or cutting them. After the oats are cut the manure is ready to spread and one man can spread from fifteen to twenty-five loads a day. At that time of the year it does not pack the ground. When the oats are growing you can drive out any time and it does not hurt them much.

We keep the manure cleaned up around the barn and feed yards by following the above plan. A flat-bottom hay rack is used for this purpose, as we have found it much easier to load and unload and twice as much can be hauled as in a wagon box or spreader.

In our opinion it is a bad practice to spread manure on the ground when it is frozen, as it holds the frost and makes the ground hard and sour. Another practice that should be avoided is that of driving over the fields in the spring when the ground is soft and packs easily, making it hard and cloddy. Whenever it is dry enough to haul manure it is dry enough to plow.

In some respects the practice of Mr. Downend has much to recommend it, but its good features are, in our opinion, more than offset by undesirable ones. It is true that when manure becomes well rotted a given quantity of it is richer in plant food constituents than fresh manure, but the fact must be kept clearly in mind that in the course of six months manure piled up in the manner here described may lose as much as 50 per cent of its weight through decomposition and in some instances as much as 60 per cent of its nitrogen content. While it is here stated that there is plenty of straw to prevent leaching, yet it is not known how much liquid manure seeps away from beneath the pile carrying with it a considerable amount of soluble phosphoric acid and potash. This being the case we cannot endorse the plan here set forth because our soils not only need the humus material that is so largely lost through the process of decomposition, but they need the nitrogen that disappears in the air from rotting manure as well as the mineral elements that are dissolved by the rains and seep away into the soil.

CO-OPERATION LOWERS LOANS.

Interest in the co-operative farm loan systems of Europe is sometimes lessened by the belief that the subject is a technical one, difficult to understand. The fact of the matter is that the systems abroad, which congress is investigating and about which so much is being written, are so simple as to be easily understood by all. The Raiffeisen banks of Germany are nothing more nor less than groups of farm neighbors who get together, agree to pool their credit resources without limit and so jointly borrow money which the association in turn lends to its members as they need it. We have not seen a more simple or more concise explanation of the workings of this system, which the American farmer is too inclined to believe is complicated, than that given by a writer in a recent number of Hearst's Magazine, as follows:

Each member of the new banking company signs a pledge of his entire resources for the bank's debts when he subscribes for his shares. Under German laws they must have a minimum share capital of ten marks ($2.38) per member. The average for all Germany is nearly twenty marks per member, and that is the amount our Westphalian farmers put in, each an equal share until the ninety-two of them—all the farmers in this particular valley—have contributed $4.76 each to make a total banking capital of $4.38.

They file their articles of incorporation—a simple and inexpensive legal process—and in a few days their charter is issued. Now they are full-fledged bankers, entitled to deal in credit just like the bankers in the cities—with these exceptions: They may lend only to their own members, who must be their own neighbors, and they may lend only for productive purposes, which must be stated in the application for each loan.

They elect officers, all from their own membership, and all without salaries except the cashier. For that office they pick one whose farm is near the center of the district, for there is no banking house to be built or rented—a back room in the cashier's house is the banking office, and his salary of ten or twelve marks a month covers the rent.

Now the applications for loans come in—many times the amount of the new bank's capital. Where is the money to come from? Out of hiding, some of it, for as soon as the new bank—their own bank—is open for business, the thriftier members uncover their little hoards and deposit them to draw interest and be loaned to their neighbors. But even these deposits do not provide funds for all the would-be borrowers. Very well, the new Raiffeisen bank gets the rest of the money it needs in the open money market; right at the bank, the best and the biggest bank in the nearest town or in any town in Germany. Is there a bank or a banker anywhere in the world who wouldn't lend, to the limit of possible demands, on the security of a note backed by the combined guarantee of the farmers of an entire agricultural community, every one of them pledging all his individual resources for the debts of the group?

Co-operation is the foundation on which the Raiffeisen banks are based. President Wilson proposes a thorough investigation to see if the system can be practiced as successfully here as in Europe. In Germany the Raiffeisen banks average only about $440 of paid-up capital and ninety-two members each, but the 15,517 of them existing in 1910 had over $500,000,000 of working capital with which they made $1,500,000,000 of loans, the average rate of interest being 4.4 per cent as against 8.5 per cent which the average American farmer pays on his loans. Once it is understood that the system is simple much of the objection heretofore urged against the adoption of the plan in America will disappear.

SUPPLEMENTING THE HAY CROP.

More than the usual number of inquiries have been received during the last few weeks relating to the probable shortage of hay this summer. In every case information is asked regarding the best means of substituting annual crops for the biennials and perennials like red clover and timothy. An Illinois subscriber, Mr. Roy Coleman, gives some practical advice on this subject when he says:

Good, well-cured oat hay makes an excellent feed for horses as well as for most all other kinds of live stock. Oats are often fed unthreshed and are usually relished by horses, though when utilized in this way they should be cut when rather green and cured like hay. This plan is practiced to quite an extent in some localities. The oats are sowed in the spring and later when the crop is well advanced they are cut and cured the same as timothy or any other hay crop is handled. When the crop is cut before it is mature enough for threshing and is well cured it is bright and very palatable. However, naturally, the greener the condition of the oats when cut the poorer will be the crop in digestible food.

Heavy, succulent oats may be cut in the morning after the dew is off and then kept stirred to let in the air. With warm, drying weather the green oats may be cocked up the next day after cutting and if opened up and exposed the next day to a bright, clear sky then it may possibly be hauled in that afternoon. However, the essential thing is to get the crop in free from excessive moisture so that it will not mildew in the mow. The time required to do this will of course depend on the condition of the oats. If very heavy more time will be required, but if rather light they will cure quickly.

It should be remembered that the horse digests his food quickly and whatever ration is fed should be prepared with the view to supply the nutrition the horse needs. Horses will work better and keep in better condition on a smaller amount of ground grain of the proper kind and an abundance of good roughage, such as well-cured oat hay, than they will on a ration of whole corn, no matter how much of it is fed. Oat hay is not only good for work horses, but it is just as valuable for young growing animals and they should be supplied with same if the best results are derived from the feeding.

The plan of harvesting here suggested will result in a very good quality of oat hay, but we desire to call attention to the fact that it is entirely practicable under certain conditions to use the binder. In this case the crop should be allowed to stand until it is just beginning to color. It should then be bound into comparatively small sheaths and the bands should not be drawn too tight. If shocked the same day the crop will in nearly every instance cure out excellently though in sheaf form. If the sheaves are made very large and bound tightly there is always a little danger of them molding at the heart and for that reason it is very important that our suggestions be carried out. It is true that it may take a week or ten days or even two weeks to cure out the crop in this way, but it is so much more easily handled when bound not only in harvesting the crop, but in feeding it that we much prefer this plan to that of cutting it with the mower and curing it out like any other crop.

SPRING CARE OF THE FARM ANIMALS.

Filth is at the bottom of about all the sickness our animals are subject to. At this season it is important that all pens and houses be thoroughly cleaned and the pure air and sunshine which have been more or less excluded over winter allowed to come in. Sunshine is a great disinfectant and sure death to disease germs. Droppings should be regularly removed from the poultry pens and the hog quarters thoroughly cleaned and every bit of litter and all other material hauled away to the fields. Whitewashing hog quarters and sprinkling lime on their yards help much in keeping things pure and preventing disease.

Mites will multiply fast as the weather warms up and it is an act of wisdom to begin the fight in time. This is especially true of poultry, for after the hens once become broody it is very hard to get rid of lice. Plan to have the chicks hatched as early as the equipment will allow them to be properly cared for. For market the earlier the chicks are ready the better the price and it is the early hatched pullet that will produce results at the egg basket next winter.

Sheep can be allowed on the spring pasture earlier than any other animals, but they should have access to their shed the same as usual. Many spring days are very cold and it is not well for the lambs to be exposed. More lambs die from such exposure than from any other cause.

After the horse is back to full work and feed it is important that only a half ration be given each time it must lay off work for a day. If on Saturday night a warm mash of bran is given and half rations Sunday the horse will be in much better state to do its work on Monday. Heavy feeding on Sunday when the horse is idle is the cause of most of the stiffness and illness to which so many horses are subject on Monday.

UTILITY OF THE SPREADER.

In times past it was the practice of most farmers to haul out the manure supply only once a year and we are sorry to say some of our farmers are still practicing this wasteful method. The manure was usually hauled out in the spring, shortly before time to begin plowing the ground for corn. As a result the manure was left exposed to the weather just outside the barn door for at least six months. It has been repeatedly shown by chemical analysis that manure thus treated will decrease in value 40 to 60 per cent.

In an experiment conducted at the New York Experiment Station, 4,444 pounds of ordinary manure were taken from a horse stable, worth $2.74 per ton for the plant food it contained, and was exposed in a heap out of doors from April to September. This manure decreased in weight 1,770 pounds and the remaining 2,674 pounds had decreased in value forty cents on the ton. Just a little figuring from this experiment will show that in five months' time, less than two and one-fourth tons of horse manure decreased in plant food value from $5.48 to $2.13.

There are many farmers today wasting enough manure value at this rate to pay for a good manure spreader in one year. We think that it behooves every farmer to acquaint himself with the various experiments in order that he may be better able to hold such losses in check, for this is where much of the profits go.

In speaking of the utility of the spreader, Lester C. Davis, of Indiana, says: "I have had some years' experience with this machine and I think it is the most useful, labor-saving and profitable implement on the farm, and one that pays for itself in the shortest space of time, by increasing the value of the manure. In applying manure with a spreader, it is put on the ground uniformly, thus covering more surface and all parts of the field are equally benefited. But if there is any part of the field that requires more or less, the manure can be put on as thick or thin as desired, and this plan of spreading is certainly far superior to the method of spreading by hand when the manure is unloaded in lumps."

The great value of the spreader lies in its ability to tear apart the manure and distribute it in a uniform blanket of small particles over the surface. In this way every atom of the manure comes in direct contact with the soil and is absorbed before it has time to leach or wash away. A load will cover two or three times as much ground when machine spread as it will when hand spread, and it makes a better showing in the wheat, oat, corn and potato bins. The six loads spread by machine often give as good results as eighteen loads forked out in lumps and bunches. It is not claimed that the spreader adds to the fertilizing value of the manure, but rather that the spreader makes available a much greater per cent of the fertilizing value.

From a labor-saving standpoint the spreader makes many dollars annually where labor is bought. The machine relieves the farmer of much of the hard and disagreeable work connected with handling manure. Of course, it will not load itself, but it will unload itself in a short time, while the driver sits leisurely on the seat, and during the period he has a chance to regain his strength.

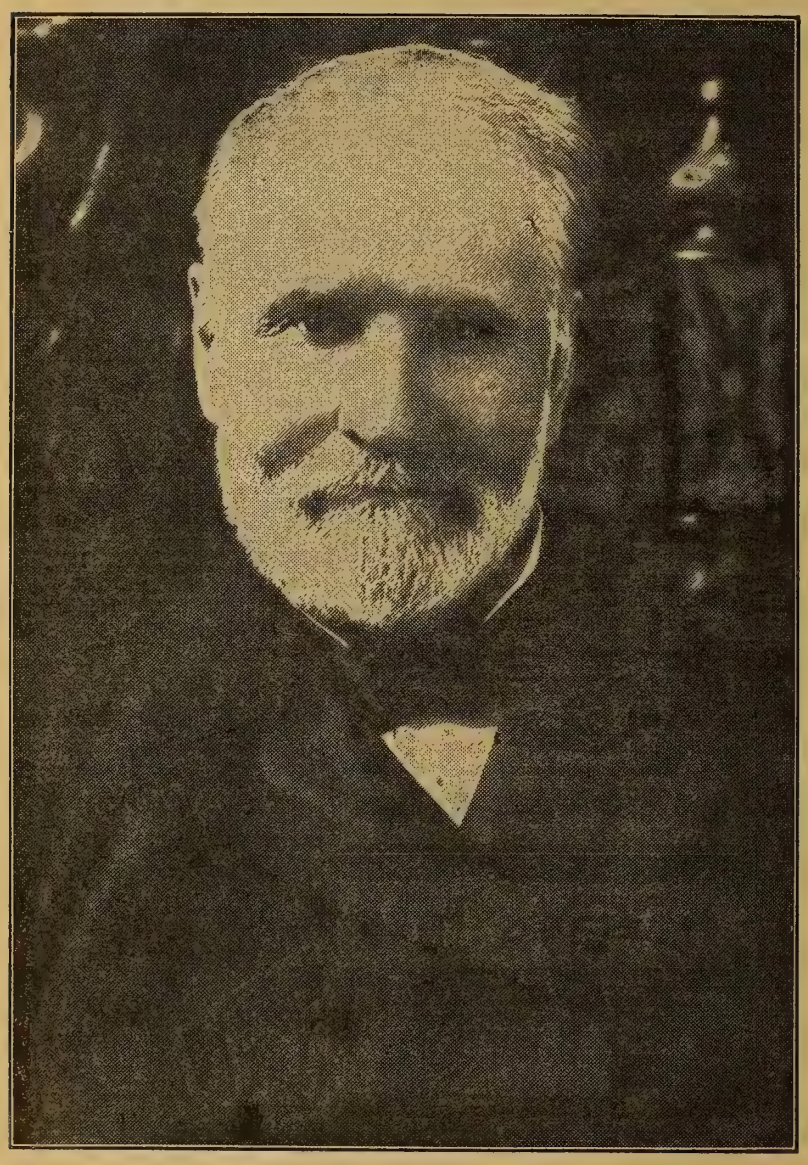
The Home-coming of Secretary Wilson.

Breathes there the man, with soul so dead,
Who never to himself hath said,
This is my own, my native land!
Whose heart hath ne'er within him burned,
As home his footsteps he hath turned.

SIXTEEN years ago the director of the Iowa State Experiment Station was summoned to Washington to become secretary of agriculture in the cabinet of President McKinley. Four years passed and he was reappointed to his high post by President Roosevelt. Another four years passed and he was reappointed by President Taft. Last week this man who had held a cabinet position longer than any other American, who had seen the yearly farm production more than double during his incumbency of office and who had seen his department develop tion this year of almost $25,000,000. There are now 52,000 requests every week for department publications, whereas there were only 500 in 1897. In sixteen years 250,000,000 copies have been distributed. In soil investigation an area of 623,000 square miles, equal to that of Germany, France, Great Britain, Ireland and Italy, has been covered. All this progress, making toward the greater and surer profit of the farmer, is splendidly summed up by Secretary Wilson in his last annual report:

The record of sixteen years has been written. It begins with a yearly farm production of $4,000,000,000 and ends with $9,532,000,000. Sixteen years ago the farmer was a joke of the caricaturist. Now he is like the stone that was rejected by the builder and has become the head stone of the corner. The tillers of the soil were burdened with debts, but prosperity followed and grew with



HON. JAMES WILSON.

into the greatest scientific organization in the world returned home, registering modestly as "James Wilson, Tama county, Iowa." The keynote of the greeting given him by 3,000 friends and associates at the Iowa State College of Agriculture could not have been sounded better than by the lines of Scott printed above and quoted by Secretary Wilson in his response to the many eulogies of his work uttered by the prominent men of the state. The nation had been his field, but in the end he returned home and the "home folks" turned out to do him honor.

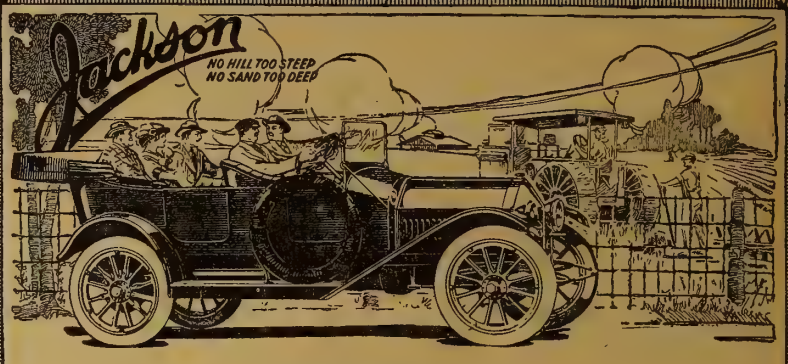
Over all and through all of the exercises which marked the home-coming of Secretary Wilson at Ames last week there sounded the note not only of praise and affection for the worker, but amazement at the work which has been accomplished in sixteen years. From 2,444 employes in 1897 and an appropriation of $3,272,902 the agricultural department has increased during Secretary Wilson's tenure to 13,823 employes, with an appropriaunexampled speed. Beginnings have been made in a production per acre increasing faster than the natural increase of population. There has been an uplift of agriculture and of country life.

In the last sixteen years the farmer has increased steadily the wealth production year by year, with the exception of 1911. In the sixteen years the farmers' wealth production increased 141 per cent.

To have headed the department representing the government's activities and interests in this marvelous development for sixteen successive years is an honor indeed, particularly in view of the fact that no cabinet member, prior to Secretary Wilson, had ever served more than thirteen consecutive years. To have established such a record and then to return home and receive such a welcome as was given Secretary Wilson at Ames last week must have been a pleasure commensurate with the service and labor. Secretary Wilson was greeted by the students of the agricultural college, the faculty and trustees, scores of former associates and hundreds of farmer friends and well wishers. He was lauded by a notable list of speakers, including Gov. George W. Clarke, Pres. R. A. Pearson, Dean C. F. Curtiss, Hon. James H. Trewin, and Sen. A. L. Ames. The occasion was made not only a home-coming for a national figure, but a jubilee for agricultural prosperity and the prominent part Iowa has been permitted to play therein. The day was a memorable one, never to be forgotten by those who were present. After sixteen years of cabinet tenure, Secretary Wilson returns to private life, turning his office over into new hands, settling down once more among the "home folks" whom he left to serve three presidents and treble the utility and efficiency of a department which is one of the big factors in the agricultural prosperity of today.

Wisconsin's unsurpassed opportunities for stock raising are not only attracting the attention of those who desire to settle upon a clearing, but also of many business men in the cities of the middle West, who have become interested in stock farming. Nelson Morris, Jr., one of the most successful of Chicago packers, has lately purchased 200 acres in Green Lake county, which he expects to develop into a high-class stock farm. He has already hired as the manager of the farm and the herd which he will maintain upon it, Henry Cunningham, a son of Thomas Cunningham, the historic breeder of Galloways, who lived near Castle Douglas, Scotland, and who perhaps did more than any one man to develop this great breed of beef animals.

There is a difference in the keeping qualities of apples, but a great deal depends on the place where they are kept. The cellar is usually too damp and warm. A dry room is better, even if the temperature sometimes reaches the freezing point.



"Majestic" (illustrated)—$1975
45 H. P. four-cylinder touring car, completely equipped and fitted with electric starter and lights.

"Olympic" —$1500
35 H. P. four-cylinder touring car, completely equipped. Electric starter and lights are optional, at an extra cost of $225.

"Sultanic"—$2650
55 H. P. six-cylinder touring car, seven-passenger, completely equipped and fitted with electric starter and lights. Five-passenger, $2500.

Not Comfort or Sturdiness alone, but the most of both

Soundness and strength you must have in your car, if it is to prove a real investment.

Comfort you must have, if the family is to get the greatest possible pleasure out of the car.

We believe the Jackson offers the best combination of both to be found among cars of similar type.

You have long known the Jackson to be a thoroughly comfortable car; and you are doubtless acquainted with its reputation for service in country use.

It is because of its ability to stand up in such use that the Jackson has won a favored place among farmers.

In many instances, Jackson cars have seen three, four and even five years of service on the farm and over country roads.

And it is on such roads that its comfort features are most appreciated.

Between you and the ruts are not only seat cushions ten inches thick but four elliptic springs—and you know how easily they ride.

With long wheelbases and large wheels, the easy riding is made more pronounced; and the generous room inside the car is a feature not to be overlooked.

On your own judgment will depend pretty largely your satisfaction with the way your car rides and runs.

So you should not neglect to post yourself.

Do this in the case of the Jackson by writing for the catalog and the name of the dealer who can give you a demonstration.

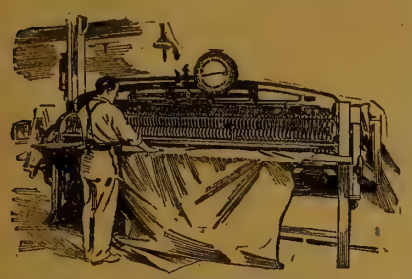
Studebaker

How Studebaker Automobiles Are Made

A Heart-to-Heart Story. No. 4

OUR last story gives us the running part of the car complete. The running part of the car without the body is called the chassis. Before we go on to the Studebaker methods of body manufacture we wish to call your attention to a few points regarding the Studebaker chassis.

First—the steel frame of the car. The frame is the backbone. It carries and forms a protection, so to speak, for the vital organs—the motor, transmission, propeller shafts, rear axle, etc. The steel pieces which make up the frame are formed in what is called channel section. They are cold rolled from specially prepared tough steel which, like a bridge, is built with twice the strength necessary to carry even the heaviest load that will ever be placed upon it. The strip of steel is cut exactly the right length and then



Machine for measuring leather to get every inch of its good surface.

placed in a gigantic press, which bends the two edges at right angles with the face, this is what is meant by "channel section." It is bent this way to give it strength to meet strains in every direction. The long side pieces are held together by cross pieces, or cross members as they are called, which are riveted and braced (gussetted) to the side members. The rivets are heated almost to the melting point before they are put in the holes. When the automatic hammers strike them, they expand to fill the holes exactly and, at the same time, they are riveted down against the steel side pieces forming a joint as strong and as secure as a weld. A Studebaker frame will not work loose in years of the hardest service. The placing of these cross members in the frame has been carefully studied and they are located at exactly the points where the greatest strains come.

In speaking about the chassis, again we would like to mention the great advantage of owning a car which is manufactured and not assembled. The Studebaker car is manufactured. The motor, the rear axle and transmission and every part are made in our own factories in direct relation and harmony with each other. In an assembled car, however, the motor is purchased from one manufacturer, the rear axle from another, the transmission from a third, and so on. This means that the entire car is no better than the weakest part. This means, also, that these parts are brought together in the chassis, assembled and compelled to fit each other as best they can. In the Studebaker factories every part of a Studebaker car is made for every other part. This is why a Studebaker car will run so smoothly and so silently; none of its power is wasted in the attempt to adapt one part of the car to another part. There is a straight line drive between the motor and the rear axle and every part is perfectly adjusted and perfectly fitted to harmonize with every other part. This is what gives the Studebaker car the speed and the power with minimum consumption of gasoline. Every part is of the highest quality; there are no weak parts to spoil all the good parts.

After the chassis is completely built and tested by miles of actual hard driving over a test course of country roads, it is steam-cleaned, painted and made ready for the body.

The body of the automobile is a very important part, and especially so from a sales standpoint. The body is the thing that you see, it is the only thing, unfortunately, that a great many people see in buying a car. A poorly made body can be painted, varnished and upholstered to look exactly as good as the best made body, but a season's wear will tell the tale. You will find joints opening, paint checking from the vibration and strain of the metal work, leather pulling apart and many other evidences of poor body construction work.

Studebaker bodies are Studebaker made from the rough frame work to the twenty-fourth coat of paint which goes to finish them. First a Studebaker body is made of a special grade of sheet steel, which will give the least expansion and contraction in changes of temperature, and which has a surface especially prepared to take a glass smooth final finish. This sheet steel is placed upon a framework of hardwood, braced, reinforced and mortised together under specifications which it has taken years to develop. The steel brace work in the Studebaker body is drop forged. In most bodies you will find that wrought iron and malleable iron are used instead of steel. The framework of the body is put together by men who have spent years in framing Studebaker vehicle bodies.

The Studebaker Corporation makes its own auxiliary seats, it is one of the few automobile manufacturers that makes this part of its car. The method of fastening them to the side of the body is distinctly "Studebaker," and the fastening is drop forged steel engaging with two body braces, which make it impossible for a Studebaker auxiliary seat to work loose.

It will require a herd of 150,000 cattle to furnish hides to supply the Studebaker factory with upholstering in the season of 1913. These hides must come from full size cattle and they must be of select quality. Only the outside layer of the hide next to the hair is used. This means that every available inch of the hide is used and it takes three hides for each car.

There is probably no furniture manufacturing concern in the world where more skilled workmen are required to cover the finest furniture than those required to trim automobile bodies in the Studebaker factories. If you visited the Studebaker factory you would be surprised to see the amount of hand work that is used in upholstering a Studebaker car. Even the cushions are made by hand. The leather, of course, is stitched by a machine, where machine stitching is better for this purpose than hand stitching, but the cushion is stuffed with hair, tufted and placed upon the springs entirely by expert hand work. In looking at the next automobile, remember this point: it is practically no more expensive to provide 15-inch upholstery than it is to provide 10-inch upholstery. It is usually a question of the length of coil steel springs. The car that seems the springiest when you sit in it first may be the first one to cave in—like the old lounge at home—when you give it a little hard usage on the road. Studebaker upholstery not only depends upon coil springs for its depth, but also upon good quality of hair and plenty of it.

The springs that are used in the cushions are reinforced in every direction and we guarantee that Studebaker

Studebaker Automobile Bodies are upholstered by hand.

seats will not cave in at any time. They will not bulge at the edges even after many seasons of hard wear. Our secret of making a cushion this way is simply the secret of good hand work and an ample supply of good material and plenty of painstaking thought in design. The piece of upholstering in the back of a Studebaker car is about 15 ft. long—it is made with the same painstaking care as the cushion. It is subject to the same guarantee. It is made of the same quality of leather. It is put on the car by the same skilled hand work. When it is completed it is as good as the highest grade upholstering on parlor furniture.

Running around the top edge of the body, there is a molding of real walnut—not imitation walnut stained to resemble the real thing, but real walnut. It is fastened on the body frame work with screws set in washers. The holes are drilled and the screws put in by hand and with the most careful workmanship.

Probably one of the most interesting operations in body finish is the painting operation. The body of the Studebaker car is painted, rubbed and varnished twenty-four times before it is finished. There are six coats of filler put on the body and rubbed before the first coat of color goes on. This rubbing process is done by hand—every inch of it. It is rubbed with a piece of pumice stone of special quality which is as smooth as a razor hone. These various rubbing processes work the filler into the metal until the surface becomes as smooth as glass. Then coat after coat of color paint is used and each coat rubbed with the same care and until it shows the same glass-like finish. It is particularly interesting to see the skilled workers place the varnish over the color work. The richness of the color stands out under the very first coat of varnish like magic. The succeeding coats of varnish give depth and added richness to the color and also durability to the finish. These are the marks of its quality and an indication of the skill with which it is applied. It has the quality which will make it

Six coats of paint foundation are rubbed on the Studebaker Body before the first coat of color is put on.

stand for years without checking or without tarnishing, provided proper care is exercised in washing the car.

It takes several weeks to build a body for a Studebaker car, but when the body is finished it represents one of the highest specimens of upholstering, painting and varnishing known to the art of body building.

The designing of an automobile body is a very important part of automobile manufacture. Skilled engineers and designers work for months to plan the new model body on paper before the first step in pattern work begins. There are dozens of measurements to be taken into account, and every inch of room must be planned to give the greatest amount of convenience and comfort to the users of the car, and at the same time the lines and shape of the body must be beautiful, symmetrical and graceful in every particular. The next time you look at a Studebaker car, compare its wide doors, the ease with which you may enter or leave the tonneau or the driver's seat, the perfect fit of the seat cushions and back, the ample room for you to lounge and stretch out—compare these features with those provided by manufacturers who ask twice as much for their cars as we do.

Perfection is made up of small details. Notice, in the Studebaker car, that the carpet is fastened to the floor with a ball and socket fastener. It will not scuff up under your feet. Notice the care with which the small fittings are put on. The exactness and perfection in Studebaker workmanship is especially evident when you compare it with that used by the manufacturers of other cars. The nickel work on a Studebaker car will not wear off and show the brass beneath. Notice how well the doors on the Studebaker cars fit. Notice the mortise work of the locks and fasteners. These are the little things which you can see and which indicate the careful workmanship in building Studebaker cars.

The Studebaker Corporation makes its own tops complete. We do not buy a top in the open market and adapt it to our bodies, but we design and manufacture the top in perfect harmony with the body. We buy 600,000 yards of cloth to keep the owners of Studebaker cars dry in wet weather and shaded from the sun in tropical climates. This

The sewing room of the Studebaker Top Factory. The tops of Studebaker cars are cut and made as carefully as the finest garments.

is another place where buying in enormous quantities gives us splendid market opportunities. Not only can we select the highest grade material, but we can buy it at a price which other manufacturers pay for inferior material.

Here is an important thing for you to consider in buying an automobile. If you select a car manufactured by a manufacturer who produces cars in large quantities you can be sure that every part of it is built by skilled workmen. It is only under the conditions of quantity manufacture that true specialization can be obtained. There is enough work in our factory to keep certain men continually busy doing certain things. This is particularly true in our top department. For instance, one set of men do nothing else but place the top sheets of mohair on the frame work of the top. The precision with which they do their work is a precision learned from years of specialized effort in the same direction. We might take every part of our top, and in fact every part of our car, and go through it the same way. The Studebaker car is one of the finest examples in the world of the quality produced by highly specialized skilled labor. The cutting of the cloth, used in the tops, is done by experts as skilled in their work as those who cut the most expensive clothing—they have the same kind of patterns to go by and the same high standard of accuracy is required. All work is subjected to the most rigid inspection. This is true in every part of body manufacture. Every operation has its inspection.

It is difficult to put on paper the tremendous power and capacity of such an organization as Studebaker, which seems so simple and which yet embodies the enthusiasm and energy of so many thousands of skilled men. Yet this power is real, it is vital, and we hope you are coming to feel it. Our next and last story will appear in the April 3d issu. Look for it. In the Studebaker Proof Book we tell more than we have been able to tell here about an automobile and explain things everyone ought to know on this important subject. Tear off the coupon below and send it to us. We will send you the Proof Book immediately.

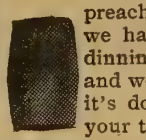
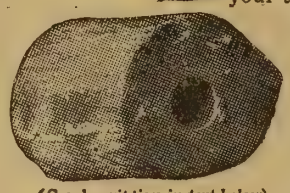
CYPRESS posts "STAY PUT." LUMBER ECONOMY SERIES, No.3



Here we are again, Mr. Farmer, with another preachment on Cypress, "The Wood Eternal." If we had less faith in the stuff we should not keep dinning it at you; but we know whereof we speak, and would have you know. It is to your advantage—it's dollars to you—to get the Cypress microbe into your thinking system and the Cypress fence post into your business system. If you will but give this lumber a try-out, you're certain to become a buyer, steady, of Cypress and that's what we want. We are not working for to-day alone; there will be Cypress a-plenty, after you and we are dead and the Cypress you put in will be on the job long years after our grandchildren are dead—so don't get the idea that we are trying to "unload" something on you in a hurry.



(See description in text below)

FENCE POSTS DON'T ROT?—WHAT!

That is, Cypress fence posts have other things to do than to rot—and do the other things first—contrary to the habits of most woods. Some posts seem born to decay, but Cypress fence posts prefer to stand where set, hold a nail or wire staple, and "stay put" for all time. Witness the "endurance test" at New Orleans, La. About the year 1800 WATER MAINS were laid in that city made of Cypress logs with 5-inch holes bored lengthwise. These were coupled with short heavy iron tubes. A few years ago these logs were replaced by a more modern and capacious system, when, lo, the Cypress logs were found sound and hearty, after a century of service in the damp earth. The iron connections were rusted out beyond redemption. The same kind of Cypress for every building or "odd job" need you have around the ranch, may be bought from your nearest lumber yard. If not write us, and we'll find you a live dealer.

BOARD FENCE STYLISH

The old board fence always was the handsomest and best fence, and it is coming back into style. Woven wire is all right, but it doesn't "pretty-up" the place any. No boards last like Cypress, and you may get them free from knot holes. They are stiff, strong and enduring. Enduring and then some.

Acquainted With the Cypress Pocket Library Yet?

If you're interested in SHINGLES ask us for Vol. 7; if in SIDING send for Vol. 9. Vol. 1 tells you much about the wood—in fact it's the U. S. Govt. Report in full. An *Investment Guide* worth while.

Going To Build a Barn?

In
Cement Foundations and Cement Floors
Use
ROSS Iron Studding SOCKETS
The "100 year" Post Supports

Simply Tap Sockets down in Soft Cement No Sills to Rot! No Toenailing to Rust!

Your studding stands on surface of Cement in Iron Sockets. *Openings* allow moisture to escape. Your Studding can't rot! You can drive large wrought nails through the HOLES right into studding, to lock your building securely to Cement.

Last Forever

ROSS Post Supports are PERMANENT. Think what it means to have a durable ROSS Socket securely fastening every upright post to cement foundation in your building. A perfect unity of iron and cement. No "rot-away sills." No "rust-out toenailing."

Thousands used in Barns, Corncribs, Granaries, Hoghouses, Coalhouses, Sheds, Garages—any building with a Cement Floor or Cement Foundation. Sizes to fit *any* upright.

Write Today

for FREE Booklet. It tells you "HOW to BUILD Cement Foundations and Floors" with upright supports that are *everlasting.* Write today!

FARM FURROWS
TURNED BY A PRACTICAL FARMER

I have just received a bulletin concerning farmers institutes for the year 1911, issued by the United States Department of Agriculture. Sometimes the department does things up with a rush.

Leaky feed troughs run the feed bill up.

No one is counting out the bundles of rough feed to their stock, as they did last spring. There is a plenty and some to spare. Coarse fodder, that will not keep well in stack, makes a fine filling for ditches.

A few flower beds and a lawn do wonders towards making the farm home attractive. It adds nothing to the producing power of the farm, of course, but it does add much to the actual value of the farm, in case the owner should happen to place it upon the market.

Sharpen up your pen knife, and thus disprove the assertion that a farmer never has a sharp knife.

I take no stock in all the talk about such and such not being worth what it costs because it adds nothing to the producing power of the farm. The man who will not progress because such progress "will not make the farm produce any more" is considerable of a stand-pat and stick-in-the-mud. I have even heard men argue against better roads, because they could not see that better roads would add to the stuff produced on their farm, just as if hogs, cattle, grain and the almighty dollar was everything.

I have been living twice as far from town the past three weeks, because the roads have been next to impassable with mud. A man who can be satisfied with mud roads is certainly a stand-pat of the most pronounced type.

Will you arm the kicky horse with another ugly and dangerous weapon by putting shoes on him?

The postoffice department is going to add a c. o. d. feature to the parcel post business after July 1st. Little by little, and in the sweet bye and bye we may have a real parcel post system, such as other countries have enjoyed for years.

Why is it that we always are complaining of a thing after it is done and can't be helped?

Where a man has the horsepower, I think he is perfectly wise to hook a harrow cart on behind his harrow, and ride on it. At any rate, it doesn't pay to use a small harrow where there are horses to pull a large one. If a man trudges along behind, he feels better about it when cutting a wide swath.

Employ the balanced ration, and it will balance your bank account in your favor.

I never did believe in throwing expensive grass seed away by using an unusual amount of it to the acre. If the seed is good and the seed bed is likewise, less instead of more than the usual seeding will produce a stand. If it does not, twice more seed would not be apt to, as season or seed bed would be at fault, and more seed cannot overcome these.

Dig out that seed corn grader and germination box.

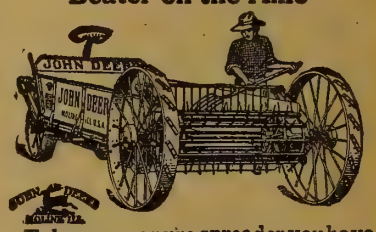
With the mud six to ten inches deep where they were, I saw, yesterday, a herd of cows turned out in a stalk field. The cows were getting plenty of exercise all right, and not much feed, while the land was getting a tramping it will scarcely get over this season. Under no circumstances do I believe in late spring pasturing of stalk fields. Cattle tramp land enough when it is dry, say nothing of when it is wet.

There will be a great deal of corn in the shock, unhusked, when the land will be wanted for spring crops. The winter has been ideal for shredding or threshing shocked corn, but far from it to husk by hand, as the fodder has been too dry until well on towards the first of March. It is considerable of a nuisance to have to stop spring work to clear a field of fodder, but last spring many of us would have been highly pleased to have had the fodder to move.

It is a good plan to keep the cattle in the yard when the fields are muddy. The feed they find is of very little value and will be over balanced by the damage they do to fields and meadows by tracking over them while they are soft.

John Deere Spreader

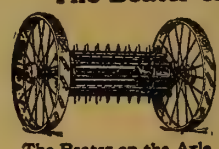
The Spreader with the Beater on the Axle



Take any manure spreader you have ever seen, remove all the clutches and chains, all the countershafts and stub axles, do away with all adjustments and mount the beater on the rear axle.

Rebuild the spreader so that the top of the box is only as high as your hips. Make it stronger. Remove some two hundred trouble-giving parts and throw them away. You will have some sort of an idea of what the John Deere Spreader, the Spreader with the Beater on the Axle, is like.

The Beater on the Axle



The Beater on the Axle

The beater and all its driving parts are mounted on the rear axle. This construction is patented. You cannot get it on any other spreader made.

Power to drive the beater is taken from the rear axle through a planetary transmission (like that on automobiles). It is positive, runs in oil, and does not get out of order.

Few Working Parts

The John Deere Spreader is so simple that there are no adjustments. It has some two hundred less parts than the simplest spreader heretofore made.

Out of Gear

There are no clutches to throw it into gear. The lever at the driver's right is moved back until the finger, or dog, engages a large stop at the rear of the machine. All the chains and adjustments have been done away with.

Only "Hip-High"

Easy to Load

Because the beater is mounted on the rear axle, it is only "hip-high" to the top of the box. Each forkful of manure is put just where it is needed. You can always see into the spreader.

Roller bearings, few working parts, the center of the load comparatively near the horses, and the weight distributed over four wheels, make the John Deere Spreader light draft.

Spreader Book Free—*Tells about manure, when and how to use it, how to store it, and a description of the John Deere Spreader. Ask for this book as Package No. Y.27*

John Deere Plow Co.
Moline, Illinois

CURRENT EVENTS

DR. FRIEDERICH FRIEDMANN, of Berlin, the young German physician who claims to have discovered a bacilli which will check and cure tuberculosis, injected his serum into a score of patients in New York last week. Part of the inoculation was under the observance of United States army surgeons, Dr. Friedmann proposing to turn his cure over to the United States government once he has proved its efficiency. Forty-eight hours after the serum was administered officials of the hospital, who had been skeptical, reported that the inoculated patients were showing rapid improvement, thus giving credence to Dr. Friedmann's claims. Owing to the opposition of New York physicians Dr. Friedmann had some difficulty in securing the opportunity to make his experiments. Medical journals question the efficiency of his serum, contending that undue publicity has been given to it and to his discovery by the daily papers. Dr. Friedmann was greeted upon his arrival in this country by hundreds of tuberculosis victims whose hopes have been aroused to a high pitch by the news of his wonderful discovery. It is expected that within the next few weeks it will develop positively whether Dr. Friedmann deserves to rank with the great scientists, who in recent years have done much to alleviate the conditions of mankind, or whether he has made undue claims for his discovery. Tuberculosis is one of the most deadly diseases, demanding a heavy toll of human life, and should Dr. Friedmann's serum prove to be what he claims for it he will be a benefactor to mankind ranking with the greatest.

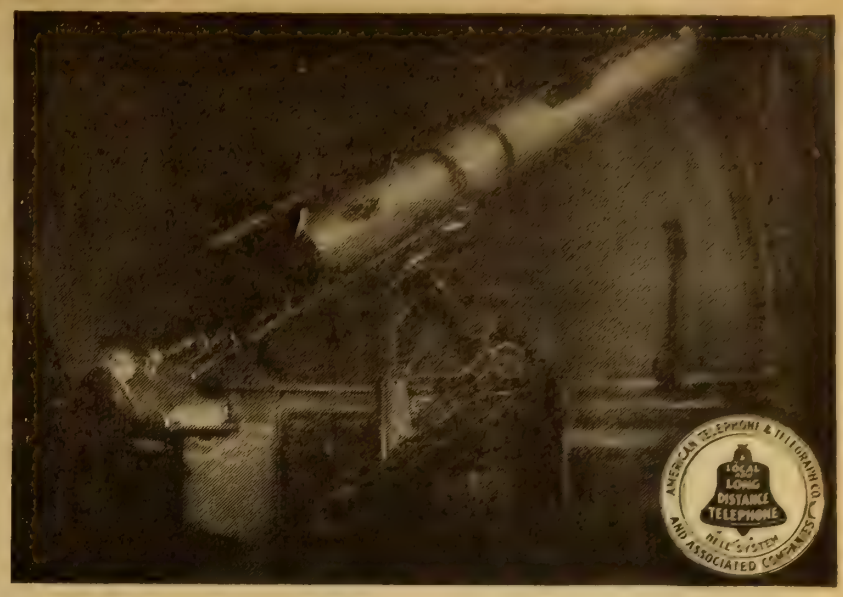
WHEN congress convenes in special session, the first week in April, a working plan will have been decided upon. President Wilson is holding frequent conferences with prominent members of both houses and it is expected that the work of revising the tariff downward will go ahead rapidly, the ways and means committee of the last house having already made investigations upon which the forthcoming bills will be based. It has been announced that President Wilson will take a hand in shaping the bills, letting his views be known before the measures are introduced, instead of waiting until they are presented to him for approval or veto. This will simplify and expedite matters, as the presidential veto may undo the hard work of many months of congress. President Wilson believes that he is personally responsible to the people for the fulfilment of party pledges and he proposes to work with congressmen to insure as early a fulfilment of these pledges as possible. This was the policy he pursued while governor of New Jersey and he is hopeful of being as successful in national affairs as he was in state. The interim between inauguration and the coming together of congress is being occupied largely in making appointments to important diplomatic positions. The president issued a statement the day following his inauguration that he would not see any office seekers except those for whom he sent, leaving the sifting to be done by the heads of the various departments. This is giving him the time necessary to attend to the big matters of policy and to acquaint himself with the actual workings of the government of which he is now the head and for this reason is a sensible and praiseworthy innovation.

THE fall of Adrianople, the Turkish stronghold, is expected any moment. The commander has made a stubborn resistance, but his ammunition and food supplies are at last practically exhausted, so that the surrender of the fortress cannot much longer be delayed. It will be recalled that Adrianople was the stumbling block in the way of the recent peace negotiations, the sultan absolutely refusing to cede the fortress to the allies because of the location in Adrianople of some important mosques, considered as holy property. Had it not been for the severe blizzards which have prevailed throughout the Balkan states since war was resumed the fortress must have fallen before this, but the severe storms caused a delay in the attack and entailed much suffering on the part of the troops. The Greeks have several notable victories to their credit recently, but the Bulgarians have not made the headway that was expected when war was resumed. Should Adrianople fall the allies will then turn their undivided attention to the fortifications around Constantinople and will not be satisfied until the crescent has been completely driven out of Europe by the cross.

THE Illinois legislature (which is investigating the conditions of women within the state, particularly in relation to the so-called "white slave" traffic) has had filed with it a report by a special investigating committee claiming that 50,000 women in Chicago alone are receiving a salary of $5 a week or less. The investigators declare that the low wages are responsible in great measure for the immorality on which many of the girls and women are forced to depend for a living. The report completely exonerates the fallen women, declaring that "no woman is bad at heart, environment is responsible for a majority of crime. They go wrong because they have to live." As a result of the report a large number of the big employers of Chicago have testified before the committee, telling of conditions in their stores. Whether the legislature, in the short time at its disposal, will get to the root of the matter or not is an open question, but the resulting publicity is destined to have good results, in that it will open the eyes of the general public to the improper, unsanitary and inhuman conditions under which a great part of the residents of many large cities are compelled to live and work. The legislative investigation is being made as a result of the introduction of a bill placing the minimum wage permitted to be paid to women workers at $12 a week.

RICHARD OLNEY, of Massachusetts, attorney-general and secretary of state in the cabinet of President Cleveland, has been offered the important post of ambassador to England by President Wilson. Mr. Olney is in his seventy-eighth year and is hesitating to accept because of his age. That he would be a worthy successor to the late Whitelaw Reid at the Court of St. James is recognized, for he is able, patriotic and experienced in statecraft. Because of the difference between the two countries on the question of Panama canal tolls the post of American representative in England is more important just at present than for many years past. While secretary of state under President Cleveland Mr. Olney insisted upon a strict enforcement of the Monroe doctrine and showed himself possessed of the necessary backbone to secure his country's rights. Other prominent men who are mentioned for important diplomatic positions abroad are Wm. McCombes, of New Jersey, the brilliant young lawyer who managed Governor Wilson's campaign for the presidential nomination and is now chairman of the democratic national committee, and Augustus Thomas, formerly of Missouri, the well-known playwright.

Circular No. 206 of the Bureau of Animal Industry, United States Department of Agriculture, Washington, gives the following excellent advice: "In order to obtain eggs, it is necessary to have healthy, vigorous stock, properly fed. Nature provides worms and bugs, seeds, greens, grit and water. To replace these, poultrymen feed eggs, meat, (green cut bone or beef scrap), milk or cottage cheese, wheat, oats, corn, barley, etc., lettuce, cabbage, kale, mangels, alfalfa, clover, etc.; grit and oyster shell; water."



The Telescope of Speech

The astronomer, by the power of his telescope, becomes a reporter of the movements of a hundred worlds greater than ours, and the student of celestial activities millions of miles away.

He points his instrument at any spot in the heavens, and his sight goes rushing through space to discover and inspect a star hitherto unknown.

Up to the power of his lenses, his vision sweeps the universe.

As the telescope may be focused upon any star, so the telephone may be focused upon any person within the range of its carrying power.

Your voice may be directed anywhere in the Bell System, and it will be carried across country at lightning speed, to be recognized and answered.

The telescope is for a very limited class, the astronomers. The telephone is for everyone.

At the telescope you may see, but cannot be seen. At the telephone you may speak and be spoken to, you may hear and be heard. By means of the Bell System this responsive service is extended to the whole nation.

A Big Hot Spark—A Quick Start

New Lauson Gear Driven Magneto is built right into the engine and entirely eliminates batteries, their expense and troubles Won't wear out or get out of order. Throws a big, hot spark in any weather that never weakens nor fails. Can't burn igniter points.

LAUSON FROST KING
Gasoline Engines

Starts Easily.—The Frost King starts on the magneto without turning over. Requires no cranking. Positively Frost Proof.
Takes Less Fuel and oil and delivers more power because of special features and design. Replacements due to wear and breakage are all but eliminated by having the parts case-hardened or fitted with adjustments.
Perfect Balance.—Every part is accurately ground and fitted. Engine stands perfectly quiet even under full load—another proof of durability.
Satisfaction Guaranteed—or money returned. Shipped quick from all transfer points. Write for catalog stating power required and name of Lauson dealer.

1 to 100 H. P. All Types.

The John Lauson Mfg. Co.
202 N. W. St. New Holstein, Wis.

Original and Only Low-down Spreader.

Pulverizes. Never Clogs. 3-row Spread. Solid Bottom.

Light and Strong.

Spreads all Manures.

New Idea Manure Spreader

Not a mere *unloader*—does not dump in piles. The only spreader with double beaters and revolving distributing paddles, which cut the manure into shreds and spread it *evenly* over three full rows—5 to 7 feet. No choking. No bunching. Low-down. Easy to load. Tracks with standard wagon. Easy haul for double team. Solid bottom which never warps, breaks or wears out. No cog or bevel gears. Only perfect endless conveyor—cannot slip. All power direct from rear axle. Only two levers to operate. Strong metal wheels. Absolutely necessary for every grain and fruit farmer.

Write for New Catalog. Shows pictures and describes in detail. New Idea Spreader Co., 144 Sycamore St., Coldwater, Ohio

Big Money in Oats
AND HOW TO GROW THEM

I want every reader of this paper to write me for my new book, "Big Money in Oats and How to Grow Them." Just mail me a postal or a letter giving me your name and address and I will send you this valuable book together with a free sample of our pure Canadian Grown Regenerated Swedish Select Seed Oats. This book was written by Wm. Galloway, Professor M. E. Bowman and other seed experts. It contains priceless information worth real money about how to make big money in oats, how to make a seed bed, how to start a seed patch, how to make oats stand on rich ground and how to grow a bumper crop of oats. It is profusely illustrated by photos taken from actual life and contains, besides, facts, figures and opinions given by farmers all over the country. Now, remember, this book is free for the asking and we will send it to you together with a free sample of the oats or, better still, enclose 10c to cover packing and postage, and we will send you an extra big sample packet, or for 25c we will send you a triple size and for 50c a packet three times the size of the 25c packet. In addition to this, after you have had a chance to examine the sample oats, if they suit you, as I know they will, you can return the empty packets to us and we will accept them the same as cash in part payment on any future orders you may send in. Can you beat this offer? Never.

Feed Your Old Oats to the Hogs

Better feed your old oats to hogs or the horses, or sell them. You can afford to do it when you stop to figure up the net results between our seed and ordinary seed. For instance, which is cheaper—Genuine Imported Regenerated Swedish Select Seed Oats that germinate nearly 100 per cent—every oat sprouting—Fresh, Hardy, Full of Life and Vitality—or oats that are half hulls full of weaklings, that plainly prove they are inferior and run out? Our thoroughbred Imported Canadian oats cost a little more than common seed at the start, but if you pay twice the price and receive common seed for nothing, our oats would be cheaper and bring in the most profit. It's net results that count. Here's the proof.

J. E. Andrews, Dassel, Minn., writes: "Yielded 105 bu. to acre." Oscar Kling, Alamosa, Colo. writes: "Yielded 141 bu. to acre." H. Hendrick, Roanoke, Ill., writes: "Got 95 bu. from one acre." A. J. Barber, Clinton, N. Y., writes: "Galloway, you are right. Last spring I bought some seed oats of you. Just threshed. Yielded 80 bu. per acre."

Write For New Free Oats Book

We'll tell you how to put your oats growing back on a money making basis—Discard your old in-bred seed oats and start your crop this year with our Regenerated Swedish Select Seed Oats. They'll make you big money.

You can raise 75 to 140 bushels to the acre with our seed. Imported direct from Canada. Extra fine. Send for free sample. It speaks for itself. Our customers who bought from us last year raised from 75 to 140 bushels to the acre against one-eighth to one-half as much from their old seed, which proves our statement that farmers need a change of seed oats in this country.

We specialize on extra fine Seed Oats on our big Canadian Farm—new, clean land—and grow the Genuine Regenerated Swedish Select Oats which have broken all records. Specially bred to suit climatic conditions in the U. S. Matures from 12 to 15 days earlier than other kinds. Extra large white berry. Thin husk. Stiff straw. Tremendous yielder. Rich in protein, and just the oat you have been looking for.

Why not start a seed patch on your farm this year? It has paid others big. It will pay you.

Write us early. The demand for our seed is tremendous. Last year we had to return orders we could not fill. Write early. Demand tremendous. Supply limited.

Address

Seed Oats Specialists Box 102, WATERLOO, IOWA

Save Your Thresh Bill

IT'S UP TO YOU to say what thresher will thresh your grain this season. It's your grain. You worked hard to grow and harvest it. You pay your thresh bill. You cannot afford to hire an outfit that will waste your grain. You have worked hard for a profit and you should have it. You cannot afford to divide it with the straw pile. Your good business judgment tells you so.

Every bushel that goes into your straw pile is money right out of your pocket. You can save the amount of your thresh bill by hiring a

Red River Special

to do your threshing. It will save more grain for you. It will waste less of your time. It will do your job quicker. It will clean your grain better. It will pay you. It is the only thresher made which uses the only true and sure method of separation. It beats the grain out of the straw just like you would do with a pitchfork.

The Big Cylinder, the "Man Behind the Gun," the patented Grate and Check Plate and the Shakers which toss the straw up and *beat it* like you do with a pitchfork, save all the grain for you, whether it be wheat, oats, rye, barley, peas, rice, alfalfa, timothy, or any other grass seed.

J. J. Porter and nine other farmers of Geneseo, Kas., Wm. Bronner and four other farmers of Andover, S. Dak., A. J. Weber and twelve other farmers of Crawford, Texas, say: "The Red River Special does the best work in grain saving and we want no other."

Have your threshing done this year with a RED RIVER SPECIAL.

It will *save your thresh bill.* Write for proof.

HORTICULTURAL TOPICS

THIS department is conducted by an experienced horticulturist. All questions relating to horticulture will be answered if of sufficient general interest to warrant a reply in this department. Communications and inquiries upon horticultural topics should be addressed to this office.

DIFFICULTIES OF HOTBED WORK

The beginner in the use of artificial heat for starting garden plants is often puzzled to know why so many things go wrong. He does not get expected results, and fails to see just where his preparations have come short of perfection.

The first disappointment is that the bed don't heat up as quickly as it should. That may result from the fact that the manure was not really fresh. Old manure that has been once heated is not fit for a hotbed. Use only what is fresh and not too much straw. It is best that not over half the bulk should be straw. Again the trouble may come from lack of moisture. As the bed is being made it is well to use the sprinkling pot—not to make the material wringing wet, but to have an even moist condition all through.

Another trouble is that when it begins to heat, the heat seems to be uneven. Some places will be cold while others are warm. This may result from having frozen lumps of manure in some parts of the bed. These lumps should have been either thrown out or broken up and well mixed with the finer parts. Or the uneven heating may be because the manure was not evenly placed. Perhaps in your hurry you failed to level it, and left it a foot thick in some places and two feet in others. You should see to it that before the dirt is put on the manure is of an even thickness all over the bed, and well tramped down. If you fail to tramp it, you will notice after the plants are started that there will be settling in some places, great hollows will appear much to the injury of the plants. Then you will perhaps notice that the plants near the frame at the edges of the bed are very slow to start and do not grow half as fast as those in the middle, and you will wonder why this trouble has come upon you. It is simply because you failed to make your bed of horse manure wide enough and there is no heat at the edges. There should be manure enough so that when the frame is put on to receive the soil, the manure will project about a foot all about the outside of the frame. Do this and you will have just as good heat at the edges as at the center.

Then, perhaps, you will notice that there are spots in the bed where the plants do not look thrifty. They wilt easily and look dry. This is the result of too little soil. Four inches of rich garden soil is little enough. Some recommend six inches, but if you have good four inches your plants will thrive. But unless the manure has been evenly spread, the leveling of the soil will leave it thick in some places and thin in others, and the result will be some unthrifty plants.

Perhaps after the plants are well started there comes a frosty night and in places near the edges some plants are nipped. This is the result of loose fitting. There is a crevice somewhere. The frame should be made of straight boards and the corners squared correctly so that the sash will fit tight and even. If this is well done there will be no scorching of plants in any ordinary frost, if the frame is well made.

Or it may be that the frost creeps in through a cracked glass. This is a point to watch and you had best repair the break before the frosty night comes. Perhaps there will come a night when there is a heavy freeze, and the single glazed sash will not be enough protection. Then you should have your mats, made of hay, or rye straw—for a complete cover. But if mats are not ready, horse blankets will do. Or old carpets will help out in the emergency.

If you are having your first experience with hotbeds, you will need to watch things pretty closely when the first hot suns come. You may go out to work some morning and coming in at noon find your plants all burned up, or at least badly wilted. This is because the heat of the sun under the glass is too much of a good thing. The plants must have ventilation. Every morning after the weather is

IT'S better crop insurance to buy Devoe & Raynolds Co.'s Pure Paris Green than to take chances on a good deal of the paris green sold in the market. The name "Devoe" is a safe guide in buying.

BIG FREE BOOK ON

ALFALFA

HOW TO GROW IT ON YOUR LAND

"Alfalfa—Wonder Crop," is the title of a new book just issued by us. It contains a fund of priceless information on alfalfa growing secured from many sources; United States Government, State Experiment Stations, the best posted authorities and successful growers. This information was secured at a great cost of time, money and research, and yet it is yours for the asking without cost. This book will convince you that your farm has some land on which you can grow alfalfa; it tells how to get results from the first planting, how to select the field and prepare the soil, including fertilizing, plowing, liming, and how to prepare the seed; when to plant, how to plant. It tells you what to do during the growing period, how to get bigger than average crops, and how to cut and cure. This book is worth many dollars to the farmer interested in growing alfalfa, but we gladly send it without cost or obligation of any kind if you answer at once. Don't put it off—write for free book today.

GROW ROOT CROPS for Bigger Live Stock Profits

Leading feeders are now substituting Mangels and other roots with best results for part of the grain ration of stock. These act as a food tonic and conditioner and possess great feed value. Mangels per acre will yield better than Corn as regards total feed value. Vaughan's Seed Store is U. S. headquarters for highbred Turnips, Mangels and Carrots. **New Mangel Barres Sludstrup** Introduced by Danish Gov't as world record holder for high dry matter content—real feeding value. Price ½ lb. 25c; 1 lb. 80c postpaid, or liberal trial packet, free booklet, "Root Crops" and seed catalog, 10c.

VAUGHAN'S SEED STORE,
Dept. F 31 to 33 W. Randolph St., Chicago, Ill.

The Gardner Nursery Co.,
Box 505 Osage, Iowa

so warm that no frost falls at night the sash must be raised at one end. In moderate weather raise them one foot; in very warm weather remove the sash entirely. When the plants are very weak and spindling it is because you have used too much seed sowed too thickly.

"HOW WILL YOU HANDLE YOUR BERRIES?"

Growing berries successfully is one thing, and selling them at a profit is another and very different thing. The successful cultivator is not always the good salesman. There are several ways of selling the berry crop, and each way is preferred by some berry men because of certain conditions which seem to make that way the best for them. Possibly you have a neighbor who has his way of selling his surplus, but do not hastily jump to the conclusion that his way is the best way for you also. It may be that your situation is different.

Some berry growers who despise any small business like retailing will pack up their berries and sell at wholesale to the merchant. Perhaps if it is convenient they will send at once to the commission man of the city. Of course, they are prepared to take whatever the commission man in the goodness of his heart is willing to send them, be it more or less and usually it is less.

It pleases your local grocer to have you willing that he should handle your crop, you, of course, standing all loss from the berries which are left over. He will be willing to allow you a wholesale price, and will retail them at an advance of about three cents a box. Also he will ask you to take your pay in trade. In good nature and glad that he is willing to take the work of retailing the fruit off your hands you agree to this proposition. So you get even less than the face price for your berries because you allow your dealer from 7 to 15 per cent profit upon the goods which you take.

There is a better way than this, that is, a better way for the berry grower. This way is good enough for the local merchant and he will never complain as long as you agree to it. The better way for the grower is this. Sell your berries to the consumer from your own wagon. This is the way to profit. There is no other way to compare with it. It is the way of the successful man. Many a farmer near town who has boys, and who likes to grow berries, can start the boys upon a successful business career by allowing them the use of a horse and spring wagon. An active, ambitious boy who has reached the age of from twelve to fifteen years where he begins to feel the need of cash, and a growing desire to make it for himself will jump at such a chance. Encourage him to pack the berries in an attractive manner. Let them be sorted to an even size and only good fruit be used, every berry being solid and usable. Cover the cases for the drive so that no dust shall soil the fruit. Use colored and fancifully cut tissue paper to improve the looks of your load. Such things attract and hold the attention of the lady customers. Take certain streets, calling at every house, and tell the people that you will visit them every day or every other day, as the case may be. Make a list of the people who are buyers, or probable buyers; have your name stamped upon every box sold. It is important that they should know your name. "John Jones, Berryhill Gardens," or "Will Smith, Strawberry Glen," will do much to make friends for you and win confidence.

By the second or third trip you will have weeded out all the people not willing to trade with you, and will have your list of customers pretty well settled. Do not be afraid to trust, but tell them it is all right if pay comes at stated intervals. You will find many whose money comes in at some monthly pay day, and who are just as good as the gold and just as honest as you are.

You will soon come to enjoy your business, and the buyers will be glad to have you come. The assurance of fresh fruit, and at a price no higher than is usually paid for the stale article from the grocer will bind them to you with hooks of steel.

The boy will realize upon the average three or four cents more per box than would be possible under the wholesale way of marketing. And that means that your crop will bring you a third more than before. And besides you have done your boy a world of good, for he has acquired business experience, has learned how to meet people, and sharpened and developed his instinct for trade. In a few days now the berry fields will be green and after a few more days white and then in two weeks they will be red with the ripened fruit. Prepare now to make the most of your opportunity.

RENOVATING THE OLD GARDEN.

To the Editor of The Homestead:

In traveling over the country I see a great many gardens which appear to be rather run out and are not producing as they ought to be. The weeds seem to have the upper hand of everything, and the ground is not in the condition it should be for a profitable production of vegetables for the use of the family.

On making inquiry I find that as a usual thing these gardens have been in use for several years without perhaps any manuring or very little at most. Of course, the ground was good when the gardens was first made there, but by constant cropping, and letting the ground be bare in the winter, the land has as a natural consequence become rather exhausted, and the physical texture of the land is bad. All such gardens are in need of a renovation.

Of course, it is natural for us all to want to make all out of the gardens that we can, and to this end it seems that some people think they must raise some crop on the garden every year. This is all right so far as it goes. The land should have something as near every year as it will produce, but in order for a garden or any piece of land to produce a crop every year, it must have an abundance of fertilizing.

Several years ago I moved to the farm on which I am now living, and the garden was in just about such shape as those I have spoken about above. I could raise only one thing successfully, and that was most all kinds of weeds, which did not furnish much food for the family. I thought I would make an experiment which I had in mind, and the early fall following the first year I put three heavy horses to a good solid plow and gave it a very thorough deep plowing. Following this I sowed it in rye, and scattered all the hen manure that I had over the surface, and during the winter I also gave it an application of coal cinders.

The next spring when the rye got about waist high I took this same plow and turned the rye under, but following this plow I subsoiled. This stirred the ground about twice as deep as it ever had been stirred. I then gathered up all the hen manure again that I had, also went to the hog pens and gathered all the hog manure that I could get, and with the addition of just a little manure from the barn I gave it a thorough application again, working this manure well down into the soil with a disk and harrow. Then I sowed this in cowpeas and such a crop of vines I never saw before, and

16 NEW BULBS FOR 20 CTS.

1 New Yellow Calla, very fine and valuable.
2 Emerald Vine, most graceful and elegant climber.
3 Mellanthi, a most showy flower like Cannas. Leaves make a fine winter vegetable cooked like asparagus.

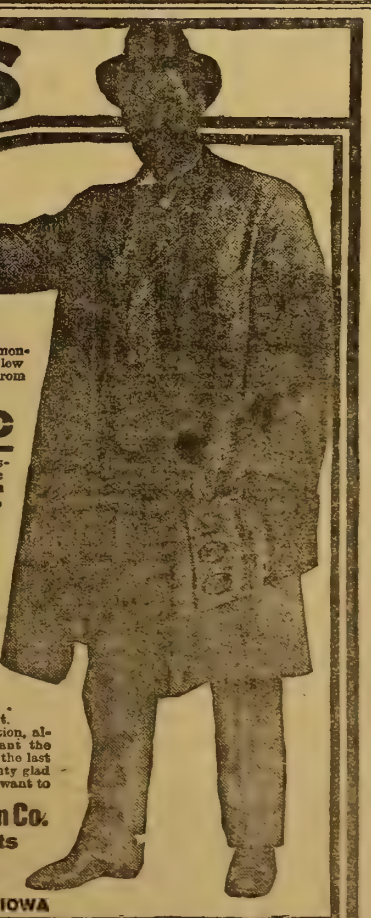
PURE SEEDS



GENUINE—UNADULTERATED

Listen Just One Moment I want you to fully realize that no matter how valuable your land; no matter how much you hoe, weed and dig; no matter how much the sun shines nor how much it rains; nor how much you irrigate your land. Your efforts are all in vain and your money lost if you get cheap seed. Why take a chance—even if you get your seed for nothing—of sowing stale, low germination test, inferior seed when you can get **Absolutely Pure, Genuine** and **Unadulterated Seed** from us. We sell only one quality—the best; no second or third qualities.

BIG 50c COLLECTION, 10c

Here is the most valuable seed offer ever offered by anyone. Just send us 10c to help pay postage and expense of shipment and we will send you a big envelope containing five regular 10c packages of our best seeds. This package will contain one full 10c packet each of **Champion Pickle Cucumbers, Matchless Tomatoes, Prize Head Lettuce, Superb Globe Onions,** and a **Large Packet** of **G. B. Mixed Sweet Peas** and never has anything like it ever been offered before. Then here is another thing. **The large envelope in which these five varieties** are packed will be accepted the same as 25c on all future orders you may send in amounting to $1.00 or more. Now, remember, we could not afford to send you this big 50c collection at any such price if it were not for the fact that **we know you will be pleased** with the **pure seed** that we send you and that **we will get your future orders.** Now write us today just enclosing 10c in your letter and you will be delighted with the results.

Get My FREE Seed Catalog IT IS NEW, ORIGINAL AND DIFFERENT

In my left hand I am holding the most original, unique and different seed book that ever has been published. It is profusely illustrated with garden, flower and field scenes and contains the choicest assortment of pure genuine, unadulterated farm, field, garden and flower seeds that you have ever seen in a catalog, and what is more, you can save a lot of money by ordering from this book. Now, remember, this book is absolutely free and will be sent you postpaid on receipt of your request for it. And don't forget at the same time to enclose 10c for the big 50c collection, although of course you are welcome to the catalog even if you do not want the big seed collection. Now don't put off ordering until the last moment. Spring will soon be here and you will be mighty glad to have these seeds on hand at just the moment you want to use them.

SEED POTATOES FOR SALE—Pure-bred, best varieties. Address Guy Anderson, Ogdensburg, Wis.

have seen but very few since. They were so rank that it was out of the question to plow them under as they stood. I had to take a good sharp hoe and cut them down so that I could run the disk over them before I could plow them under with any degree of success.

All of the neighbors said they would cure them for feed, but I was determined to build up this old garden if it was possible. So I plowed them deep and sowed again to rye, the following spring turning the rye under again and then planting my garden stuff. I think that I made the most stuff that year off of the garden that I ever saw made on a garden of its size.

Everything grew very rapidly. However, I was troubled some with weeds, and it took me several years to get rid of the weeds, as they had been let mature for several years and the ground was full of seed. Since that I have always practiced the turning under of rye and peas every few years and also have given an application of manure every year or two, as I thought it necessary.

If, however, you have only one garden spot that is fenced, it may be necessary to move the garden some distance from the house every few years, in order to give the garden a renovation. I find it now most convenient to have two plots fenced in, and I want to give one a rest. I have the other to grow my garden stuff on, and am not put to the inconvenience of going off some distance from the house for my supplies.

I would say to the reader, if your garden is in the condition as described above, if for nothing else, for experience sake try what I have said and see what the results are. I know from experience that you will be more than paid for your trouble, and it is a very good way of converting an unprofitable garden into one of profit and pleasure. Subscriber.

SAWDUST AS A MULCH AND FERTILIZER.

A subscriber at Herman, Minn., asks if sawdust is a good mulch for young trees and if it has any value as a fertilizer in a truck garden. It may be used in moderate quantities as a mulch, but it cannot be recommended as a fertilizer. The purpose of a mulch is an application that will retain moisture by preventing evaporation caused by hot suns. Sawdust lies close and heavy and holds much water in itself. It will, therefore, answer the purpose of a mulch, and yet it should be used in moderation, for a heavy body of it tends to make the soil sour. We would advise an application about three inches in depth as sufficient.

There is also a difference in sawdust and we would prefer to use that from soft wood like poplar, pine and spruce to that from oak and ash.

There is no fertilizing value in sawdust until it has thoroughly rotted. It is simply woody fiber in a pulverized form, and the roots of plants can draw no sustenance from it. After it is well rotted it is valuable. Rotten wood when well mixed with the soil is a valuable aid to nearly all plants, more so upon some soils than upon others. It is especially useful in compact clay soils which need some application to lighten their texture. It is also good for sandy soils which need a humus content.

The best way to prepare sawdust for use in gardening or for manuring for any crop is to mix it with an equal amount of earth and let it rot for two years before using. This will give it time to decompose, and the soil well mixed with it hastens the process. Never use fresh sawdust upon land, for it will be injurious rather than helpful.

LOW COLONIST FARES.

GASOLINE SCARCITY.

The power-driven vehicle can no longer depend on its present fuel. The demand for gasoline has overtaken production. During the last decade the oil market has been readjusting itself to radically new conditions. This has been brought about by many new applications of oil products for developing heat and power. Crude oil was formerly looked upon simply as the raw material for the production of illuminating and lubricating oils.

United States government reports show that the advancing price of gasoline is due solely to inevasible laws of supply and demand. No corporation or combination of corporations is responsible for the fact that demand has overtaken production, and that further increase in prices are now impending.

American gasoline and naphthas were formerly obtained solely from high-grade paraffine crudes of Pennsylvania and Ohio. These are the most valuable oils in the world, and highest grade Pennsylvania crude now actually brings the same price as refined kerosene in bulk.

But unfortunately Pennsylvania production has fallen from 33,000,000 barrels in 1891 to about 9,000,000 barrels at the present time. However, at present prices even this decreased production represents over $18,000,000.

Ohio has decreased in production from 24,000,000 barrels in 1896 to less than 9,000,000 barrels during the year last past.

Again, the zenith production of our own state of Indiana was in 1904—over 11,000,000 barrels—but the present yield shows a shrinkage of nearly 90 per cent maximum.

The United States Geological Survey states that the general decline in production "would doubtless have been much greater but for the effort to apply laws of supply and demand by increase of prices. Prices advanced so greatly during the year as to stimulate drilling, even in the old New York and Pennsylvania pools, and so checked the decline. Formerly this plan has not been so successful. In the mid-continent field also, it checked the decline, so that the product will come within 4,000,000 barrels of the maximum output."

Canada, also, has fallen off one-third from her highest production of five years ago, and the only new field in sight is Tampico, in Mexico, which has grown from nothing three years ago to 6,000,000 barrels in 1912.

About the only home fields not showing decreased output are in California and Oklahoma. Three-fifths of the total yield now comes from these two states. And even the increased output of Oklahoma was insufficient to prevent a continuous reduction of stock on hand in 1912. Ninety per cent of the entire output of more than 220,000,000 barrels were crudes which yield a very low percentage of gasoline.

The following market prices of eastern, mid-continent and western crudes are fairly indicative of their relative gasoline content:

Pennsylvania	$2.05 per bbl.
Indiana	1.23 per bbl.
Oklahoma and Kansas	.83 per bbl.
California	.35 per bbl.

These prices of crude oil were correct as of January 25, 1913. Since that time Pennsylvania crude oil advanced seven cents a barrel on each of three successive days, standing now at $2.50 and $3 oil is freely predicted.

In order to obtain a single gallon of gasoline from refinable California petroleum, it is necessary to produce as by-products nine gallons of kerosene and thirty gallons of residual oils. Notwithstanding the steadily increasing output of western oil the price of gasoline on the coast continues to advance. It is now thirty cents per gallon at retail.

Large shipments of Texas oil formerly came to the Atlantic seaboard in tank steamers, but these shipments have decreased, as the Texas oil yield is now less than one-third its 1905 output. In view of the Texas shrinkage it is obvious that the opening of the Panama canal will furnish a large eastern market for California oil, but it is equally obvious that under existing conditions that will not materially affect the gasoline situation.

There are five different methods of increasing normal visible supply of gasoline.

One is importation. The Standard Oil Company has imported some Russian naphtha but Russia has no more to spare, as her own oil output is diminishing to such an extent as to increase the price 100 per cent in the last two years, and to warrant the Russian government in the promotion of alcohol production. The Shell Oil Company, of England, has also shipped some gasoline from Borneo to Canada, but the total quantity available abroad is insufficient for its home demands and America is still exporting gasoline to foreign markets at the rate of 15,000,000 to 20,000,000 gallons per month.

Another and more promising means of obtaining gasoline is by increasing the total yield of American crudes. A yearly production of 300,000,000 barrels in the United States is probably being approached faster than even oil men generally believe. But the largest increase in the production of gasoline in one year has never been more than 5 per cent while the production of power-driven vehicles will in all probabilities represent an increase this year of around 100 per cent. Furthermore, as already shown, the supply of gasoline yielding crudes is rapidly decreasing and the increased crude output will consist of Oklahoma and California asphalt oils, having insufficient gasoline for existing requirements.

The third means of supplementing the gasoline supply is the production of gasoline from kerosene. Chemists have known for some time that it was entirely feasible to extract gasoline from the chemically complex kerosene, as well as from coal, coal tar, and even wood. It is simply a question of cost, and of the profitable disposal of resultant by-products. Gasoline is now being made from kerosene, and a further increase in price will stimulate an increased output.

A fourth source of gasoline supply is its manufacturing from natural gas by compression, and its subsequent condensation to a liquid form. It is claimed that this process produced 13,000 gallons in 1910, which was increased to 50,000 gallons in 1911 and about twice as much in 1912. Some of the richer gases produce as much as eight gallons per 1,000 cubic feet, but the average is from three to five and one-half gallons. By triple and quadruple compression up to pressures as high as 400 pounds, very light liquids up to 85 degrees Baume are produced, these being slightly more stable than the products of fractional distillation.

The fifth and last means of increasing the available gasoline supply is by lowering its Baume gravity. It is probable that the specific gravity of commercial gasoline will be dropped another notch by next summer. Much of the liquined-gas gasoline is used for blending with heavier distillates, and it naturally requires other than gravity tests to determine the characteristics of such blended gasolines.

With the exception of importation these various methods of augmenting the available quantity of gasoline are now in active operation, and every increase in price is a stimulus to additional output.

This brief review of market conditions shows that the problem of an adequate supply greatly overshadows the collateral problem of the increasing cost of gasoline.—[J. A. Secor before Indiana Auto Engineers.

Night schools of scientific agriculture are proving a popular feature with the farmers of western Michigan.

No-Rim-Cut Tires 10% Oversize

Nearly Half the New Cars Use Goodyears

Nearly half the cars which are built this year will be equipped with Goodyear tires.

At the New York Show, nearly half the show cars had Goodyear equipment.

Think of that—almost as many Goodyears as all other tires together.

And far more cars are now running on Goodyears than on any other tire in the world.

What Led to This Condition?

It is well to ask what led to this condition.

There must lie, somewhere, some immense economy. For men in these days keep good track of tire mileage.

And the result is this:

In the past year alone, more Goodyear tires have been sold than in the previous 12 years put together.

Two Savings

Two features in No-Rim-Cut tires mean an enormous saving.

One is the device which makes rim-cutting impossible. Without that device—with the old-type tire—23% of all tires become rim-cut.

The other is the fact that these patent tires are 10% oversize.

That 10% oversize, under average conditions, adds 25% to the tire mileage.

Non-Skid Treads

Then we invented a Non-Skid tread which excels every other non-skid.

It's a double-thick tread, made of very tough rubber, filled with deep-cut blocks. It grasps the road-surface with a bull-dog grip.

This thick, tough tread is immensely enduring. And the blocks spread out so the strains are distributed just as with smooth-tread tires.

This long-lived Non-Skid became at once the favorite Winter Tire.

Any Man Can See

Any man at one glance can see these advantages.

You can see why these tires can't rim-cut. You can see the oversize. And you know without telling that these things save money.

Then this tire, remember, is the final result of 14 years spent in tire building. For 14 years the ablest of experts have here worked to solve your tire problems.

About 2,000,000 Goodyear tires have now been tested out. As a result, these tires far outsell any other tire in the world.

You who pay tire bills should find out the reason. Make a test of No-Rim-Cut tires

Write for the Goodyear Tire Book—14th-year edition. It tells all known ways to economize on tires.

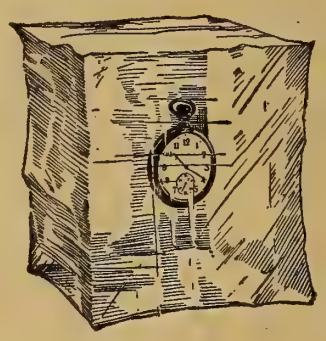
Was Your Watch Made This Way?

Was the watch you carry now baked in an oven, frozen in ice, adjusted to position, inspected 411 times and put through a 700-hour test for accuracy before it was considered fit for your pocket? If it wasn't, then it has never met the exacting tests that every South Bend watch *must* meet before it leaves the factory.



It takes nearly 200 days to *build* a South Bend watch. Then the rigid inspections and tests commence.

Can you wonder that the South Bend watch is a marvel of mechanical construction and accuracy? Can you question its popularity among railroad men, city men and farmers everywhere?

Even when a South Bend watch has left the factory, our interest in its on-the-dot performance does not stop.

We sell *only* through retail jewelers—15,083 of them. These men are alone able to properly regulate a watch to the buyer's personality. And that is necessary, as good watches run differently for different people.

This is a fact, but it's a long story to tell in an ad, so we'll leave that to the jeweler himself. Ask *your* jeweler to explain it. Ask him to show you a South Bend watch. Write for our free book, "How Good Watches Are Made"—a revelation to every reader. Brimful of good pointers. Get a copy before you buy *any* watch—it may save you money and disappointment. Start a postal off to us tonight sure.

COWS THAT COUNT—ON THE WRONG SIDE.

To the Editor of The Homestead:

Which way do your cows count, for or against prosperity?

An investigation of this subject recently made in one of the leading dairy states by a commission of competent men led to the conclusion that not less than two-thirds of the cows of that state were maintained at a loss. That is, that these cows do not give milk enough and of a good enough quality so that they pay for the feed and care given them from year to year.

This is a most startling statement and one which may well cause every farmer who keeps cows to set about it at once to find out whether it be true of his dairy or not, and if so how he can rid himself of the members of his herd which take money from his pocket instead of helping to make his dairy operations a success.

The answer to the first part of this question can only be shown by some sort of a test which will not only show what it costs to care for, feed and otherwise maintain each cow, but also set before her owner the real value in dollars and cents of the milk she gives in the course of the year.

There are various ways of finding out very nearly what the worth of a cow's milk is, but the best of these is no doubt the Babcock machine. By sampling the milk of every cow and subjecting it to this test, one need not be very long in doubt as to what the animal brings in as a gross return for her keeping.

It is not quite as easy to determine the cost of keeping a cow a year. The best figures must be more or less approximate. One must carefully figure in the cost of labor, the value of the feed and the worth of the money invested in cows and equipment. It will call for some bookkeeping, but it can be done and it is worth while. It is absolutely necessary, in fact, if we are to know anything about the worth of a cow to us.

Are we willing to lay out this labor and spend this time for the sake of finding out which way our cows count as breadwinners for the family?

"Life is so short and art so hard to learn." So will say the man who fights off this idea of knowing the value of the individual members of his herd. These men, it does seem to me, ought not to be satisfied to go on year after year, working hard themselves and paying out money to hire the help of other hands, just for the sake of dodging a bit of head and brain work. The only way to make a real success of dairying is to get out of the herd every cow which does not prove to the satisfaction of her owner that she has a right to be there, and a good claim to the care and feed given her.

Which way do your cows count?

E. L. Vincent.

GASOLINE ENGINES FOR CREAMERIES.

If the creamerymen of Wisconsin would equip their factories with gas engines of the required size and install small boilers for what steam they need in washing their utensils, they would annually effect a saving of more than $100,000. This was the surprising statement made by Prof. P. S. Rose, an engine expert, before the meeting of the Wisconsin buttermakers recently held in Milwaukee. Assuming that 100,000,000 pounds of butter were made last year in the creameries of this great dairy state, he estimates that the cost for power was but little less than $300,000 and he believes that this expense could be cut in two by a re-equipment of the creamery power plants. Many of the engines now in use in these factories are in poor repair and many are larger and more powerful than is required. Getting up and holding a head of steam is what costs in a steam plant. Every moment the plant is steamed up while not working is that much loss.

C. H. Hart, the secretary of the Iowa Buttermakers' Association, who is using a gasoline engine in his factory, declares that he is saving approximately 60 per cent of his fuel bill and

$25 to $40 SAVED

Here's the machine that fits in with my idea of what a separator ought to be—the right price and the right quality. The Beatrice stands alone on the separator market as the one high-grade separator at a fair-play price. Instead of paying $100 to $110, I paid $75 for 1000 pounds capacity. I have yet to find a more efficient and durable machine.

BEATRICE Cream Separator

It's no trouble at all to keep it as clean as a new pin and perfectly sanitary. The patented device will clean the machine and make it spotless *in less than 2 minutes.*

The close skimming it does is surprising. My skimmed milk doesn't show a particle of cream. The occasions I have had to put my hand in my pocket for repairs have been exceptionally few and far between.
—Farmer Onswon.

600 lbs. Capacity $55
800 lbs. Capacity $65
1000 lbs. Capacity $75

Gehl Bros. Mfg. Co.
112 S. Water St.
West Bend, Wis.

Charles Dodge, of Windsor, Wis., an experienced creamery man, has also reduced his fuel bill fully 60 per cent since he installed a gasoline engine in his factory. Mr. Dodge uses an eight horsepower engine, which in addition to running two churns and a separator, does considerable pumping.

Practically the same reports of satisfaction with gasoline engines have come to Professor Rose from every part of the country and if the reports of the creamerymen are to be credited it would pay every creamery and cheese factory manager to sell his steam outfit and install a gasoline engine in its place. The saving in power cost alone would soon pay for the new outfit and in addition he would effect a great saving in time and labor.

Construction and Up-to-date Equipment for the Dairy Barn.

By Clarence H. Hulbert, Dane County, Wisconsin.

GOOD producers, sanitary production and good management are the key words to success in the dairy business. Without proper equipment, economical management is impossible. The poorly equipped, improperly lighted and inadequately ventilated cow barn cannot perform its duty to the herd of cows which have the inherent desire to produce to the limit of their ability.

The first consideration in the construction of a dairy barn is its location or site. This must be chosen primarily with reference to light and dampness, since sunlight is the cure for all ills and dampness the cause of many diseases. Light is absolutely essential to oxidation and the drying up of stables, for in damp barns the dread of tuberculosis, abortion, infection of the womb, Johne's disease and scours is ever present. For this reason a barn with its long axis north and south seems to be the more desirable since it affords a better distribution of sunlight than does one with its long axis east and west. But in whatever direction the barn may face the water table should be at least eight feet below the stable floor to insure dryness.

Concrete is today generally accepted as the best material for stable floor construction. The question of whether or not the cows should face each other is largely a matter of preference since good argument can be advanced for either arrangement. If, however, the cows are to face out enough space should be left between the gutters to allow a manure spreader to pass, the alley sloping slightly to each side so that all liquid will drain off. The width of the gutter will vary from twelve to eighteen inches, depending on the size of cows kept, but should not be over eight inches deep. The stall floor should also slope one inch toward the gutter and will vary in length from gutter to manger from four feet eight inches to five feet six inches. Two feet should be allowed for the manger and enough for the feed alley so that a feed carrier can be put in or a feeding truck run up and down in front of the cows without coming too close to them. If the cows face in enough space will have to be left back of them to allow manure carriers to pass.

The stall floor will have to be covered with some non-heat-conducting material such as wood. For this purpose southern pine has been found to be best, and to obtain a sanitary condition the cracks between boards are filled wtih oakum and covered with boiling pitch. Cork brick is now being used by some farmers and has an advantage over wood in that it absorbs less moisture. The usual height of a cow stable is nine feet and enough space should be left between cows to provide 500 cubic feet of air space per cow. The window space required in dairies furnishing milk for city consumption is four square feet per cow, and this limit should be approached as nearly as possible. The whole stable should be sealed with some material which will provide smooth walls and ceiling, and a standard ventilating system installed.

The question of stalls is the next important consideration. The advantages of the metal stanchion over one of wood are so great that the increased expense will be easily compensated in providing this kind of a stall. Some of the more important advantages are that the metal stall does not absorb moisture, can be more easily kept clean and may be painted with little difficulty when desired. They, therefore, do not need to be disinfected so often and when this becomes necessary it is carried out much easier in the case of the metal stall. Their durability is a great advantage and they will last much longer and are kept in repair much easier than a wooden stall. The greatest advantage, however, that is possessed by the better makes of metal stalls is the fact that they are adjustable. This makes possible the fitting of the stall to each individual animal, and in this way the cows are kept clean with about one-half the work that would otherwise be required. It also does away with the disadvantage of making the stall platform wider at one end of the barn than at the other to accommodate different sized animals. While this method is practiced by many farmers it necessitates too much changing about of the animals, due to the fact that they keep growing, to be practical. The metal box stalls allow a greater amount of light to come into every nook and corner and air to circulate through them and for this reason are very desirable, and have the other advantages mentioned above over the wooden box stall.

In the arrangement of the stable the nearness to the feed and milk room must be taken into account. The milk room should be near but entirely apart from the stable, and so constructed as to be easily kept clean. For this reason running water is a great adjunct, but where this is pro-

—and Now, the Angle Steel Rib!

First, we made famous the All-Steel Door Frame. Then we startled the Silo World with our patented Inner Anchor. Closely following this, came the indispensable Saginaw Base Anchor. And with this 1913 season, comes the greatest sensation of all—the patented Angle Steel Rib.

The Result

What happened as the result of these inventions? Why, the Saginaw became King. In a single day, orders recently came in for 587 Saginaws.

So many men now want Saginaws that another large factory has just been built. That's number 5. Now, if the Saginaw were not as strong and immovable as a big city skyscraper, would men so overwhelmingly demand it? Would all these level-headed farmers pay out their good money for Saginaw Silos if the price wasn't right? Would America's leading Silo Authorities recommend the Saginaw if it ever produced anything but clean, bright silage? Just because most any Silo is a good investment, don't get the idea that it makes little difference which you buy. Men have doubled their Silo profits simply by choosing the right Silo.

DE LAVAL
CREAM SEPARATORS

Cheapest As Well As Best

Every sensible person wants the **best** of everything, but in many things the best is beyond their means and they must necessarily be content with something less.

In the case of the Cream Separator, however, the **best** is fortunately the **cheapest** as well, and it is of the greatest importance that every buyer of a separator should know this.

Moreover, the **best** is of more importance in the case of the Cream Separator than in anything else, since it means a saving of a waste **twice a day every day in the year** for many years.

It is true that DE LAVAL Separators cost a little more in first price than some inferior separators, but that counts for nothing against the fact that they **save their cost every year over any other separator,** while they last an average twenty years as compared with an average two years in the case of other separators.

And if first cost is a serious consideration a DE LAVAL machine may be bought on such liberal terms that it will actually **save and pay for itself.**

These are all important facts which evry buyer of a Cream Separator should understand and which every local DE LAVAL agent is glad to explain and demonstrate to the satisfaction of the intending buyer.

If you don't know the nearest DE LAVAL agent simply address the nearest of our main offices as below.

Save That Hard Work

Save Your Horses, too, and Your Money

Get the machine that operates with least effort—that gives no trouble—that makes more profit—that is so strong, so simple, so durable, as to make it the one *perfect* spreader.

You take no chances in buying the GREAT WESTERN. Over 100,000 farmers have used them during the last twelve years and swear by the *old reliable, time-tried*

Great Western

Here is the *proved* GREAT WESTERN of other years, except that it now has roller bearings and is made low down—waist high—*just right*—with safe clearance underneath for rough ground, obstructions and top dress on growing corn.

Wheels are *under the load*—wheel base is short; result, *lightest* possible *draft*—easy pull—a saving on horses and harness. Double heavy oak bolster, 16-inch malleable fifth wheel; stands the *hardest* pull under worst conditions and *won't pull out.*

Simplest Drive: Direct chain drive—no concealed gears, everything in plain sight; simple shifting device; entire mechanism is stopped while driving to or from field. Turns in its own length. Built for perfect permanent service—economical operation—lifetime durability. Buy your *last* spreader *now* by making it a **Great Western.**

Far More Economical and Satisfactory

Get Our New Spreader Book.

Things We Won't Do

We won't build them light or flimsy or hang the load between the wheels just to save a few inches in height.
We won't use a narrow front truck, because you couldn't top dress.
We won't cheapen the frame by using light construction with only two sets of rollers, or a half-apron, or any of the cheaper means.
We won't build a spreader in a cheap way just to sell, regardless of satisfaction in use.
We want you satisfied or no sale, and you will be with the GREAT WESTERN.

Things We Do

We build them right.
We put the wheels under the load so as to make light draft.
We use a heavy, double front bolster and heavy malleable fifth wheel, so you can't pull the front out.
We make a short wheel base so you can turn anywhere.
We use roller bearings throughout and an endless roller bearing apron with 102 rollers.
We build the "World's Best" Spreader to give you long service and the best work at the lowest possible cost. Ask for new spreader book, it's free.

AGENTS WANTED

WILL make a very attractive proposition to agents. I have a splendid assortment of land in Minnesota, North Dakota and Montana. Write me. My proposition includes a liberal commission for selling. Address

D. J. McMAHON,
818 Commerce Bldg., St. Paul, Minn.

vided it is equally as important to have a good drain to carry away the waste water.

A good, economical, practical one-room or three-room milk house, suitable for the average dairyman has been devised by the United States Department of Agriculture, plans for which can be obtained by writing the department. The cost of the one-room house is $104 complete when built separate from the barn. A milk room of similar design, however, could be constructed in connection with the stable at a much lower cost. The size of this milk room, according to the plan is and will, without crowding, accommodate the following equipment: A boiler, separator, cooler, milk tank for three cans, Babcock tester and apparatus and wash sink. The cost of this equipment bought new would amount to about $175, but such things as the sink and milk tank can be easily constructed by oneself.

With a stable and outfit of this kind, varied to suit local conditions, a good clean product can be made at a comparatively small expense, and the better grade of cows kept the greater will be the return, for they will be able with this equipment to do their best.

THE SEVEN AGES OF MILK.

The dairying industry is undergoing constant change and improvement. One noted milk specialist has furnished this rather humorous description of the evolution of the business of milk production. He describes the seven ages of milk as:

1. Neglect Age. Meaning anything and everything unsanitary, filthy stables and filthy cows; dust, flies, unclean cows and pails, and unclean milkers perhaps, using unclean milking methods, and careless cooling and storing of the milk.
2. Water Age. When 25 per cent to 50 per cent of water was added to the milk to make it hold out.
3. Skim Age. When all or part of the cream was skimmed and kept at the farm and the milk sent to town.
4. Preservative Age. When salicylic and boracic acid were used and then formaldehyde to keep the milk chemically sweet.
5. Tuberculosis Age. When milk was found to be, through the bovine bacillus, a transmitter of the white plague.
6. Pasteurization Age. When all uncertain milk was made safe through application of heat, 145 degrees F., for thirty minutes, correctly, honestly and thoroughly done.
7. Golden Age. When all milk shall be certified in the full and sanitary sense and meaning of the term as to environment and methods, machine clarification to take place immediately after milking, when the milk is fresh from the cow and before germ multiplication has commenced, either from foreign matter or slimes already present in the milk; then cooling and bottling at the farm, pasteurizing after bottling, to make assurance doubly sure.

HOG CHOLERA SPREADS EASILY.

To the Editor of The Homestead:

I was surprised to read lately that some people think cholera is not contagious. Some years ago I had a fine lot of swine. In one inclosure I had a few thoroughbred Poland Chinas, taking especial pains with them, feeding a good ration and I kept the quarters clean. Just west of me a very careless neighbor had a few hogs and just west of him a careful man's hogs got the cholera and then mine got it. My pet bunch was affected first and I lost nearly all my hogs. I thought then and still think some mean crow ignored my careless neighbor and hit me and the other careful man.

That was the only time my hogs had cholera in twenty-five years. Again a distant neighbor of mine bought some stock cattle in Omaha; he lived fifteen miles from the railroad, got a late start from his home station and stopped over night with a friend, keeping the cattle in the friend's feed lots and drove home the next day. About a week or ten days thereafter his own and his friend's hogs took cholera and most of them died. Evidently those cattle were shipped in a cholera-infected car. Such cases convinced me that hog cholera was "ketchin'."

Buy Silos With Harder License Plate And Be Safe.

Leading and responsible manufacturers furnish this license plate as it guarantees the user in the safe use of his silo and against law suits

Another Victory for Licensed Silo Manufacturers

Judge Ray of the United States District Court, in December, 1912, holds Silo Construction with Continuous Door Opening from top to bottom and with braces and reinforcing strips for the door sections, whether "applied to the walls of the silo perpendicularly or horizontally or whether applied independently or in combination with the braces," is an infringement of the Harder patent.

This decision is sweeping and all purchasers of silos should now insist on only those silos which have the above license plate.

Only the best and most reliable silo manufacturers in the country have been licensed under the Harder patent and have the right to use the license plate like the above.

Be sure to compare the above license plate with the one put on the silo when you purchase it and thus insure Safety. All our licensees supply this plate free to their customers.

Joe Davis—Martyr.

By Henry Field.

NO, YOU can't see Joe in the picture. They dug him out from under his wrecked sheller engine last night and took him to the hospital. The doctors are amputating his leg this morning and they think he may live, but he will be a cripple for life, just able to get around and that's about all.

Of course, there ought to have been a good solid concrete culvert there long ago. Everyone knew it, but the politicians who control our roads and bridges were too busy with politics to bother about it. Besides the lumbermen who furnished the rotten deadwood pine stringers were possibly opposed to concrete bridges as a useless extravagance, and they are generally influential citizens.

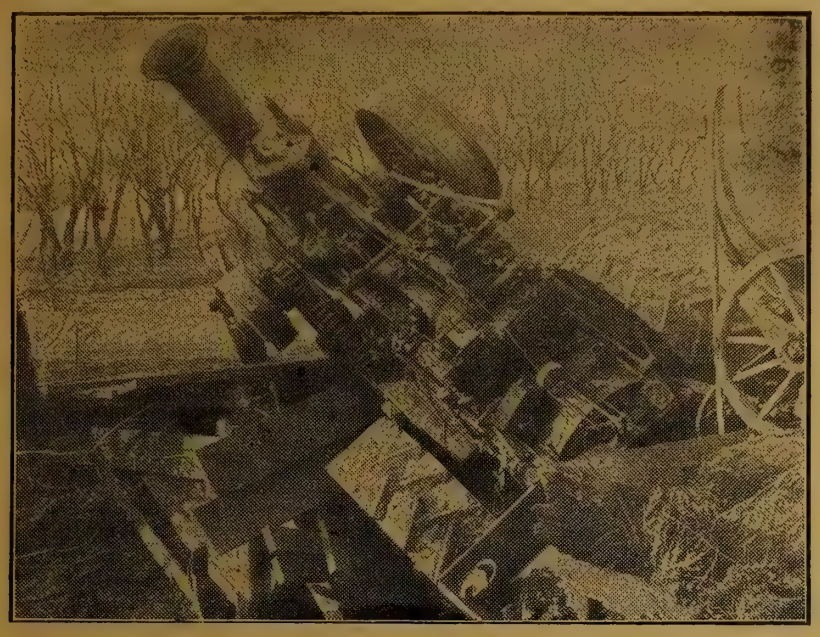
Joe lives just down the street from me. He is a steady, hard-working, good-natured fellow. Works at the seed house odd days when he don't have corn shelling to do. Told me just the other day that he had his shelling outfit about half paid for and hoped to get paid out on it this spring if he had a good run of shelling.

All he has is his shelling outfit, and a patient, hard-working wife and six small children. The neighbors are real good to them, but it will be a long time before Joe is up and around again and the payments are coming due on the sheller, and doctors don't work for nothing these days. And, by the way, some time I'm going to give you my opinion about doctors and their work.

The county supervisors were out and looked at the bridge and decided they were not liable for damages. I don't know how they figured it. I am no lawyer. I understand they are going to put in a new concrete bridge there now.

And meanwhile there's probably 50,000 such rotten pine bridges in the state of Iowa alone. Your man may get off luckier than Joe Davis did, or he may not. Why not abolish such bridges entirely?

Later—Joe's troubles are over. He was worse hurt even than we thought. And Mrs. Joe and the children, their troubles have just begun. May the God of the widow and the fatherless watch over her and her little flock. They've got a hard road ahead of them.



A HUMAN LIFE CRUSHED OUT BELOW THE WRECK.

ROTTEN STRINGERS, THE FOUNDATION OF TOO MANY BRIDGES.

PROFESSOR CRAIG'S LAST BOOK.

There has just come from the press one of the most interesting and useful agricultural volumes that has been published within the last decade. We refer to 'Sheep Farming" by the late Prof. John A. Craig. At the time of the author's death this volume was in the course of preparation and much labor had been spent upon it by Professor Craig assisted by the late William Watson. The work had been outlined in detail and much of the manuscript for it completed. The silent messenger stopped the hand that had contributed so much to the useful agricultural literature of his day and generation. Professor Craig had planned to perform a service for this branch of animal husbandry which would equal in its usefulness his previous volume, "Judging Live Stock." The sheep breeders of the United States are under obligation to Prof. F. R. Marshall for the completion of this volume. As a co-worker with Professor Craig, Professor Marshall knew possibly better than any other man the ideals that inspired this great teacher and investigator. Students and shepherds alike will rejoice that this material which has been so carefully garnered by a master mind is placed in a form to which all men now have access. It is published as one of the Rural Science Series thereby stamping it as the very highest class of agricultural literature. This paper is able to supply it to its readers at the regular publisher's price, $1.50.

A CALL FOR A CONFERENCE.

A new kind of conference is to be held in the city of Chicago, April 8th, 9th and 10th. Its purpose is to discover the grounds for the complaint about the high cost of living on the one hand and on the other hand to find out if possible why farmers are not able to obtain more profitable returns on their labor and on their investment. Compared with European countries America has no business organization as affecting agriculture. Our marketing methods are crude and our credit system, it is claimed, is far outstripped by other countries. We are in a rut, as it were, and the conference referred to is intended to discover why this is the case and secondly to formulate means of getting out of it.

The conference will be open to all persons who are interested in this subject. A program of addresses will be given by leading economists, railroad men, farmers and those who are skilled in the marketing of farm products as well as those who are recognized leaders in rural life movements. Mr. Charles S. Hollman, of 1804 Steger Building, Chicago, has been chosen the secretary of the temporary organization which calls the conference into being and those who desire further information in regard to it should communicate with Mr. Hollman.

THE SMITH RIVER VALLEY Montana

One of the extremely fertile valleys of Montana, about 60 miles long and 10 miles wide, situated in the south central part of the state between the Big Belt and Little Belt Mountains. This district has recently been connected with the outside world by the construction of a new railroad from Ringling, on the main line of the Chicago, Milwaukee & St. Paul Railway, through the valley to White Sulphur Springs.

Offers Unusual Advantages

The country is new, so land values are low. There is also considerable government land that may be homesteaded.

The fertility of the soil, together with the mild climate, assures large yields of wheat, oats, rye, barley, flax, clover, alfalfa and timothy, also all kinds of vegetables and small fruits.

Learn first hand of these opportunities—Special low fare settlers' excursions every Tuesday March 11 to April 29—Low round trip homeseekers' excursions on the first and third Tuesdays of every month via the

CLUB RAISERS WANTED

I want a local subscription representative in each town in Iowa, Illinois and Nebraska, where I do not have a solicitor at present, to take subscriptions for The Homestead during the winter months. An energetic person can make excellent money working for me.

A Justice of Peace and farmer made $347.00 during December, January, February and March last year with practically no effort on his part. Just as he happened to meet his friends he asked them to subscribe.

An old soldier has earned $386.00 in the last year and has not been away from his blacksmith shop to solicit subscriptions.

A lady who had sold extracts all her life took up our work last winter and has made over $300.00 this year without leaving her home town.

It requires no particular ability to become a subscription representative. There is no reason why you should not make from $300.00 to $600.00 this winter, looking after my subscription interests in your locality.

If you prefer premiums to cash commissions, write us for a list of the nice presents we can make you for raising a club in your neighborhood. We have everything useful to give away from egg beaters to sewing machines and gold watches. Address

James M. Pierce, Publisher Homestead, Des Moines, Ia.

THE MENACE TO SHEEP RAISING.

To the Editor of The Homestead:

The writer recently asked a farmer in a certain section, why there were not more sheep raised in his community, and he answered, without an instant's hesitation, "Dogs."

Inquiry reveals the fact that this menace of dogs is wielding a most deteriorating effect on the wool production of our country in general. The section of country just alluded to is one especially adapted to sheep raising. Thousands and thousands of acres of the land is rocky, and in many places too rough ever to be turned into profitable farm land. In some places the underbrush is of such a nature that sheep or goats soon would clean them up, thus opening the way for these now practically worthless lands to become valuable as pastures.

The discouraging phase of this falling off in the handling of sheep is the fact that it is among the farmer sheep raisers, where the business is carried on as a "side line" to general farming. These men, usually of only moderate means, cannot stand the losses entailed by sheep-killing dogs, so that the decrease in size and number of flocks is apt to be permanent, unless conditions are so improved that there is less risk in connection with the business. It is the vanishing of these thousands of small flocks that totals the paralyzing loss to the sheep industry of the country as a whole.

It is rarely ever the intelligent, well bred dog that preys on the flock. When he does, it is usualy a result of his running with "bad company" —mongrel dogs that have no permanent home, or, having one, they receive little or nothing to eat and no attention whatever as to their movements by day or night. It may seem an uncharitable statement, but the dog owners of our country are more to blame for the depredations of these curs on our sheep than are the dogs themselves. With care and judgment in the owning, feeding and training of dogs, this menace to our sheep industry would be practically removed, at least greatly mitigated.

One serious drawback encountered when any drastic measures are attempted in breaking up a gang of sheep-killing dogs is that you will rarely ever find a man who will admit that his dog will kill sheep, unless he sees the act with his own eyes. This seems to be a peculiar trait of human nature, the world over. Even where a man is convinced that his dog is a sheep killer, he will shield him as a rule. The writer once knew a neighbor to detect certain dogs in their raid on his flock of sheep. Upon informing another farmer that his dog was among the despoilers, and asking that the animal be killed, the owner flatly refused. The sheep owner shortly gave the dog owner his choice of killing the dog or abiding the consequences of the law. The owner of the dog, of course, knew how this would terminate, so he killed the dog, but he said to the sheep owner: "I always will remember this, I never will forgive you for it."

All this is absurd and extremely foolish. Owners of dogs should cooperate with each other in protecting their flocks, and this can be accomplished only by each one taking a more liberal view of the matter when it is ascertained that his dog is among the despoilers of sheep. In such cases, it need not be an invariable rule that the dog be killed, especially if he is a valuable animal, or if it is known that he is not regularly addicted to the destructive habit. He can be tied up till he forgets his depredations, or sprinkled with fine shot when caught away from home, anything to break him of running around. But dogs develop cunning and wariness as they grow in the habit of killing sheep, and this makes the routing, killing or capturing of them doubly difficult. When their depredations break out in a neighborhood, every man ought to be willing that, should his dog be adjudged "guilty," the most drastic measures be adopted at once. Let all have fair warning, that they may tie up their dogs; then, let every dog found loafing around over the country be shot. Where the use of poison is not restricted by law, let some neighbor who has been losing sheep give all ample warning that he will poison

$200

Takes possession of a fertile quarter section in

Southwest Kansas

There's not much vacant land left in Kansas. The five southwestern counties have remained unsettled and undeveloped because of inadequate transportation. The Santa Fe is building new lines to serve this territory, and thousands of farms next season will be put to creating wealth. This is your opportunity to get a good Kansas farm cheap. The terms are advantageous, the results certain.

If you had taken a Kansas farm ten years ago and developed it with intelligence and vigor, you, too, would now be lending money to Wall Street, as other Kansas farmers are doing. You, too, would have a piano in your parlor and an automobile in your barn.

The next best thing is not to lose this opportunity of securing a quarter section of this splendid wheat land.

Besides wheat, oats and barley, you can get good profits out of speltz, milo-maize and kaffir-corn fed to your own stock. Hogs thrive on milo and kaffir, and disease is unknown. Western Kansas farmers find peanuts a splendid hog feed, easily grown and easily fed. Broom corn brings fancy prices, and potatoes, garden truck, fruit and alfalfa will all do well for you.

There are some flowing artesian wells in this territory, and everywhere that wells have been put down water comes to within thirty to sixty feet of the surface. Irrigation by pumping will doubtless be commonly practiced, and the tremendously increased yields will pay big dividends on the small investment required for gasoline or oil driven pumps.

The climate is pleasant and healthful. Your boys and girls will find good schools. Churches, social clubs and farmers' institutes are being organized. Rural telephones and free delivery are coming in. In every way development is rapid, and only a few years will give you every advantage that older communities have.

You can secure a quarter section (160 acres) for only $200 down. The price is $10 to $15 an acre. The terms are astonishingly liberal. Only one-eighth down and one-eighth each year after the second year, with interest at only 6 per cent. You see you have two full seasons before a second payment on the principal is required.

For further information write for illustrated descriptive folder containing map and full details.

a fresh carcass where the dogs have been most active. There isn't the slightest doubt as to the effectiveness of this "cure," while the "dose" is sure to be administered to the right cur. Nor can any man reasonably object to such a course.

Another good plan is that of trapping the sheep-killing dog. He cannot break the habit of returning to the locality where he last operated, and by setting a good No. 2 steel trap in or around the most recent carcass, covering it so the dog cannot see it, he is almost sure to be captured, when he can be promptly disposed of, or, in case he belongs to some near neighbor, or is known to be an especially valuable specimen, it might be well to notify his owner, allowing him to be removed, on promise that he would be kept in close restraint thereafter. Again, it is quite probable that a genuine threshing while in the trap would effect a cure that would last the dog for all time. Hanging the carcass of a sheep up a few feet from the ground, just so the dog could reach it well, and near where it was killed, will prove an effective bait for him, and by scattering three or four large-sized traps directly under the carcass, one rarely ever will fail to capture him the first night. Still another means of capture is that of building a pen several feet in height, using poles about the size of a stove pipe and notching them so they will hold securely. The pen should be eight or ten feet square, each pole being a little shorter than the one immediately below it till, when the top is reached, there will be a slant from the bottom up. The carcass of a sheep having been placed in the pen as a lure, the slant of the pen will make it an easy stunt for Mr. Dog, (or wolf, either, for that matter) to scale up the sloping pen and drop down into the enclosure where the carcass is. But when he satisfies his hunger and attempts to leap out—ah, there. The slope is the wrong way, inside the pen and he is safe prisoner. Indeed, half a dozen animals have been taken in a single night by this method, and considering its cheapness and effectiveness, it is hard to equal—probably never has been and never will be. Subscriber.

GOOD ROADS AND CHURCHES.

Churches and schools, the two great agencies for the upbuilding of any citizenship are sufferers from the ills which come from thoroughfares of an inferior type. Decreased attention during periods of inclement weather, when either to drive or walk imposes at the best a hardship and is often an impossibility over poor roads, cannot help but be the natural result. Both the country and city districts feel this alike and in proportion to the character of their thoroughfares.

It cannot be expected that children will be compelled to walk to school if a sea of mud furnishes the only footing and this is too frequently true in places outside the urban centers and often so in the latter. Nor is it to be hoped that the horse will be employed to find his path along the treacherous road in order that the children may not miss their lessons. Those who deal in statistics claim that good roads everywhere would increase school attendance not less than 25 per cent. Poor highways are a much more potent agency in keeping children at home than illness.

Preachers bear striking testimony as to the effect miserable roads have upon the attendance at the churches. They can gauge it with accuracy and the percentage of decrease there is no less than in the schools. Good roads point not only towards larger audiences, but larger contributions and less donation parties. Thus they become a powerful agency for spiritual and educational growth.—[From a recent report by James R. Marker, state highway commissioner of Ohio.

More than 600,000 persons die from preventable disease in the United States every year. This is the estimate cited by the Association of Life Insurance Presidents. If each life were to be valued at $2,500 then the total money loss from these deaths would be $1,500,000,000.

LANDS AND HOMES

"Kuhn California Project"

In the Sacramento Valley

The canal, drainage and road construction completed, these lands are now being sold in small subdivisions. The soil, a deep alluvial silt loam, the best in the valley.

RAILROAD PASSES THROUGH THE LAND

Towns, Schools and Churches Near At Hand

CROPS—All kinds of fruits (including oranges and lemons); vegetables, seeds, berries, alfalfa, cattle, hogs and chickens.

WATER SUPPLY—Unlimited. Water delivered to boundary of every 40 acre tract. Canal and drainage system perfect.

TRANSPORTATION—Both by rail and river to the great metropolitan centers.

LAND PRICES—Low, and terms of payment easy.

If you want to secure a home in California, where climate, soil and water combine to work for you overtime, fill in this advertisement, and mail to us for full particulars.

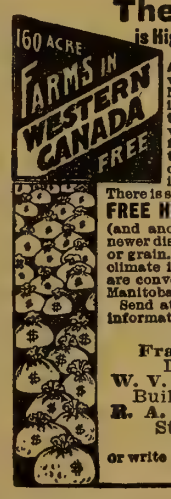
TEN YEARLY PAYMENTS

OWN THIS FINE ALFALFA FARM.

Situated in the fertile Republican River Valley of southwestern Nebraska, the greatest alfalfa-growing section of the country. 508 acres in all. 500 acres under ditch. Water right owned by farm and sells with it. Will sell either the 508 acres alone or will sell one or both of two improved quarter sections adjoining, also under ditch and with water right. Will take eastern Nebraska, Iowa or Illinois 80 or 160 as part payment and carry back remainder on farm. This is a great money maker. Has made me plenty of money the past 20 years. Close to McCook, a thriving town, with fine schools, churches, theaters and a $120,000 federal building under construction. Burlington shops located here with $50,000 monthly pay roll, affording excellent local market for all produce. Write me today. **W. N. ROGERS, Owner, McCook, Neb.**

ALBERTA

The Price of Beef is High and so is the Price of Cattle.



For years the Province of ALBERTA, (Western Canada), was the Big Ranching Country. Many of these ranches today are immense grain fields, and the cattle have given place to the cultivation of wheat, oats, barley and flax, the change has made many thousands of Americans, settled on these plains, wealthy, but has increased the price of live stock.

There is splendid opportunity now to get a **FREE HOMESTEAD OF 160 ACRES** (and another as a pre-emption) in the newer districts and produce either cattle or grain. The crops are always good, the climate is excellent, schools and churches are convenient and markets splendid in Manitoba, Saskatchewan or Alberta.

MONTANA LANDS

ONE of the finest tracts of lands in Montana, located in the famous Shields River Valley, the locality that won so many prizes at the land show. 18,000 acres in this ranch and can sell in small farms or sell the entire tract at a great bargain. Beautiful prairie land. Four large tractors now at work on this land.

SOUTHERN MINNESOTA LAND BARGAINS.

I HAVE a finely improved farm of 280 acres, two miles from good town, only 18 miles north of Iowa line, at $85.00 per acre. $2,500 cash will handle this fine farm—and it certainly is a fine one. Also have a fine farm of 320 acres at $70 per acre, and one of 400 acres at $75.00 per acre. Any one of these are worthy of your consideration.

11 sections of selected prairie land in Lincoln county, Colorado, at $9.50 per acre. This tract will make a fine colonization proposition.

18 sections in Billings county, North Dakota, in a very fine stock ranch with good buildings. Northern Pacific Railroad runs through the land. Will sell at $5.00 per acre. Small cash payment. Balance to suit at 6%. The coal alone on this land is worth many times more than the sale price of ranch.

In Wisconsin I have some very fine cut-over lands that are suitable for dairying. Finest water in the world. Greatest tame grass country in the United States. Lands are near markets and will sell at $7.50 to $10.00 per acre, upon your own terms. A small cash payment will secure you one of these tracts. Write for information concerning any locality you may be interested in. **Geo. R. Slocum,** 601 Pioneer Building, St. Paul, Minnesota.

"Jack Rabbit" Cars
Last 20 Years

This is not a claim. It is a certainty.

We have been building cars 20 years. The first American gasoline automobile was produced by the heads of this house, in 1893.

Still in use, are Apperson-made cars 17, 18 and even 19 years old.

Mechanical troubles have been practically unknown to Apperson owners for 10 years.

Of the 17,000 "Jack Rabbits" in use, the average age is 8 years. No "Jack Rabbit" has ever worn out.

We have the proof when we say—"You are insured a service of 20 years and longer in a 'Jack Rabbit' car." You can safely invest, if necessary, a lifetime's savings in a "Jack Rabbit" car.

It should be the only car you will ever need. It will cost you less for upkeep than any other car. Low fuel consumption. Low tire expense. Little or *no* mechanical expense.

It is upkeep cost, and not first cost, that is the *real cost* of an automobile.

Give the "Jack Rabbit" thorough consideration. To enjoy its great strength, beauty, comfort and endurance is *economy*. Write today for the "Jack Rabbit" catalog and get all the facts.

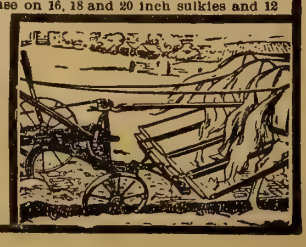
Save Work and Worry

This weight test proves its perfection

Gamble Equalizers save you work and worry—save the strength of your horses by evening the pull. Made for 3, 4 or 5 horses for all kinds of farm implements. They even the pull to within fraction of a pound. Give each horse its share of the pull—save strength of good pullers. Give bigger days work. Style of Equalizers shown here works 4 horses abreast—one in furrow, 3 on unplowed ground. For use on 16, 18 and 20 inch sulkies and 12 and 14 inch gang plows with cross clevis hitch.

Gamble Equalizers are Guaranteed

to give perfect satisfaction and work as we say or **money refunded.** Guaranteed to give plenty of room—no side draft—no rubbing horses' legs with tugs. **Gamble Equalizers** are the original—they are the best. Fully protected by patents—no others like them. Get the genuine **Gamble Equalizers.** Made to last a life time. Cost so little you can't afford to be without them. Do not accept a substitute. If your Implement Dealer does not have them, send us his name—we will see you are supplied. Send for free illustrated catalog showing full line of Gamble Equalizers.



STAR MANUFACTURING CO., Dept. 1, Carpentersville, Ill.

OUR LEGAL DEPARTMENT

THIS department is edited by a practicing lawyer who has had years of experience at the bar. He will give accurate and reliable answers to all legal questions when they are of sufficient importance to be of practical interest to any considerable number of our readers. Subscribers who desire questions answered in this department should base them upon a brief, plain, concise statement of the actual facts. To insure immediate attention inquiries should be addressed to "The Legal Department," in care of this paper; but as the inquiries sent are at times very numerous, thus delaying printed answers, those to whom it is important to receive an immediate reply by mail should remit $1.00, addressed as above.

LAW QUESTIONS CONSIDERED.

NOTE AND CONTRACT OF MINOR.

A Nebraska Subscriber.—My son, who is seventeen years old, is teaching a rural school. A book agent came along during school hours and induced him to sign a note for $33 and a contract to help sell a set of books to the school district, leaving the books in his charge. The next day notice to teachers was received from the county superintendent to beware of agents selling said books, and not to sign their notes or contracts, nor allow such agents to talk to the schools—that the books were not adapted to rural schools. When the school board was informed of the deal my son was told that the books were not wanted. The note and contract were signed by my son without my knowledge or consent. Have I any right as parent and legal guardian to declare the note and contract void and demand the return of the same canceled? The books were shipped back to the publisher. The note was made payable to the publisher. Has the publisher a right to retain note and contract and threaten suit, and thus annoy the boy, affecting his mind for his school work?

Answer.—You as parent and natural guardian have no right to declare the note and contract void, or demand return of the same, but because your son is a minor the note cannot be collected from him, nor can the contract be enforced by law. From the circumstances stated the boy seems hardly mature enough to be teaching school at all. The publisher has a right to threaten suit and to sue the boy, but it will do him no good, as such suit could be defeated on account of the boy's minority.

ADJOINING LANDS—TREES AND BRUSH.

A Subscriber, Weldon, Iowa.—A owns and farms a piece of land up to the partition fence between said land and B's land, which is covered with trees and brush. Can A compel B to cut the trees and brush back twenty feet from the line?

Answer.—He cannot. B has a lawful right to grow trees and brush on his land, right up to the line, if he wishes to do so.

INSPECTION OF ANIMALS.

A Subscriber, New Hampton, Iowa.—I moved from Illinois to New Hampton, Iowa, and took with me some horses and cows. The assistant state veterinarian, located there, compelled me to have said animals inspected. He would not have known I was there if my brother had not told him. No one asked him to inspect the animals, but he did so and made charges therefor. Had he such a right?

Answer.—The assistant state veterinarian had no right to inspect your horses at your expense, but if you brought along with your cattle no certificate of health, from the Illinois authorities, and said cattle were either registered or eligible to registry, the Iowa officer had a right to inspect your cows at your expense.—See supp. to Iowa Code, 1907, page 1097.

FENCING OF PRIVATE LANE.

An Iowa Subscriber.—A and B own adjoining farms adjacent to a public road. C owns a farm back of these two farms, off the public road, and he bought a strip of land from B next to the division line between A and B and holds a deed therefor and uses it as a lane, and there is no gate at the road. Is C required to keep up half the fence on both sides of the lane, or must A and B keep up the entire fences, each on his own side of the lane?

Answer.—Under the law of Iowa C is required to keep up half the fence on both sides of the lane.

COLLECTING SUBSCRIPTION TO PAPER.

Mr. J. R. Ruthven, Iowa.—A ordered a daily Iowa paper from a reporter, who said the paper would be discontinued at the end of the time paid for, but it continued to come after the expiration of that time until several written notices were sent to stop it. The publisher is trying to collect for the extra time. Can he do so by law?

Answer.—Where a paper is sent to a subscriber after his time of subscription expires he should refuse to receive it from the postoffice and request the postmaster to notify the publisher of the fact, and then the publisher cannot collect, but if the subscriber continues to receive the paper the law implies a contract on his part to pay for it, and the pub-

Your Wagon

A dollar's worth of Lucas Wagon Paint will double the years of your wagon.

The weather, not service, causes the most wear and tear on your wagons. Keep out the weather with Lucas Wagon Paint, and your wagons will last twice as long. It's a good time to paint your wagons **right now.**

Lucas Paints

have a 64-year reputation for making good. We prove with most exacting tests that all materials used are Lucas quality. These materials are prepared and mixed in the best equipped factory in the country, under the direction of employes of 25 to 40 years experience with us. They produce the toughest, most elastic and durable paint that is made. Every can is absolutely up to our standard in color, working qualities and weight.

FREE Book "When and How to Paint"

Lots of things around your home—such as furniture, walls, floors, carriages, implements, etc., need paint, varnish or enamel. This book tells what product to buy, what kind of brush to use, how long to let dry, etc. It's a book so valuable you'll want to keep it always. Send for your copy today, giving us the name of your nearest dealer.

lisher can collect for the time the paper is so received.

INHERITANCE IN IOWA.

A Subscriber, Lorimer, Iowa.—(1) If a man who has children marries a second wife and has no children by her, what share of his property can she hold in case of his death? (2) Can the husband in such a case make a will by which his children will get his wife's property at her death, or will it go to her brothers and sisters?

Answer.—(1) In case of the man's death, his widow will be entitled to the widow's allowance and one-third of all the balance of his estate. (2) Such a will cannot be made. If the wife dies after the husband's death and leaves no descendants, her estate will go to her parents or if they be dead, to her brothers and sisters, unless she makes a will otherwise disposing of it.

PAY FOR HALF PARTITION FENCE.

A Subscriber, New Sharon, Iowa.—Last July A bought 160 acres of land from B. C owns eighty acres adjoining on the south. Three or four years ago C put woven wire on the partition fence between his land and the 160 acres, but did not demand that B should pay for half of it. C now demands that A pay him for half of said woven wire. Can he compel him to do so?

Answer.—We think C is entitled to pay from A for half the woven wire This is a matter particularly within the jurisdiction of the fence viewers, and if C should call upon them to act they would most likely decide that A should pay C for half the wire.

STOCK FOOD—DEATH—DAMAGES.

A Subscriber, Prescott, Iowa.—A had twenty-five hogs which were well and in good condition, but he wanted to make them better, and for that purpose gave them a dose of patent stock food according to directions. In twenty-four hours afterwards eighteen of the hogs were dead. After getting the stock food they trembled, squealed and whirled around, acting as though they were in great pain. A local veterinarian says they were poisoned. Some of the stock food and a pig's stomach were sent to the state authorities for analysis, but they demanded $35 for examination. A is not rich and feels that he has lost all he can stand. What, if anything, can he do about the matter, and is the stock food company liable to him for damages?

Answer.—If the stock food given the hogs caused their death the stock food company is liable to A for damages. A would have to prove this fact in a suit, and his only means of proof would be the analysis of the food and the pig's stomach. A scientific examination would settle the matter and nothing else would do so.

NO INSPECTION NECESSARY.

A Subscriber, Woodbine, Iowa.—(1) Where horses are shipped from one county to another in the state of Iowa, does the law require them to be inspected? (2) Does the law require cattle or hogs to be inspected when shipped from one county to another in Iowa?

Answer.—(1) It does not. (2) Same answer.

LANDLORD AND TENANT—CROPS.

A Subscriber, Emmetsburg, Iowa.—I notice in The Homestead of January 2d where a subscriber at Aledo, Ill., asks a question in regard to grain rent and you answer that in his case the tenant is entitled to all of the straw and stalks. Suppose that the lease states that the landlord is to receive two-fifths of all crops raised on the premises, what would be the rights of the landlord and tenant in regard to straw and stalks?

Answer.—Where land is rented to a tenant who agrees to pay grain rent, that is, a certain portion of the grain raised on the premises is to be delivered to the landlord as rent, the landlord has no right to the straw and stalks raised on the premises, but where a lease provides that the landlord is to receive as rent, two-fifths of all crops raised on the premises, he is entitled to two-fifths of the straw and stalks, and the tenant to three-fifths. The word "crops" includes straw, stock, grain and everything raised on the premises.

SOLE RIGHT TO SELL GOODS.

A Subscriber, Hereford, Minn.—A has a contract with a certain medical company giving him the sole right to sell the remedies of said company in a certain county. C is engaged in selling the same remedies in that county. Can A restrain C from selling the remedies in the county by law?

Answer.—A cannot restrain C from selling the remedies by any direct legal proceedings against C. A's remedy is against the medical company. C could not handle its remedies without its consent, so A should have the medical company refuse to allow C to handle its goods within the territory allotted to A, and if the company refuses to do so A should sue the company for damages.

RULE OF SURVEY OF LAND.

Mr. Anton Karlson, Ashland, Wis.—Section 28 in township 47 of range 4 was found to be eighty feet short on the south line. The surveyor claims that in subdividing the section he should start on the east side and measure full quarter sections, leaving the west quarter sections short, and in cases where the section is large the west quarter sections would get the excess. Is this the lawful rule?

Answer.—The lawful rule is that where there is an excess or deficiency of land in a section, such excess or deficiency shall be added to, or deducted from the western and northern parts thereof, as the case may be, hence in your case, the surveyor is correct.

WILL—LIFE ESTATE—HEIRS.

R. S. L., a Wisconsin Subscriber.—A owned property in Wisconsin valued at several thousand dollars. When his daughter, C, was married she called for her share of the property and it was granted. Later A made his will, giving each of his remaining children $11,000 in land or money, each son getting absolute title to his share, but the shares of B and D, two daughters, were given to them for their lifetimes only and then to their heirs. D has two children, both minors, and B has three living children of full age and one daughter dead, who left a son fourteen years old. About one year ago B sold her land to E, a brother, without having her heirs sign any of the papers. (1) Had she a right to do so, and could she give good title to the brother? (2) Can her heirs recover the land? (3) What steps could an heir take to have the matter investigated without letting the other heirs know about it?

Answer.—(1) B owned only a life estate in the land, and she had a right to sell that interest in it, but no more. The brother who bought it will have good title till B's death, then the land will belong to B's heirs. (2) When B dies her heirs can recover the land, as they will then own it under the terms of A's will. (3) Employ a good reliable lawyer to make an investigation.

Lap the disk one-half when working up the seed bed. Of course, it will take a little longer to do the work, but it will leave the ground smoother, and at the same time, put it in condition equal to that where it is given two separate diskings.

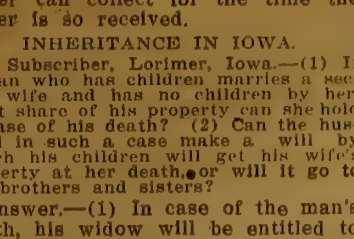
JOHN DEERE IMPLEMENTS

JOHN DEERE MOLINE, ILL.

John Deere Disc Harrows and Corn Planters

This spring pressure harrow pulverizes your soil thoroughly and puts it in condition to grow the biggest crop you ever raised. The extraordinary flexibility of John Deere Disc Harrows due to spring pressure, insures thorough cultivation of your entire field. It leaves small middles and cuts out dead furrows.

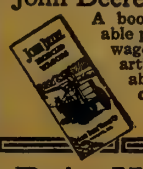


John Deere Wagons

No other implement on the farm is used as much as the wagon. Nothing is more abused. Consequently the wagon should have the quality to withstand this usage.

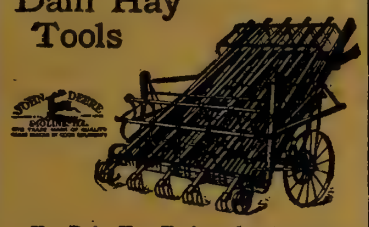
John Deere Wagons are built of oak and hickory—the best material known for wagon making. They stand up under the most severe tests, and give the satisfaction you want.

John Deere Ironclad Wagons



A booklet that gives you valuable pointers on how to buy a wagon, and other interesting articles that you should know about. See lower right hand corner of ad. and see how "to get the books you want."

Dain Hay Tools



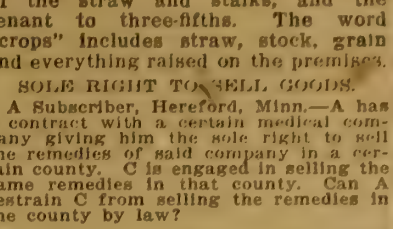
Use Dain Hay Tools and put up your hay quicker, better and more economically than with any other hay tools.

The Dain Hay Loader is easy to operate. Simple construction, few parts, nothing to get out of order. Material and workmanship of the known Dain standard, proven by service to be reliable and trustworthy. Ask your John Deere Dealer about the Dain line.

Dain Hay Loader and Side Delivery Rake tell you about how to use these tools to handle your hay rapidly and economically. Should you want information about other Dain hay tools, tell us which tool you are interested in. See lower right hand corner of ad. how "to get the books you want."

John Deere Corn Planters

The great accuracy of drop is what naturally interests you most. John Deere Planters give the highest accuracy of drop attainable. Repeated tests show ten to fifteen bushel per acre in favor of accurate planting. You profit by the increased yield due to perfect stand, by additional years of service and freedom from break down.



Bigger Crops from Better Seed Beds and More and Better Corn

Two books that will prove a great help to you in the preparation of your land for seed, and the planting of corn.

These books contain valuable suggestions by men who are experienced on those subjects. "To get the books you want," see lower right hand corner of ad.

Davenport Roller Bearing Steel Wagons

Reduces the draft; makes your hauling easy; the roller bearings do that. Haul larger loads, make fewer trips,

save time. Your time is worth money to you.

You do the same work with one horse less; if you now use three horses you will only need two; if you use four, three will do the work.

No repair bills to pay; no tires to reset; the Davenport Roller Bearing Steel Wagon is practically everlasting. The first cost is the only cost.

The steel spokes don't pick up and carry the mud like wooden spokes; they cut through it.

Ask to see the Davenport wagon at your John Deere Dealer's.

When The Going is Hard

Containing twenty-six articles on wagons. Tells you why the dish is put into the wooden wheels and other things you should know about. It is interesting and you'll like it. Lower right hand corner of ad. tells how "to get the books you want."

Better Farm Implements and How to Use Them illustrates and describes the most complete line of farm implements made. Tells when and how to use them under varying conditions—answers questions about farm machinery and is a practical encyclopedia for the farm. It is worth dollars to you. You can't afford to be without it. Write today for "Better Farm Implements and How to Use Them."

W. B. EDDY & CO., Dept. H ALBANY, N. Y.

PROFESSIONAL Veterinary advice through this department to regular subscribers only. We do not answer veterinary inquiries for the benefit of "neighbors." Parties desiring information will be required to send their names in full with their address. No question will be answered by mail unless accompanied by a fee of one dollar. In order that correct information may be given, the symptoms should be accurately described, stating of how long standing, together with color and age of animal, and what treatment, if any, has been resorted to. All veterinary inquiries should be addressed to this office.

SYMPTOMS AND TREATMENT.

SPAVIN.

I have a fine, black mare, eight years old, weight 1,400 pounds. In driving her she became lame in her left hind leg at the hock joint and a small bunch appeared there and still remains. She seems to be lame at times and part of the time she is not lame.

You do not say whether the lump is at the back or low down on the front of the hock. If behind it is a curb, if in the other position it is a spavin. In either case it will have to be blistered after removal of hair, but for spavin it would be best to have the part fired and blistered and then give six weeks rest in stall.

SICK SHEEP.

A ewe took sick and died and the symptoms of her case were very peculiar. She seemed to hang her head and lean up against the side of the shed. She would shiver and shake at times and move her head around as if scared. A greenish saliva ran out of her mouth and she appeared to be blind. After the third day she refused to eat and was sick just one week. Please tell me what this disease is and also a cure for the hacking cough which sheep contract.

Make it a practice always to open a sheep after death to determine cause of death. In such cases as you describe we usually find impaction of the stomach and liver disease, due to the feeding of too much bulky, coarse roughage without laxative or succulent feed. Ewes should have bran, roots or silage, or cabbage and clover hay in addition to oats during pregnancy. Along with the impaction and liver trouble we often find nodular disease of the intestines, due to a parasite, and this and the combination of trouble proves fatal. Nodular disease is incurable. Prevent trouble by feeding in the way we have suggested and make pregnant ewes take lots of outdoor exercise every day. Cough in sheep often is due to stalling them in dirty, badly ventilated barns and sheds. Do away with this cause. Give glyco-heroin in dessert spoonful doses for cough.

DROPSY.

A bay colt two years old got to swelling in the sheath and under the belly from his four legs back not quite to his sheath. He did not seem to be in any misery only when he laid down, then he would breathe hard. I got a veterinarian and he opened the swelling and water ran out. The colt got weak and could not get up alone. He had a good appetite all the time and kept in good flesh. The swelling kept increasing until his neck and fore legs became just as tight as the hide would hold, and the veterinarian opened it again and water kept dropping out until he died. The veterinarian said it was his kidneys and liver at first and later he said it was leakage of the heart. Now I have another colt the same age, with swelling the same way. These colts ran in a stalk and meadow field and I fed them cane the first crop. I would like to know the cause and what to do for the sick colt.

Stop feeding cane hay and substitute mixed clover hay and an abundance of sound whole oats and wheat bran. The dropsical condition denotes general debility and weak heart from inadequate feeding and possibly from blood worms. Mix worm powder in the feed according to directions often given here.

WORMS.

I have about forty head of late fall or early winter pigs that have been running with their mothers in the feed lot. Some sleep at night in the hog house where they were farrowed and the larger part of them sleep in the shed on one side of the barn where the larger or fattening hogs sleep. We try to keep their sleeping quarters bedded well and warm. All the hogs are doing well but these pigs. Some of them are dead now and a good number don't want to come out to eat or drink their swill. They gradually become weaker until they can scarcely get around and seem to want to stay close to the shed. I have noticed that the pigs that sleep in the warmer quarters are in the worst condition. Their hair looks rough and staring and I am inclined to think they have worms. Could you give me a treatment for these pigs?

Cholera may be killing the pigs, in which case you should have the well ones vaccinated. If you think that worms are causing the losses dissolve one dram of sulphate of iron in the slop, once daily for five consecutive days, for each 100 pounds of body weight of pigs and repeat the treatment in two or three weeks. Pen the hogs in lots of five when under treatment.

STRINGHALT.

Have a bay mare six years old weighing 900 pounds. About three months ago she became a little stringhalted in her right hind leg and is growing worse. What can I do for her? Can it be cured with medicine? If so, how? Could a veterinarian operate on it successfully, and if so, how?

Medicine will do no good, but there would be a good chance of recovery could you have the operation of peroneal tenatomy performed by a qualified veterinarian.

MILKLESS MARE.

I have a five-year-old black mare that had her first colt last spring. The colt was alive and all right, but the mare did not have any milk for it and it died. She is in foal again. Will she have milk this time, or will I have to doctor her?

The mare should not have been bred, for she will not be likely to have milk for her foal this spring and doctoring will not produce milk flow. All that can be done will be to give her plenty of nourishing feed and make her take plenty of exercise every day.

PNEUMONIA.

I bought ten young Duroc Jersey brood sows weighing close to 300 pounds the 6th of February. About two weeks after one of them began to cough and wheeze as though she had contracted a bad cold, finally refused to eat, and in a week she died. The hogs have had the serum vaccination. Two others seem to be affected now. Will you kindly tell me a remedy?

The sow probably died of pneumonia due to wet or exposure. The others may have caught cold, or lung worms may be present in these sows and in the one that died. No certain remedy has been found for these worms in swine, but generous feeding usually enables affected hogs to withstand their ill effects. Try effects

Cures While Horse Works

If your horse has sore shoulders or galls you don't have to buy medicine or send for a veterinary to cure him—all that you need to do is to see that when he works he wears

The Lankford HUMANE HORSE COLLAR

$1.25

This collar is well built—stuffed with medicated cotton throughout; remains soft and pliable until worn out, and, if fitted properly, is guaranteed to cure sore shoulders and galls. Can be adjusted to fit any shape neck. Light and cool, easy to put on and take off. The best collars to use for colts or horses just starting to work. Will not sweeny the horse.

FREE Send for our Memorandum Account Book—keep a record of the things you're apt to forget. Sent free on request. Write for it—also particulars regarding Lankford Cotton Filled Horse Collars. Prices $1.25 up. *Trade Mark*

Best for Spraying Trees and Vines—

Don't think because Lewis' Lye owes a large share of its wonderful popularity to its value as a hog conditioner, that it has no *other* important uses on the farm. Fruit growers, gardners, and farmers have used Lewis' Lye as an *insecticide* for years—not merely because it is *cheaper* than paris green or other preparations—but for the simple reason that it is *most effective.*

Lewis' Lye

The Standard for Half a Century

is the only 98% pure lye made by manufacturing chemists. As *such* it may be used with every degree of confidence for spraying fruit trees and vines—destroying potato bugs and other pests.

On The Farm *Or in The Home*

Lewis' Lye is almost indispensable for

—Cleaning —Making Soap
—Disinfecting —Spraying Trees
—Destroying Vermin —Conditioning Hogs
—Softening Water —and all general purposes

Get a can at your grocers and judge the merits of Lewis' Lye yourself. Free booklet describing its uses mailed free. Address

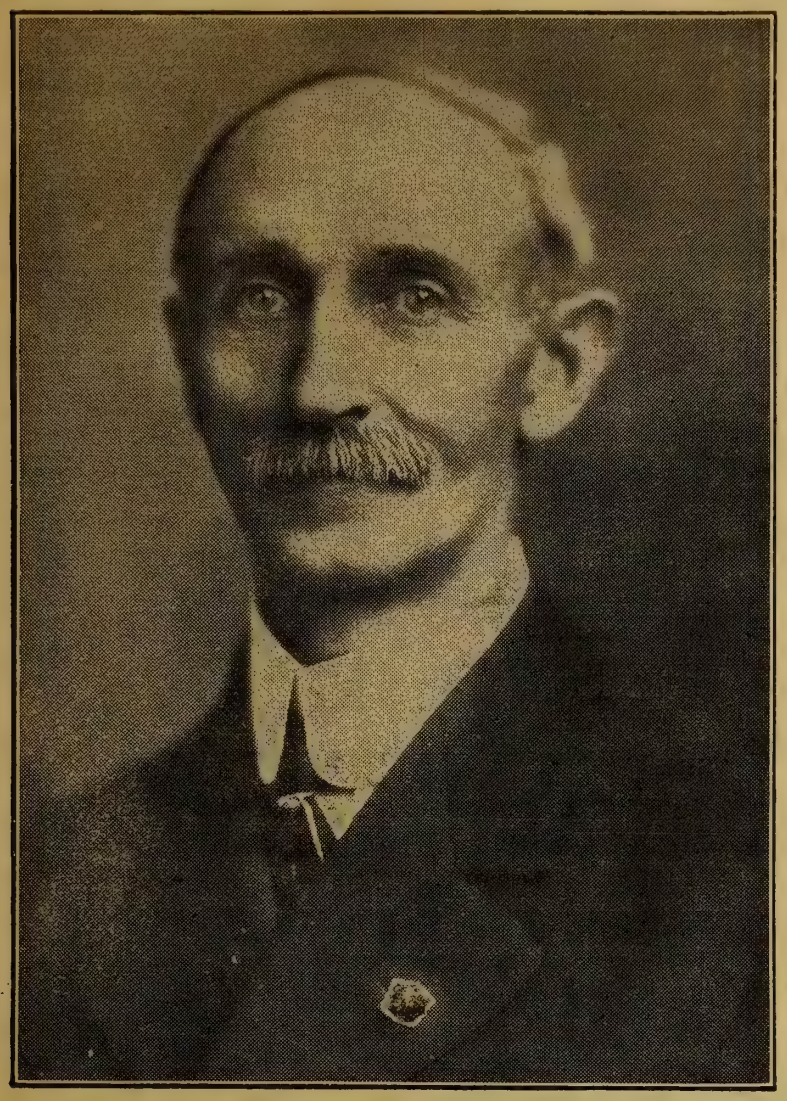
of turpentine mixed in the slop at rate of one teaspoonful for each eighty pounds of live weight. Give it each other day for a week. This treatment should not, however, be given to a pregnant sow.

Stockmen Sketches

MAN proposes, but God disposes," runs the old adage, never better exemplified than in the career of Alexander Galbraith, of De Kalb, Ill., a breeder and importer of horses who has done as much as any other living man to bring the live stock profession up to its present high standard. When Mr. Galbraith was a lad, back in Glasgow, Scotland, he was dedicated by his parents to the commercial world. There were fond dreams of supremacy in business houses, with never a thought in those early days of a career in the show ring and sales ring, the stable and the paddock. But those who planned a business career for the braw young Scot reckoned without their host. When he came to man's estate Mr. Galbraith put the plans of his elders and forebears to naught by coming to America and engaging in the horse breeding and importing business. Scottish commercialism lost a shining light, but the gain was America's and the live stock industry's.



ALEX. GALBRAITH.

Few among the many honored names in the illustrious roll of devoted, conscientious breeders rank higher than that of Alexander Galbraith. Few men have taken a more prominent part in shows and expositions. Mr. Galbraith's high standing is evidenced by the great number of honored positions he has held, with distinction and dignity, in the leading horsemen associations. For six years he was president of the American Shire Association; for eight years secretary of the American Suffolk Horse Association; for seven years secretary, and five years president of the American Clydesdale Horse Association. In addition to all these, he has served as a director of the American Hackney Society and was chosen as one of the directors in the more recently formed organization, the American Pedigree Association, which represents all breeds of live stock. That he has administered his high office in so many associations with honor to himself and advancement to the organizations testifies not only to Mr. Galbraith's administrative ability, but to his conscientious devotion to the honorable career which he has made his life's work.

Before locating at De Kalb, Ill., Mr. Galbraith spent five winters as a member of the Wisconsin Farmers' Institute force and lectured throughout the Badger state on better methods of horse breeding. As a recognized authority on draft horses and as a logical and convincing speaker Mr. Galbraith has been much sought by the agricultural colleges and agricultural associations of the corn belt. In this respect he has made for himself a most enviable "class room" record. There is a special charm about his rich Scotch brogue, one that has always made a strong appeal to the student. His splendid service has been recognized by the Wisconsin College of Agriculture, he having received special honors conferred by that institution for what he has done to improve the horse industry not only of that state, but of the United States.

The career of such a man stands as an object lesson and inspiration to others and so has an indirect, as well as a most direct, bearing upon the present and future of an industry upon which a great part of the nation's wealth and welfare depends.

ANOTHER GOOD HOG-FEEDING RECORD.

To the Editor of The Homestead:

I have been quite interested in the record that some of your subscribers have made in their hog-feeding operations and it has occurred to me that the results of my own work during the last year might interest others. One young sow farrowed six pigs February 11th and forty-three pigs were farrowed in April. As I was anxious to raise fall litters I weaned only my pigs when they were between four and six weeks old. On July 7th they were turned into a twenty-acre cornfield which was then about knee high and they were kept there continuously until Christmas, with the exception of a period of about two weeks after cutting and harvesting my oat crop. This twenty-acre field carried not only this bunch of hogs, but also a flock of lambs while 500 chickens had access to it also. October 23d I sold five of my shoats for $95 and on February 17th I shipped forty-three head and realized $997 for them or $1,092 for the forty-eight head. These shoats never had anything but ear corn and a few oats and the only dope I used was about $1 worth of copperas and sulphur. They averaged 310 pounds when they were ten months old. I might add that they were fed a little ensilage every day after they were taken out of the cornfield.

A. W. Hess.

Pocahontas county

Sloan's Liniment is a necessity to the stock farmer. Can be used for all the common ailments of horses, cattle, hogs and poultry.

"I have just used your Liniment on stifle lameness and had fine results. My horse was perfectly well in a few days."—A. M. BOATWRIGHT, of North Augusta, S.C.

Governor of Georgia uses Sloan's Liniment for Hog Cholera.

Gov. Brown says that he has never lost a hog from cholera, and that his remedy has always been a tablespoonful of Sloan's Liniment in a gallon of slops, decreasing the dose as the animal improved.

SLOAN'S LINIMENT

"I had a horse sprain his shoulder by pulling, and he was so lame he could not carry foot at all. I got a bottle of your Liniment and put it on four times, and in three days he showed no lameness at all, and made a thirty mile trip besides."—WALTER B. ALDERSFORD, of La Salle, Colo., R.F.D. 1.

THE LIVE STOCK MARKET

Union Stock Yards, Chicago, Ill., March 14th.—Bad distribution of supplies and the mistake of crowding the market during the week preceding Holy Week abstemiousness has cost cattle shippers many dollars this week. Chicago has received during the week 48,000 cattle. This is not a big run, although 5,300 in excess of the week previous, and Missouri river markets have also had moderately increased supplies, but it was too many to make possible a retention of last week's good prices and the manner in which it was distributed made conditions the worse, Chicago receiving 26,100 head of her week's crop of 48,000 on Monday, while only 12,500 arrived on Wednesday, the other big day of the week in the Chicago cattle trade. This feast and famine style of marketing resulted in a glut and a bad, costly break, besides adding variously to the cost and difficulty of handling the business. The prompt manner in which supply was shut off following the Monday decline, however, indicates how strongly supply is held in the country and how readily growers suspend loading operations whenever prices are depressed a notch.

Beef steer trade of the week showed its best phases in the early Wednesday trade—its worst at the week-end, when packers, apprehensive of sluggish dressed beef markets the coming week and well fortified from Monday's heavy purchases, were most indifferent bidders. Lenten season influences are now practically out of the way; however, there is nothing particularly bullish in the outlook. Demand for beef ought to pick up after next week, but the trade is keeping an eye open for evidence of an expanding marketward movement of southwestern grassers. A run of fat Texas grass cattle has been forecasted and as feed is abundant down there the forecast is getting some credit. A free movement from that quarter would speedily break prices, as everything makes beef and at present prices that commodity can accumulate fast. Fort Worth, Tex., received its first consignment of fat south Texas grass cattle this week and they sold at $7.55, a record price for grassers on that market.

Quotably, beef steer trade is 15 to 35 cents lower than a week ago. The market has been very uneven, both as to time of sale, different sections of the yards and the various kinds of cattle, but at most times fat handy-weight bullocks have had the call and $8.40 to $8.65 grades have shown less variation in value than other classes. The proportion of ripe, qualitied steers selling at $9 to $9.15 has been small and they are not more than 15 cents lower for the week, but 25-cent declines are most common on plain steers with weight and the low-grade light killers selling between $7.50 and $8.25. A spread of from $7.75 to $8.75 is taking 90 per cent of current receipts, with the bulk of the good fat 1,200 to 1,400-pound steers going at $8.35 to $8.65. Quotations are:

Prime steers, 1,350-1,700 lbs.	$9.00@9.15
Choice steers, 1,250-1,500 lbs.	8.85@9.15
Choice steers, 1,100-1,240 lbs.	8.75@9.00
Good to prime yearlings	8.40@8.75
Medium to good yearlings	8.00@8.40
Common to fair yearlings	7.25@7.90
Good steers, 1,100-1,400 lbs	8.20@8.60
Good steers, 900-1,200 lbs	8.00@8.60
Fair steers, 900-1,200 lbs	7.65@7.90
Medium steers, 850-950 lbs	7.40@7.50

Buyers have taken a deep slash at cow and heifer values this week, and while there is still room for some more wide declines before she stuff can by any stretch of the imagination be called cheap, prices present a pretty ragged appearance when measured against the record rates in force last week. Buyers' assertion that butcher stock has been unreasonably high is not open to dispute, and this week with some little increase in supply and a contracted demand from all sources, good headway was made with the downward revision of the price list. The declines came, for the most, subsequent to the early Wednesday market. Canner cows are least affected, holding within 10 to 15 cents of last week's prices, while the better grades of cutters and medium killers, now selling from $4.85 to $5.65, are closing 25 to 35 cents lower and good to choice fat cows and heifers are easily off as much. At week-end a very good set of fat cows sell at $6.15 to $6.65 and $6.75 to $7.50 takes a choice to prime class as well as good to choice heifers, although a fancy class of fed heifers, such as were selling here a week ago and early this week up to $7.85 to $8.40, is now worth $7.60 to $8.25. Competition from Texas grass cattle is expected to develop sufficient breadth within the near future to work against the restoration of the record prices in vogue last week, but the trade sees prospects of a few weeks of comparatively light receipts ahead, and as the breeding microbe is in the air everywhere, it is not improbable that the Southwest's contribution to market supplies this spring will prove as large as it is being advertised in some quarters. Local receipts are carrying a very generous proportion of plain and medium cows emanating from dairy regions and comparatively very little good corn feds of desirable beef-making strains. Bulls have been in short supply all week and are selling 10 to 15 cents higher, with bolognas making new record sales and going from $6.10 to $6.50 for plain light to good, heavy meaty sorts. A good many good beef bulls have reached $6.75 to $7, and prime have sold upward to $7.40. Anti-Easter demand for calves to supply eastern veal markets for the Easter trade caused 50 cents to $1 advances in veal calves, 75-cent to $1 gains being most general and prime vealers touching $12, a record price. A seasonable expanding marketward movement, hurried by these prices, which have put veal in the list of luxuries, is promised, and minus the urgency of demand for the Easter trade, which has been responsible for this week's big advance, declines are more than probable. Quotations:

BEEF COWS.

Choice to prime fed cows	$6.75@7.75
Good to choice cows	6.00@6.75
Fair to good cows	5.50@6.00
Com. to fair butcher cows	5.00@5.50

CANNERS AND CUTTERS.

Good to ch. heavy cutters	$4.80@5.00
Fair to good light cutters	4.60@4.80
Fair to good canners	4.15@4.45

Good to choice fed heifers	6.65@7.25
Fair to good heifers	6.15@5.65

BULLS.

Good to choice bolognas	$6.30@6.50
Light and medium bolognas	6.00@6.30
Canner and poor light	5.00@5.90
Fair to choice butchers	6.50@6.90

VEAL CALVES.

Good to choice vealers	$11.25@12.00
Fair to good light vealers	10.75@11.25
Strong weight vealers	7.75@ 9.25
Good to choice stock calves	7.00@ 7.65
Inferior to fair hvy. calves	4.75@ 6.25

Stock and feeding cattle buyers have had opportunity this week to lay in supplies at cheaper rates, by virtue of a liberal supply and the lack of strong killer competition for fleshy classes, but when the first blush of green begins to steal over the landscape a recurrence of recent buying activities that have recently kept the trade keyed up to such a high pitch is not at all improbable. Many in the trade believe the present the most opportune time to buy, as better selections can undoubtedly be made than later, as it is not expected current liberal marketings will much longer continue, as thin cattle are always much scarcer and harder to buy near grass time. Some high-qualitied selected steers are selling up to $8.10 to $8.20 to feeders, and they look as high, on paper, as a week ago, but they are very well-fleshed cattle on which country buyers were being regularly outbid by killers last week and which are being taken out for thirty to sixty-day feeds. At $7.85 to $8 a choice class of fleshy feeders and around $7.65 to $7.75 choice steer yearlings are selling. They look 10 to 15 cents cheaper than a week ago. Thinner plain to good qualitied stock and feeding steers are 25 to 35 cents under late last week and such grades of 600 to 900-pound weights are going largely from $7 to $7.60, common light stock steels down around $6.50 to $6.75, and stock and feeding heifers from $5.65 to $6.40. Quotations:

FEEDERS.

Selected, 900-1,110 lbs	$7.80@8.20

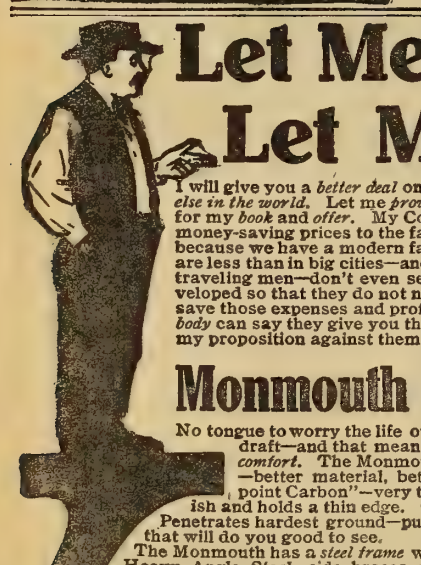
One of the big surprises of the season in the hog trade came on Monday when 68,745 head of hogs reached the Chicago market, making the biggest supply within a period of more than four years. It proved to be merely a "flash" brought out by the establishment of the



Let Me Quote You My PRICE
Let Me PROVE My Quality!

I will give you a *better deal* on a tongueless disc than you can get *anywhere else in the world*. Let me *prove* it to you. Send me your name on a postal for my *book* and *offer*. My Company has made it possible for me to quote money-saving prices to the farmers of this whole country. We can do it because we have a modern factory in a medium size city, where expenses are less than in big cities—and because *we sell direct to you*. We do not have traveling men—don't even sell to dealers. Our machines have been developed so that they do not need to be set up and started by experts. We save those expenses and profits and *give you the benefit* of the saving. *Anybody* can say they give you the most for your money but I'm willing to put my proposition against them all and *let you decide*.

Monmouth Tongueless Disc

No tongue to worry the life out of your horses—no neck weight—no side draft—and that means better work because your horses work *in comfort*. The Monmouth has the greatest Disc Blades ever made—better material, better temper. It's what we call "125-point Carbon"—very tough and hard—takes a splendid polish and holds a thin edge. Cuts like a finely tempered knife blade. Penetrates hardest ground—pulverizes lumps and cuts sod in a way that will do you good to see.

The Monmouth has a *steel frame* with Wood Cushion. The Main Cross Piece is Heavy Angle Steel—side braces are Stiff High Carbon Steel. Square timber through the center acts as a Cushion between side braces—gives it a bit of flexibility—keeps frame from buckling under heavy strain—prevents springing out of shape. Many other features all told about in my new book. Hard Maple, Oil-Soaked Bearings easily lubricated. Forward Trucks make it as easily turned around as a plow. Scrapers held by Coil Spring in just right position to prevent clogging—occasional foot pressure cleans discs in stickiest soil. Furnished with Transport Trucks, Cutaway Discs, Plow Cut Discs—in all sizes.

Direct From Factory
All Freight Prepaid
30 Days' Free Trial
Five Year Guarantee

No neck weight—no side draft. Discs that are *sharp* and *stay* sharp. Wood Cushion that keeps bolts from shearing—prevents frame from springing. Many other features all told about in free book—and the best bargain-price ever made on any disc that approaches the Monmouth Quality.

Just Send Me a Postal Card Now

Remember, I will pay the freight, (or not, as you choose) I will give you 30 days' free trial, 5-year guarantee and a price, direct from factory, that will make you sit up and take notice. Write me. A postal will do. I will also save you money on a plow, cultivator, gasoline engine, cream separator, grain drill, mower, rake and other farm needs. My book tells all. Write for it now. Badger Bottom Makes The Famous 6-Time World's Champion JANESVILLE Turn Furrows Like These

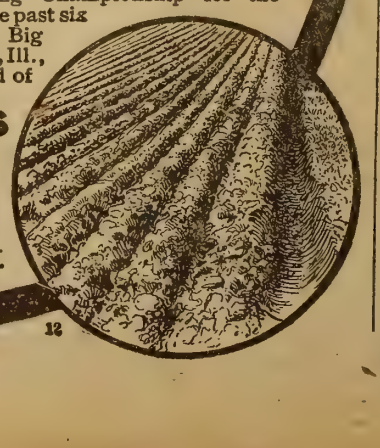
Manufacturers of Farm Implements

PERFECT furrows like these have won the World's Plowing Championship for the Janesville for the past six years. In 1912, at Big Rock and Wheatland, Ill., Janesville won again—with a record of

16 Out of 21 Prizes

—93 percent and 95½ percent for perfect plowing. The Badger Bottom raises the ground **only high enough to turn over on its own corner.** Handles all soils perfectly. Scours in soil that **never before** could be touched with a plow. Many other advantages besides wonderful Badger Bottom. Foot trip horse lift, point first action going into and coming out of soil, simple self-leveling plow, control of bottom in all positions. Many other features all fully explained in our book—sent **free.**



Send Name Now

Read the history of Janesville Plows—how the Janesville won so many World's Championships, how we worked on design of the bottom as well as on many other features.

We also make the famous Janesville Walking Plows, Riding or Walking Cultivators, Disc Cultivators, Disc Harrows and Corn Planters. We will be glad to send you all the Janesville books you request, free. Address postal or letter now. Mail it today.

31 Center Street, Janesville, Wis.

12

9-cent quotation on last week closing session and by reason of the storm of the week previous having prevented shipments from some sections. That the supply was needed is well indicated by market conditions, eastern shippers taking 19,500 and lights being within 5 to 10 cents of last week's best closing prices, while packing grades were only 15 cents lower and closed strong. Receipts have since been light and the market has steadily advanced, reaching today the highest average basis of the season with a $9.12½ top and an $8.80 to $9 bulk, or about a 15-cent higher basis than a week ago. Packers are beginning to realize that holding down hog values is a hopeless task. The big houses need more hogs the worst way and are no longer drawing mental pictures of a bargain counter to be subsequently erected. Instead of holding hogs back, growers have been feeding them into the market hopper right along, and the surplus predicted has existed only in the imagination of Packingtown. When oats seeding time and the rush of other spring farm work arrives more pyrotechnics are expected to be shown in the trade. Today's quotations:

Bulk of sales	$8.80@9.00
Mixed, 215-250 lbs	8.75@8.85
Mixed, 170-200 lbs	8.90@9.00
Medium weights	8.85@8.90
Light butchers	8.95@9.05
Heavy butchers	8.85@8.95
Light shipping	9.00@9.12½
Heavy shipping	8.85@8.95
Heavy packing	8.55@8.75
Rough heavy packing	8.40@8.55
Throwout packing sows	8.00@8.40
Fair to choice light	8.85@9.10
Light-light, 125 to 165 lbs.	8.80@9.05
Pigs, good to fancy	8.25@9.00
Pigs, inferior to fair	7.25@8.20
Boars, poor to good	4.00@5.00
Stags, subject to dockage.	8.80@9.30

Week's trade in sheep and lambs has been very irregular and uneven. Light lambs have been seasonably popular, more so than usual even at this anti-Easter period, because of the entire absence of spring lambs of the new crop and because of the unusually large percentage of heavy lambs in the run. Culls and good 60 to 70-pound lambs are selling as high as a week ago, the best 75 to 90-pound weights are closing 10 to 15 cents lower and heavy lambs a full 25 cents lower. Wethers and yearlings have sold irregularly, but are averaging about steady, while fat, tidy-weight ewes—a very scarce commodity—show 10 to 15-cent advances. Thus far very little shorn stuff has shown up, but warm weather of the past week has decided many holders of stock that need a longer feeding period to shear before marketing. Dressed lamb trade at big eastern distributing centers is closing nearly 1 cent per pound lower than a week ago, creating doubt in the ranks of sellers as to the ability of the market to hold prevailing prices during the coming week. There is no liberal supply pressing on the market just now, but certainly no big crop is needed.

Quotations below are for wooled stock:

Lambs, good to prime handy.	$8.65@9.00

PROF. E. R. BENNETT JOINS ROCK ISLAND STAFF.

To the Editor of The Homestead:

Prof. E. R. Bennett, horticulturist of the Colorado Agricultural College and Experiment Station, has been appointed horticulturist for the Rock Island lines and began work March 12th.

Professor Bennett has made a marked success in raising and marketing fruit and vegetables in three states having very different conditions—Colorado, Connecticut and Michigan. He is the best authority in the United States on potatoes. His best efforts will be given to building up fruit, berry, melon and potato growing throughout the territory served by the Rock Island lines in fourteen states. Professor Bennett graduated from the Michigan Agricultural College, paying his way by working in the forcing houses, gardens and orchards. He was also instructor in pruning and grafting.

His first commercial work was with a large Michigan peach orchard, where by special methods of pruning, grading and packing he secured a net of $1.80 a bushel. Peaches from other orchards sold for $1. He took charge of a large, old, neglected apple orchard and put it in such shape that the fruit on account of its superior size and quality sold for double the market price. Professor Bennett was on the staff of the Michigan Inspector of Orchards and Nurseries and cleaned up the San Jose scale in a large number of orchards and nurseries.

For three years he was with the Connecticut Agricultural College, working with fruit and truck crops, sometimes having fifteen men working under him. His first demonstration was made in the great peach orchards of J. H. Hale. Besides fruit he made a specialty of melons, tomatoes and potatoes. In many fields he doubled the yields.

For seven years Professor Bennett has been with the Colorado Agricultural College, three years of that time being given entirely to the development of the potato industry. He induced many farmers who were getting from $20 to $40 an acre from other crops to plant large tracts of potatoes, thereby getting an average return of $65 to $150 an acre.

For the past four years his work in Colorado has been to develop orcharding and the growing of berries and vegetables, particularly cabbage, cauliflower, celery and onions. He has secured a return of $1,000 an acre in a single season from celery. He has paid special attention to the market end of the business.

BETTER LUMBER For Less Money—Buy Direct

PETER J SEIPPEL OVER HEADS OF MIDDLEMEN MR FARMER

LINE YARD AGENTS

There's a long string of middlemen between you and the mill and every one adds his profits to the price of your lumber. The retail dealer in your town is only *one* of them. You can't see the others but they're all there, adding to the *cost* of your lumber without adding to its *quality* or quantity—making you pay *more for low grade stock.*

STOP this loss. **Go over the middlemen's heads**—buy direct from our mills and **get all that you pay for.**

And remember—Quality is as important to you as price. A house built with poor stock is labor and money wasted. Every piece of lumber you buy from us is clean, new, high-grade stock. *Guaranteed* to be up to standard of specifications or better. It is not picked-over lumber. No local Line Yard can give you our quality of lumber at our price, because their stock is limited and they do not get it at first hands.

Our enormous supply—the biggest in the middle west—enables us to give you exactly what you want, in size and quality. **No substitutions** which make your lumber **cost you more in cash and labor.**

THESE ARE POINTS TO REMEMBER

You'll be surprised how much money we save you even on the smallest orders. **YOU TAKE NO RISK.** We guarantee every item of every shipment to be satisfactory, or it may be returned at our expense and your money refunded.

If you buy as much as a car load **WE'LL REFUND YOUR RAILROAD FARE BOTH WAYS.** Come and pick out what you want in our big yards.

Lumber is advancing. Buy now before the advance, for all your spring, summer and fall building. Send us list of what you need and let us quote you.

DUX-BAK ROOFING *A ready roofing of the highest grade, at an underselling price. Note these prices and long guarantee periods:*

1 ply, 35 lbs. to sq. only $1.15 a sq. *Guaranteed 5 Years.*
2 ply, 45 lbs. to sq. only $1 40 a sq. *Guaranteed 10 Years.*
3 ply, 55 lbs. to square only $1.70 a square. *Guaranteed 15 Years.*

OUR 1913 MODEL STANDS FOR QUALITY EFFICIENCY AND SERVICE

EXPERIENCE CONCENTRATION PERSEVERANCE

In these three words lies the key to the success of the "Flour City" Tractors. The result of fourteen years' specialization, continually concentrating on improvements of mechanical design, has made the "Flour City" what it is today.

The 1913 "Flour City" surpasses all previous models in mechanical efficiency. It embodies all the desirable features that enter into the construction of a successful farm tractor. Its development has been guided by the requirements outlined by the progressive farmer, along the most conservative lines. Its reputation is of the character that comes through actual work in the field.

Look up the records of the "Flour City" before placing your order: it is the best buy on the market today. Built in three sizes—20, 30 and 40 H. P.

KINNARD-HAINES CO., 857 44TH AVE. NO., MINNEAPOLIS, MINN

POULTRY DEPARTMENT

THIS department is edited by a competent poultryman, who will be pleased to answer questions concerning diseases, poultry management, etc., when they can be answered through the department. Questions will not, however, as a rule, be answered by mail, and stamps need not, therefore, be enclosed with inquiries. Address all letters relating to poultry topics to this office.

TRAP-NESTING.

To the Editor of The Homestead:

This communication was sent to me by a poultry man in northern Wisconsin, relative to some quotations about trap-nesting:

Be sure to read this, as it seems to knock the trap-nesting theory "into a cocked hat." If I mistake not I think I have read articles from your pen supporting that theory and practice. It seems to me I can see one good reason supporting these conclusions, viz.: A hen laying 200 eggs a year will meet such drafts on her reproductive system that she will not transmit to her offspring her own vitality and characteristics as a hen will that lays fewer eggs. Hence a 200-egg hen is not very likely to be the mother of a 200-egg daughter. The law of heredity breaks down. Am I right? If you poultry doctors can't agree, you will get us laymen "wool-gathered." But we're all here to learn and experience is our teacher. The main thing is to have a good motive.

This criticism was given, and received, in the right spirit. It takes many different people to bring out the right ideas. The writer of the above referred to an experiment at the Maine station where a lot of hens were trap-nested with the intention of selecting the best-layers, as foundation stock and breeding only from these until a flock of hens that would average 200 eggs each was produced.

After this experiment was well under way only male birds whose dams had a record of 200 or more eggs were used. This was continued for nine years, with the result that the record was lowered each year. Similar tests have been carried on at different experiment stations with the same lack of success in the increase of egg production.

I have never taken a particle of stock in the great wave of enthusiasm about the average farmer, which practically means the farmer's wife, trap-nesting a farm flock. This proceeding would mean that the flock must be yarded, cared for and the nests visited hourly, or oftener, by a woman who must do all her own house work, be the gardener through the busy season and all the incidentals that fall to the lot of the average farm woman. It is easy to know which is which and who is who in poultry write-ups and you can safely wager that no working poultry woman ever advised trap-nesting a farm flock, this in view of the fact that 95 per cent of the whole poultry output is raised by these selfsame women.

I do not wish to be understood as putting the trap-nest theory to the bad. It has its mission and it is a good one. The element of value in a fowl cannot be shown, because it is an invisible quality, except by the trap-nest. Point out any man who has made a success of producing commercial eggs and you will find a poultry keeper who has bred his own birds, year after year, until his flock reflects his idea of what they should do in egg production. He has bred his birds to have a tendency in the right direction. This tendency becomes stronger, and the birds are bound to reproduce their distinctive qualities in the offspring. Only for this, the domestic fowl would be laying just enough eggs for reproduction, as did her prehistoric ancestors.

It is true that not every hen will transmit her tendency to lay to her descendants; also is it true that in a few isolated cases a hen never lays an egg. These are exceptional cases and due to some individual characteristic.

The most probable cause for failure in poultry is the lack of stamina in the flock. This lack of snap and go may be brought about in many ways. In the method of housing, wrong feed, poor foundation stock, and by no means least, the growing of the young stock. Too often experiments are conducted on limited quarters where the chicks must grow in partial confinement. To carry them safely through life, chickens, as well as boys, need unrestricted range where they can run and grow a lot of bone—good hard bone—and muscle and where they must needs breathe pure air. It is possible to produce more eggs from yarded, yes, and trap-nested fowls than range stock, but bear in mind that I do not want them to be grown in limited quarters.

If all eggs from the hens in question were used for incubation, it is not to be wondered if the succeeding generations showed up weak and anemic. After a hen has produced her weight in eggs many times, she is a run-down machine and must rest. After the first few eggs a hen lays we get the strongest chicks from the beginning of her laying period when she is in full flesh and vigor. This vitality gradually wanes and at the

Uncle Sam's Poultry Book

is the greatest chicken book printed. None other like it. Written by the government experts, and gives all the secrets of the business they have learned from years of experience. SAVES HER LITTLE CHICKS.

Dear Sir: For the benefit of your readers you may print the following. "I have been in the poultry business for years and have lost thousands of incubator chicks from bowel trouble or White Diarrhoea. Three weeks ago, I sent 50c (M. O.) to the Walker Remedy Co., U. 4, Lamoni, Iowa, for a package of their Walko Remedy, and since using it have had splendid success. Raised over 90 per cent and lost only a few from bowel trouble. Never had such a thrifty flock of the little downy fellows. If more poultry raisers knew of this remedy there would not be so much loss from that dread disease, White Diarrhoea.

Mrs. J. L. Shoemaker, Lucerne, Kan.

White Plymouth Rock Eggs and ckls. for sale; good scored stock. Write for prices. Mrs. E. C. Turner, R. 1, Griswold, Iowa.

end of three months strong chicks are not to be relied on.

If the busy house wife desires to improve her flock by trap-nesting, a few choice hens of her flock may be yarded and the trap-nest used to advantage in producing cockerels for the range flock, thus breeding up. However, it is possible to buy new stock each year from a heavy-laying strain, cull out the drones and there will be a noticeable improvement.

Minnie G. Stearns.

The last act of James Wilson as secretary of agriculture was to reinstate C. G. Elliott as chief engineer of drainage investigation in the department of agriculture. Mr. Elliott was dismissed by Secretary Wilson for his attitude in the department of agriculture's connection with the Florida everglades investigation. A congressional committee vindicated him.

POINTERS.

—C. Klaus, Manchester, Iowa, has Buff Orpington eggs for sale. His advertisement appears elsewhere in this department.

—Single Comb Buff Orpington eggs are offered for sale by Alfalfadell, Farnam, Neb., in the advertisement appearing elsewhere in this department.

—"I have been raising White Plymouth Rocks for several years," writes Mrs. A. F. Peterson, Red Oak, Iowa, in furnishing copy for her advertisement found elsewhere in this department. "My flock is headed by birds scoring 92½ to 93¾. They are pure white and healthy, farm-raised stock. I breed White Plymouth Rocks exclusively."

—We desire to call the attention of Homestead readers to the advertisement appearing elsewhere in this department of J. M. Detwiler, Dunlap, Iowa, in which he is quoting prices on Barred Plymouth Rock eggs. Mr. Detwiler has two pens from which he will be able to supply eggs this season. He will guarantee a good hatch.

—Look up the advertisement of Fred Post, Moulton, Iowa, that appears elsewhere in this department. He is offering for sale eggs from extra large, high-scoring, first-prize-winning Barred Plymouth Rocks, Pekin ducks and White Holland turkeys. Homestead readers wanting large size and frame should order of Mr. Post a few sittings of his matings.

—E. A. Kauffman, Lockridge, Iowa, under their proper classifications in this department of The Homestead, is offering Houdan and Single Comb Brown Leghorn eggs for sale and fawn and white and pure White Indian Runner duck eggs. We suggest that Homestead readers wanting anything of this kind should consult the advertisements referred to.

—Under the duck heading in this department of The Homestead will be found the advertisement of Mrs. Howard Niswander, Kinross, Iowa, offering eggs from her high-scoring flock of fawn and white Indian Runner ducks. There will also be found under the Orpington head Mrs. Niswander's advertisement offering Single Comb Crystal White Orpington eggs for sale.

—K. Hemmen, Blairsburg, Iowa, in sending copy for his advertisement found elsewhere in this department, writes: "I have a fine flock of the champion laying strain of Indian Runner ducks. They have been laying since February 1st. They are all young ducks, hatched last July. I can please Homestead readers who are in the market for heavy layers and good stock."

—W. W. Baskerville, Earlville, Iowa, in furnishing copy for his advertisement offering Black Langshan cockerels and eggs for sale, that appears elsewhere in this department, writes: "I have a fine flock this year of about sixty extra fine, large hens and pullets. They are a nice, glossy black and mated with four extra good, large-boned cockerels, two of which score 94, and I am offering the eggs at bargain prices."

—In furnishing copy for her advertisement offering Rose Comb Rhode Island Red eggs for sale that appears elsewhere in this department, Mrs. S. J. Marsh, Knoxville, Iowa, writes: "I have a fine flock of clean, healthy, well-selected stock. I have never had the roup on the farm and feel proud of my stock. I hatch and raise my stock with hens and believe they are stronger and more vigorous for breeders."

—A. C. Binnie, Alta, Iowa, has a carefully selected flock of White Plymouth Rocks from which he will furnish eggs
